SECTION 1 OPERATION

The BVP-5P is a compact and lightweight color video camera with a three-chip CCD (Charge Coupled Device) solid state image sensor. When the BVP-5P is used together with a BVV-1PS/BVV-1APS portable video cassette recorder, a Betacam system BVW-105P for ENG (Electronic News Gathering) is created, making it possible for camera recording to be done by a single person.

When a CA-3 camera adaptor (optional) is used together, the BVP-5P can be used as a portable camera.

1-1. OUTLINE

Adoption of CCD

Incorporation of CCDs results in a more compact and lightweight camera body and less power consumption than a camera using pick-up tubes. The camera life is elongated, and the following characteristics can also be obtained.

- Low lag, high resistance to image burning and low geometric distortion.
- The CCD is not affected by vibration and mechanical shock.
- The CCD imager is not influenced by terrestrial magnetism.
- Thanks to the high signal-to-noise ratio, the video output level can be raised by 9 dB or 18 dB to obtain a clear picture under low light conditions.
- No registration adjustment is required.

Compact and lightweight

The magnesium diecast body is light and rigid. The compact design and lightweight makes the BVP-5P easy-to-operate camera.

High sensitivity

The video output level can be raised by 9 dB or 18 dB. Even at the 18 dB position, a high quality picture is assured so that the recording under low light conditions will be possible.

The automatic white balance and black balance/preset white balance

The white balance and black balance can be automatically adjusted at each filter position, and the adjusted value can be kept in the memory A and B even when the power is turned off.

The memory A and B stores the adjusted value at each filter position separately so that up to 8 values can be stored. When the WHITE BAL switch is set to PRESET, a white balance at about 3200° K is obtained.

Warning system

If there is a problem on the VTR or the tape, or if the battery is to end, the warning lamps in the viewfinder indicate it. When the BVP-5P is used together with the BVV-1PS/BVV-1APS, the warning sound is heard and the tape remaining time indicators in the viewfinder will function.

Character display function

The setting of switches, the items and conditions of automatic adjustment and the steps of self-diagnosis can be displayed on the viewfinder screen.

Auto-close mechanism

The lens is automatically closed in the following cases.

- When the CAMERA/VTR power switch is set to PREHEAT
- When the OUTPUT (DCC) selector is set to BARS
- While the automatic black balance adjustment is being performed
- When the test signal is output

In addition to the above, the BVP-5P has the following features.

- Low power consumption
- Wide dynamic range to accept excessive light input of up to 5 times that of normal condition with the incorporated DCC (Dynamic Contrast Control) circuit
- Gen lock function when the CA-3 camera adaptor is used
- Time-code gen lock function when the BVV-1APS is used
- 2 line image enhancer
- Shading compensator to use the lens extender
- High color resolution with the detail circuit mixing the R and G signals
- Test saw signal generator
- Masking circuit
- Sharp-directional microphone
- Automatic iris adjustment mechanism
- Video level indicator
- Adjusting the audio recording level of audio channel 1
- Zebra pattern ON/OFF switch
- Attaching an external microphone
- High resolution viewfinder
- The viewfinder can be moved right and left so that you can see the viewfinder with a left eye as well as with a right eye.

1-2. LOCATION AND FUNCTION OF PARTS AND CONTROLS

1 Viewfinder fixing ring

To position the viewfinder, loosen this ring, slide the viewfinder right and left, and fasten this ring.

2 BRIGHT (brightness) control

Adjusts the brightness of the viewfinder screen. To obtain a brighter picture, turn this control clockwise. This control does not affect the output signal of the camera.

3 CONTR (contrast) control

Adjusts the contrast of the picture on the viewfinder screen.
This control does not affect the output signal of the camera.

4 TALLY/ZEBRA ON/OFF switch

ZEBRA/TALLY: The zebra pattern and tally lamp are turned on.

OFF: The zebra pattern and tally lamp are turned off.

ZEBRA: The zebra pattern is turned on, and the tally lamp is turned off.

5 FILTER selector

Select the appropriate filter according to the lighting conditions.

Filter number	Color temperature	Lighting conditions
1	3200°K	sunrise, sunset, in a studio
2	5600°K + 1/4ND*	bright outdoors
3	5600°K	cloudy or rainy outdoors
4	5600°K + 1/16ND*	clear and bright scenery of snows, high mountains or seaside

* ND: neutral density filter

6 CAMERA/VTR power switch

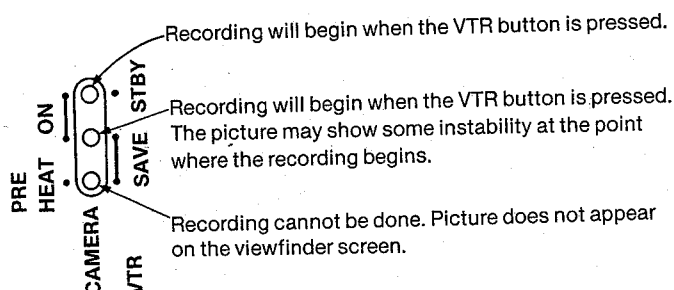

Turns on and off the power to the camera and the video cassette recorder.

CAMERA-PREHEAT: Power is supplied only to the heater of the picture tube in the viewfinder but the picture does not appear on the viewfinder screen. The power consumption is reduced at this position.

CAMERA-ON: The power is supplied to all part of the camera and the picture appears on the viewfinder screen.

VTR-SAVE: The head drum stops rotating and the tape is unthreaded. Because the power consumption is reduced at this position, the recording time will be longer.

VTR-STBY: The head drum starts rotating and the tape is threaded around the drum head.

7 GAIN selector

Generally set this selector to "0". When the selector is set to "9" or "18", the video output level will be raised by 9 dB or 18 dB respectively.

By setting the switch on the built-in circuit board, the video output level can be raised by 24 dB at the 18 position. For details, refer to section 2 and followings.

8 OUTPUT (DCC) (Dynamic Contrast Control) selector

Selects the signal fed from the VTR connector 12, TEST OUT connector 17 and to the viewfinder.

CAM: Signal picked up by the camera.

At the DCC ON position, the built-in DCC circuit functions.

When the DCC circuit is not used, set the selector to DCC OFF.

BARS (DCC OFF): Color bar signal. Set at this position to use the color bars to adjust the video monitor or to record the color bars. When the BVP-5P is used together with the BVV-1PS/BVV-1APS, the I, Q signals do not appear on the screen.

To change the character display mode, use this position.

9 WHITE BAL (balance) switch

PRESET: The white balance is set at the factory to the value of about 3200°K with the FILTER selector 5 set to "1", the white balance of the iodine lamp. Use this position when you have no time to adjust the white balance.

A, B: When the AUTO W/B BAL switch 25 is set to WHT, the white balance will automatically adjusted and stored in the memory A or B according to the setting of this switch. After the adjustment, the memorized white balance value is always obtained at these positions.

10 Light shoe

Attach a video light, etc.

11 VTR mount

Mount a BVV-1PS/BVV-1APS portable videocassette recorder, CA-3 camera adaptor, etc.

12 VTR connector (50 pin)

Connect the 50-pin connector of the BVV-1PS/BVV-1APS videocassette recorder, CA-3 camera adaptor, etc.

13 Tripod mount

Attach the tripod adaptor (supplied) here, and attach the camera to the tripod.

**14 Eye cup**

The eye cup can be removed, and the viewfinder screen can be seen directly.

15 Viewfinder stopper

To remove the viewfinder from the camera, pull this stopper up, and remove the viewfinder.

16 PEDESTAL control

Adjusts the pedestal level.

17 TEST OUT connector (BNC type)

The signal selected by the ENC/REGI selector **28** is fed from this connector. When the encoded signal is to be output with the selector set to ENC, be sure to terminate this connector. Or the encoded signal will not be output.

18 LENS connector (12 pin)

Connect a cable of the lens.
For details on the usable lenses, consult your Sony personnel.

19 Tally lamp

This lamp lights or blinks when the REC lamp on the viewfinder lights or blinks. This lamp functions when the TALLY/ZEBRA ON/OFF switch is set to ZEBRA/TALLY position.

20 Eyepiece focus control

Adjust this control so that the clearest picture can be obtained on the viewfinder screen.
This control does not affect the output signal of the camera.

21 AUDIO/FILTER switch *

AUDIO: Use this position when the recording level of audio channel 1 is adjusted by the AUDIO CH-1 control. The FILTER/AUDIO indicator in the viewfinder shows the audio recording level.

FILTER: The FILTER/AUDIO indicator in the viewfinder shows the number of the filter selected by the FILTER selector.

When the camera is used together with the BVV-1PS/BVV-1APS with the serial No. 49999 or lower, be sure to set the switch to this position.

22 AUDIO CH-1 (audio channel-1 recording level) control *

When the AUDIO CH-1 MANU/AUTO switch on the BVV-1PS/BVV-1APS is set to MANU and the AUDIO/FILTER switch **21** is set to AUDIO, the recording level of audio channel-1 can be adjusted manually. Adjust the level during observing the FILTER/AUDIO indicator in the viewfinder.

23 PEAKING switch

The outline of the picture on the viewfinder is enhanced so that the focus can easily be adjusted. Every time the switch is pressed, the function is turned on and off alternately.

24 Lens fixing lever

After attaching the lens to the lens mount, fasten this lever to fix the lens.

25 Lens mount (special bayonet type)

Attach the lens.

26 AUTO W/B BAL (automatic white/black balance adjustment) switch

WHT: For automatic white balance adjustment, set the WHITE BAL switch to AUTO and set this switch to WHT. The adjusted value will be automatically memorized.

To change the character display mode, set this switch to WHT after setting the OUTPUT (DCC) selector to BARS. Every time the switch is set to WHT, the mode is changed cyclically.

To check the BVP-5P using the self-diagnostics, set this switch to WHT, and the step for self-diagnostics advances one by one.

BLK: For automatic black balance and black set level adjustment, set this switch to BLK. The adjusted value will be automatically memorized.

- The switch automatically returns to the center position when it is released after setting the switch to WHT or BLK.

27 VTR START button

Press to start recording. To stop, press this button again. This button functions the same as the VTR button on the lens.

28 ENC/REGI selector

Selects the signal fed from the TEST OUT connector **17**.

ENC: The encoded signal (VBS) of R, G and B signals

REGI: Signal selected by the R/OFF/B selector **30** and G/OFF/-G selector **29** (R, G, B, R-G or B-G signal)

29 G/OFF/-G selector

The signal fed from the TEST OUT connector is selected when the ENC/REGI selector **28** is set to REGI.

G: G (green) signal

OFF: The G signal is cut.

-G: -G (phase reversed green) signal

30 R/OFF/B selector

The signal fed from the TEST OUT connector is selected when the ENC/REGI selector **28** is set to REGI.

R: R (red) signal

OFF: The R and B signals are cut.

B: B (blue) signal

* These switch and control are not effective when the BVP-5P is used together with the BVV-1PS with the serial No. 49999 or lower.

Indicators in the viewfinder

Tape remaining time indicators

Show in minutes the amount of tape remaining for recording. These indicators function only when the BVP-5P and the BVV-1PS/BVV-1APS are directly connected with the 50-pin connectors.

REC (recording) indicator (red)
Lights during recording, and blinks when one of the warning lamps on the BVV-1PS/BVV-1APS blinks or lights. For details, refer to the instruction manual furnished with the connected VTR.

BATT (battery) indicator (red)
The indicator starts blinking several minutes before the battery is discharged to the level which cannot perform the operation of the camera, and keep lighting at that level.

W/B CENT (white balance/black balance) indicator (orange)
Lights when the automatic white balance and black balance adjustment has been completed and goes off after 5 seconds. If the automatic adjustment cannot be done, the indicator blinks for about 5 seconds.

GAIN UP indicator
Lights when the GAIN selector is set to "9" or "18".

FILTER/AUDIO indicator
When the AUDIO/FILTER switch is set to AUDIO, the audio level is indicated. When the switch is set to FILTER, the number of the filter selected by the FILTER selector lights. (For details, refer to "Manual audio recording level adjustment" on page 1-36.)

Tape remaining time indicators and the remaining time

These indicators function only when the BVP-5P and the BVV-1PS/BVV-1APS are directly connected with the 50-pin connectors.

Remaining time	20	15	10	5	2	0 (minutes)
Indicators	10M 5M	10M	5M	5M		
REC indicator	REC				REC*	

: Blinks in 1 Hz interval
* : Blinks in 4 Hz interval

1-3. SET-UP

1-3-1. Set up with the BVV-1PS/BVV-1APS VTR

The following shows an example of how to set up the BVP-5P and the BVV-1PS/BVV-1APS portable videocassette recorder. To set up the BVP-5P with another unit, refer to the instruction manual furnished with the unit. Use the grip of either the BVP-5P or the VTR. The unused grip should be removed first.

When the grip of BVP-5P is used

- 1 Remove the grip and shoulder pad of the VTR.

- 2 Attach the supplied screws to the holes where the grip was attached.

3 Attach the VTR to the camera.

4 Fasten the screws (supplied with the VTR) securely.

When the grip of the VTR is used

- 1** Remove the grip of the BVP-5P.

- 2** Attach the cover (supplied) to the screw holes of the grip.

3 Remove the shoulder pad of the VTR.

5 Fasten the screws (supplied with the VTR) securely.

4 Attach the VTR to the camera.

1-3-2. Lens Attachment

- For the details on the lens, refer to the instruction manual furnished with the lens.

1-3-3. Tripod Attachment

1-3-4. Shoulder Strap Attachment

1-4. POWER SOURCES

The power is supplied from the unit connected to the 50-pin connector on the BVP-5P. Please refer to the instruction manual furnished with the unit connected to the 50-pin connector.

1-5. CONNECTIONS

The BVP-5P can be used as follows besides being directly connected to the BVV-1PS/BVV-1APS with the 50-pin connectors.

Connection with the BVV-1PS/BVV-1APS by using the connecting cable

- The VA-1VP VTR composite/component adaptor can be connected in the same way.
- A Betacam series portable videocassette recorder such as a BVW-25P can also be connected using the CCZ cable.

Connection with a conventional portable VTR

- When the power is supplied from the VTR by using a camera cable of 10 meters long, the picture quality after the BATT indicator in the viewfinder starts blinking is not guaranteed.

Connection with the AC-500CE

- When the AC-500CE is connected to the VTR with a 4-pin cable, the power will be supplied to the VTR.

1-6. ADJUSTMENTS

1-6-1. White Balance and Black Balance Adjustments

- 1 Set the FILTER selector to the position corresponding to the lighting conditions.

- 2 Set the switches as illustrated.

- 3 Place a white pattern under the same lighting conditions as those under which the recording will be made, and zoom up on a pattern.
A white object such as white cloth, white wall, etc. can be used instead of the white pattern.
The minimum white area required for adjustment is as follows.

- 4 If the automatic iris is not equipped, adjust the iris. If the automatic iris is equipped, set the iris auto/manual switch to auto.

- 5** Set the AUTO W/B BAL switch to BLK. The switch automatically returns to the center position when it is released. During adjustment, the following characters are displayed on the viewfinder screen.

After several seconds, the black balance is automatically adjusted and the W/B CENT indicator in the viewfinder will light. The adjusted value is stored in the memory. The W/B CENT indicator will go out after about 5 seconds. While the W/B CENT indicator is lit, the white balance adjustment can be started by setting the AUTO W/B BAL switch to WHT.

- The lens closes during adjustment of the black balance.

- 6** Set the AUTO W/B BAL switch to WHT. During adjustment, the following characters are displayed on the viewfinder screen.

After about 1 second, the white balance is automatically adjusted and the W/B CENT indicator in the viewfinder will light.

The adjusted value is stored in the memory, A or B, designated in step 1. The W/B CENT indicator will go out after about 5 seconds.

The white balance and black balance adjustments have been completed.

- The character display can be deleted from the screen. (See "1-9. CHARACTER DISPLAY ON THE VIEWFINDER".)
- When the lighting condition of the subject is changed, adjust the white balance only. Readjustment of the black balance is not required.
- The black balance adjustment is required only in the following cases. Except for these cases, readjustment is not necessary even if the power is turned off.
 - when the BVP-5P is used for the first time
 - when the BVP-5P is used after a long period of non-use
 - when the operating temperature is radically changed
- When the zoom lens with automatic iris is used, the hunting may occur. In this case, adjust the AUTO IRIS GAIN control on the lens. (For details, refer to the instruction manual furnished with the lens.)
- When the AUTO W/B BAL switch is set to BLK, the setting of the GAIN selector is automatically changed and the noise may appear on the viewfinder screen, but this is not a problem. While the W/B CENT indicator is lighting, the next adjustment can be started. In this case, the indicator goes off when the switch is set to the other position, and lights again when the adjustment finished.

When the black balance cannot be adjusted

The display on the viewfinder screen changes to "BLACK; NG", and the following displays will appear. Adjust the black balance again.

Display	Causes
HARD ERROR TRY AGAIN	The reference voltage of adjustment cannot be stored.
OVER FLOW TRY AGAIN	The error between the reference value and the current value is too large to adjust the balance automatically.
TIME LIMIT TRY AGAIN	The adjustment cannot be completed within the defined adjustment times.
IRIS: NOT CLOSED TRY AGAIN	The iris has not been closed.
BOUNCING: TOO LONG TRY AGAIN	The black set cannot be adjusted within the defined period of time.

When the white balance cannot be adjusted

The display on the viewfinder changes to "WHITE; NG", and the followings are displayed. Take a necessary step, and adjust the white balance again.

Display	Causes
LOW LEVEL TRY AGAIN	The video output level is too low. Increase the illumination or set the GAIN selector to the appropriate position.
HARD ERROR TRY AGAIN	The reference voltage of adjustment cannot be stored.
TIME LIMIT TRY AGAIN	The adjustment cannot be completed within the defined adjustment times.
C.TEMP.LOW CHG.FILTER TRY AGAIN	The color temperature is too low. Select the appropriate filter with the FILTER selector.
C.TEMP.HIGH CHG.FILTER TRY AGAIN	The color temperature is too high. Select the appropriate filter with the FILTER selector.

If the W/B CENT indicator blinks

Check that the proper filter has been selected and adjust the white balance and black balance again.

When the WHITE BAL switch is set to PRESET

The white balance at about 3200°K can be obtained when the FILTER selector is set to "1". Adjust the black balance only by setting the AUTO W/B BAL switch to BLK.

Memorizing the white balance and black balance value

The BVP-5P has the memory function for the adjusted value of the white balance and the black balance. The memory A and B can store the value adjusted at each filter position independently so that up to 8 adjusted values, 4 for memory A and 4 for memory B, can be stored.

Memory A for filter 1

filter 2

filter 3

filter 4

Memory B for filter 1

filter 2

filter 3

filter 4

The memorized value will be retained for about a week after the power is turned off or until readjustment is performed.

- The number of memories to store the adjusted values can be reduced to two, one for A and one for B, by setting the switch on the built-in circuit board. In this case, the adjusted value will not correspond to the selection of the color temperature filter. Refer to section 2 and following.

1-6-2. Black Set Adjustment

The black set is adjusted by the AUTO W/B BAL switch together with the black balance.
For details, refer to section 2 and followings.

1-6-3. Viewfinder Adjustment

The viewfinder can be moved right and left to place the eye cup to the easy-to-see position, or the position so that you can see the screen with the left eye.

1 Loosen the fixing ring.

2 Slide the viewfinder right and left to the desired position.

3 Fasten the ring.

- To install the camera into the carrying case, slide the viewfinder fully to the left seen from the lens side.
- To remove the viewfinder from the camera, loosen the viewfinder fixing ring, and remove the viewfinder while pulling the stopper up.

To remove the eye cup

When the eye cup is removed, the viewfinder screen can be seen directly.

How to remove the eye cup

1 Turn the eye cup ring so that the lines are aligned.

2 Pull out the eye cup.

How to replace the eye cup

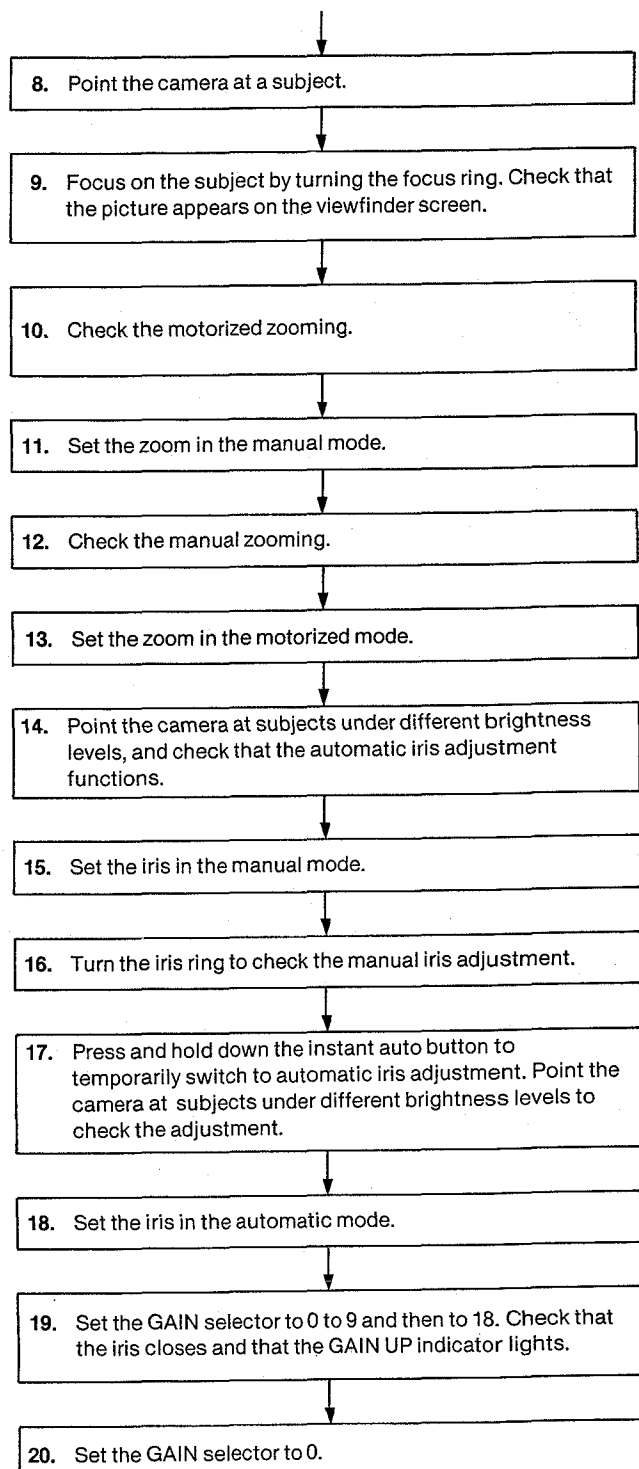

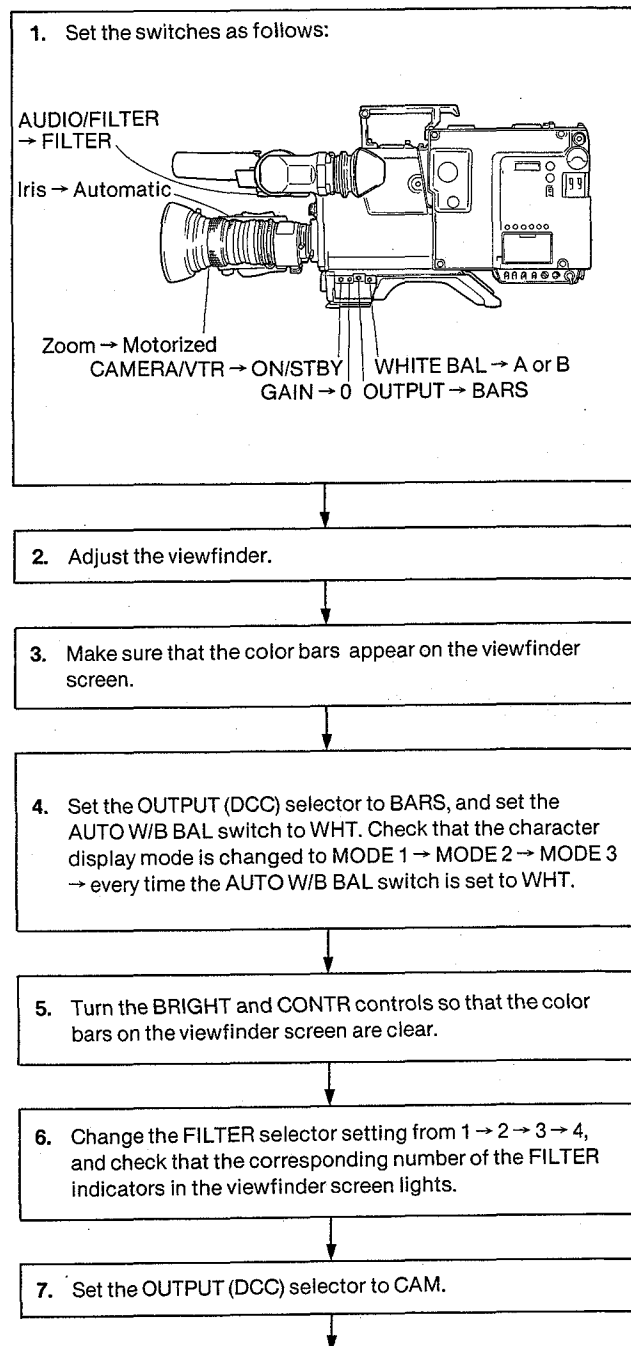

1 Align the line on the viewfinder and the dot on the eye cup, and insert the eye cup into the viewfinder.

2 Turn the eye cup ring until it stops.

1-7. OPERATION CHECKS

The following is an example of operation. For details on operation of the lens, please refer to the instruction manual furnished with the lens.

1-8. OPERATION

1-8-1. Preparations

Before operation, set the switches as follows.

* DCC function

When an object against a background of high luminance such as sky is shot and the output level is adjusted to the object, the output level of the background will be saturated and the background will be blurred. The DCC function will be effective to shoot the background clearly as well as the object. Use this function in the following cases.

- To shoot people in the shade on a fine day.
- To simultaneously shoot the people in a car or in a room and the outdoor subject through a window
- To shoot the scene with high contrast

1-8-2. Camera Recording

- 1 Turn on the power of the camera and the connected equipment.

CAMERA/VTR → ON/STBY

- 2 Insert a cassette tape.

- 3 Select the appropriate filter.

- 4 Adjust the white balance and black balance.
When the white balance and black balance value has been memorized
 Set the WHITE BAL switch to A or B.

When the white balance and black balance value is not memorized but you want to start recording quickly
 Set the WHITE BAL switch to PRESET and set the AUTO W/B BAL switch to BLK. The white balance and black balance at about 3200°K is obtained.

To adjust the white balance and black balance

- 1) Set the WHITE BAL switch to A or B.
 - 2) Shoot the white subject.
 - 3) Set the AUTO W/B BAL switch to BLK. When the W/B CENT indicator in the viewfinder lights and "BLACK: OK" appears on the viewfinder screen, the black balance is adjusted.
 - 4) Set the AUTO W/B BAL switch to WHT. When the W/B CENT indicator in the viewfinder lights and "WHITE: OK" appears on the viewfinder screen, the white balance is adjusted.
- For details, refer to "1-6-1. White Balance and Black Balance Adjustments".

- 5 Point the camera at the subject and adjust focus and zoom.

- 6 Press the VTR START button to start recording. The REC indicator in the viewfinder lights during recording.

- 7 To stop recording, press the VTR START button again.

Checking the video level

The zebra pattern will appear on the part of the viewfinder screen where the video level of the picture is 70% (IRE UNIT). For manual iris adjustment, you can use this function for the appropriate setting. The zebra pattern can be disappeared by the TALLY/ZEBRA ON/OFF switch. However when the switch on the built-in circuit board is set to OFF, the zebra pattern cannot be turned on and off with the TALLY/ZEBRA ON/OFF switch. For details, refer to section 2 and followings.

Recording under the insufficient lighting

When the lighting condition is insufficient, "LOW LIGHT" is displayed on the viewfinder screen and the colon blinks. In this case, a clear picture cannot be obtained. Set the GAIN selector to "9" or "18". The video output level can be raised by 9 dB by setting the GAIN selector to 9, and 18 dB by setting to 18. If desired, the video output level can be raised by 24 dB with the selector set to 18 by setting the switch on the built-in circuit board properly. Refer to section 2 and followings.

- Normally set the selector to "0".

1-9. CHARACTER DISPLAY ON THE VIEWFINDER

On the viewfinder screen, the setting of switches, the condition of automatic adjustments, etc. can be displayed.

There are three kinds of character display mode, and the displayed items differ in each mode.

In mode 1, the minimum items are displayed, and in mode 3, the maximum items are displayed. In mode 2, several items are added to the items in mode 1. The selected mode is displayed on the viewfinder screen.

1-9-1. To Change the Character Display Mode

- 1 Set the CAM/BARS selector to BARS.
- 2 Set the AUTO WHT/BLK selector to WHT. Every time the selector is set to WHT, the mode is changed cyclically, 1 → 2 → 3 → 1 →.

The selected mode is memorized for about a week even if the power is turned off. However when the memory is the preset value, mode 3 is automatically selected.

1-9-2. Display of Switch Setting

The setting of switches is displayed one by one for about 3 seconds each when the power is turned on (except the display of GAIN). When the setting is changed, the display also appears for about 3 seconds and then goes out.

x: not displayed

o: displayed

Display	Contents	Mode		
		1	2	3
GAIN: 0 DB	Setting of GAIN selector (0 DB or 9 DB, 18 DB)	x	x	o
DCC: ON	DCC selection of OUTPUT (DCC) selector (ON or OFF)	o	o	o
FILTER: 1	Setting of FILTER selector (1 or 2, 3, 4)	x	x	o
WHITE: PRESET	Setting of WHITE BAL selector (PRESET or A CH, B CH)	o	o	o
0.0K	Color temperature *	x	o	o
WHITE: PRESET	Setting of WHITE BAL selector (PRESET or A CH, B CH)	o	o	o
0.0K	Color temperature *	x	o	o

* The value of color temperature is 1000 times that of the displayed figure, and is an approximate value.

1-9-3. Warning Display

When the conditions for shooting are not satisfied, the following characters are displayed.

Display	Contents	Mode		
		1	2	3
:MEMORY NG (Colon blinks.)	Memory of white balance and black balance is the preset value. Adjust the white and black balance.	o	o	o
:LOW LIGHT (Colon blinks.)	The lighting condition is insufficient, and the video output level is lower than the rated value.	x	x	o

1-9-4. Display of Automatic Adjustments

The characters are displayed for about 5 seconds, and go out.

Display	Contents	Mode		
		1	2	3
WHITE; OP 0.0K	White balance is being adjusted. Color temperature	x	x	o
WHITE; OK 0.0K	White balance adjustment completes.	x	x	o
WHITE; NG LOW LEVEL TRY AGAIN	White balance cannot be adjusted because the video output level is too low. Readjust.	x	o	o
WHITE; NG HARD ERROR TRY AGAIN	White balance cannot be adjusted because the reference voltage of adjustment cannot be stored. Readjust. *	x	o	o
WHITE; NG TIME LIMIT TRY AGAIN	White balance cannot be adjusted within the defined adjustment times. Readjust. *	x	o	o
WHITE; NG C.TEMP.LOW CHG. FILTER TRY AGAIN	White balance cannot be adjusted because the color temperature is too low. Select the appropriate filter and readjust.	x	o	o
WHITE; NG C.TEMP.HIGH CHG. FILTER TRY AGAIN	White balance cannot be adjusted because the color temperature is too high. Select the appropriate filter and readjust.	x	o	o

Display	Contents	Mode		
		1	2	3
BLACK; OP R.BLK SET	Black balance is being adjusted. Adjusting item (Changed to B.BLK SET, G.BLK SET, R.BLK BAL, B.BLK BAL)	x	o	o
BLACK; OK	Black balance adjustment completes.	x	o	o
BLACK; NG HARD ERROR TRY AGAIN	Black balance cannot be adjusted because the reference voltage of adjustments cannot be stored. Readjust. *	x	o	o
BLACK; NG OVER FLOW TRY AGAIN	Black balance cannot be adjusted because the error between the reference value and the present value is too large. Readjust. *	x	o	o
BLACK; NG TIME LIMIT TRY AGAIN	Black balance cannot be adjusted within the defined adjustment times. Readjust. *	x	o	o
BLACK; NG IRIS; NOT CLOSED TRY AGAIN	Black balance cannot be adjusted because the iris does not close. Readjust.	x	o	o
BLACK; NG BOUNCING TOO LONG TRY AGAIN	Black set cannot be adjusted within the defined period of time. Readjust. *	x	o	o

* If "BLACK: NG" or "WHITE: NG" is displayed repeatedly, the inside of the camera should be checked. Refer to section 2 and following.

1-10. SPECIAL CHARACTERISTICS OF A CCD

Smear phenomenon

This may appear when a very bright object is shot.

Patterned noise

This may appear uniformly over the entire monitor screen when the camera is operated at high temperature.

Wavy picture

This may appear when fine stripes, straight lines, etc., are shot. Their images monitored on the screen look wavy.

1-11. PRECAUTIONS

Avoid rough handling or mechanical shock to the camera.

After using the camera

Turn off the power of a equipment connected to the camera.

Operating and storage locations

Avoid operating and storing the camera in the following location.

- Extreme hot or humid places (The operating temperature is from -20°C to $+45^{\circ}\text{C}$, -4°F to $+123^{\circ}\text{F}$.)
- Places subject to direct sunlight, excessive dust, mechanical vibration or shock.

Keep the camera in a horizontal positions and allow adequate air circulation.

Clean the viewfinder lens with a lens cleaner available at camera stores.

Do not use any type of solvent, such as alcohol, benzine or thinner.

1-12. SPECIFICATIONS

Camera	
Image device	2/3 inch interline-transfer CCD, 3-chip
System	RGB 3-CCDs (with quartz filter)
Spectral system	F1.4 prism system
Built-in filters	1: 3200°K 2: 5600°K + 1/4ND 3: 5600°K 4: 5600°K + 1/16ND
Lens mount	Special bayonet mount
Video output	PAL, 1.0 V (p-p), 75 ohms, unbalanced, sync negative
Connectors	Two outputs (TEST OUT, VTR connectors) VTR: 50 pin (video output, microphone output, sync output, power input) TEST OUT: BNC type LENS: 12 pin
Sensitivity	2000 lux with f4.5 (typical), 89.9% reflectance
Minimum subject illumination	15 lux (f1.4, +18 dB gain)
Video signal-to-noise ratio	55 dB (typical)
Horizontal resolution	550 lines (center)
Registration	Less than 0.05% for whole screen
Geometric distortion	Not identified
Power requirements	12 V dc (10.5 - 17 V)
Power consumption	10.5 W
Operating temperature	-20°C to +45°C (-4°F to +123°F)
Storage temperature	-20°C to +60°C (-4°F to +140°F)
Weight	3.2 kg with viewfinder (7 lb 1 oz)
Dimensions	Unit: mm (inches)

Viewfinder	
Picture tube	1.5-inch monochrome BRIGHT control, CONTR control, TALLY/ZEBRA ON/OFF switch, PEAKING switch, AUDIO/FILTER switch, AUDIO CH-1 control
Resolution	500 TV lines
Microphone	Sharp-directional

Supplied accessories

Tripod adaptor × 1
Extension board × 1
Extractor × 1
L-shaped wrench (2.5 mm dia.) × 1
L-shaped wrench (3 mm dia.) × 1
50-pin cap × 1
Rain-proof cover × 1
Cover for screw holes × 1
Screw × 2
Operation and maintenance manual × 1

Recommended equipment

Betacam series portable videocassette recorder BVV-1PS, BVV-1APS, BVW-25P
Camera adaptor CA-3
AC adaptor AC-500CE
Microphone C-74
Camera cable CCZQ-2 (2m),
CCZQ-5 (5m),
CCZQ-10 (10m)
CCZ-2 (2m),
CCZ-10 (10m)

Design and specifications subject to change without notice.

1-13. PACKING OF THE BVP-5P

1-14. HOW TO OPERATE THE BETACAM SYSTEM BVW-105P

1-14-1. Features

Compact and lightweight

The BVP-5P camera using three-chip CCD solid state image sensor, the BVV-1PS/BVV-1APS VTR, lens, battery and cassette tape together weigh only about 8.95 kg.

Wireless system

The camera, VTR, viewfinder, battery, microphone, etc. can be connected without using cables.

Low power consumption

The power consumption is so low that the unit can be operated for about 50 minutes with a single NP-1 battery pack at normal temperature when the BVV-1PS/BVV-1APS is used together.

Video and audio confidence

The video and audio confidence system makes it possible to check the recording picture and sound.

High-quality picture

A newly-developed recording system using 1/2-inch cassette tape for the Beta-format has greatly improved the picture quality, which now approaches the quality of the 1-inch VTR picture.

Built-in time code generator

A built-in time code generator allows simultaneous recording of the time code during operation. The user bit can also be recorded.

Independent time code track

The time code track is independent of the video track so that time code recording or erasing is possible using an editing machine.

Two audio channels

The sound from a built-in microphone or external microphones or the sound from other audio sources can be recorded on two audio channels separately.

Composite shooting

Videocassette programs can be composed shot-by-shot without any glitches between scenes because vertical-interval timing with a tape back-up feature guarantees a clean cut every time.

Warning system

If there is a problem, warning lamps allows you to monitor the operation and alarm is sounded simultaneously from the speaker or earphone.

Tape remaining time indicator

The tape remaining time indicators are situated in the viewfinder.

Use of the wireless microphone system

A receiver of the Sony wireless microphone system can be attached to the system.

Additional battery pack

One more battery pack can be used together with the battery pack installed in the battery compartment of the BVV-1PS/BVV-1APS.

Dolby NR* (Noise Reduction) C-type system for improving sound quality

The newly developed C-type Dolby NR system is employed for an improved S/N ratio and wider dynamic range. To activate the Dolby NR circuit, refer to section 2 of the BVV-1PS/BVV-1APS instruction manual.

Note

When the BVV-1PS with the serial No. 49999 or less is used, the following functions of the BVW-105P do not work.

- The audio level indicator in the viewfinder
- The recording level control of audio channel 1

* "Dolby" and the double-D symbol are trade marks of the Dolby Laboratories Licensing Corporation. Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

1-14-2. Components of the BVW-105P

Carrying case*
 L-shaped wrench (3 mm dia.)
 L-shaped wrench (2.5 mm dia.)
 Screws
 Rain-proof cover
 Cover for screw holes
 Battery compartment lid strap
 Extractor
 50-pin caps
 Time code cable

* The carrying case is supplied to the Betacam system BVW-105P. When a BVV-1PS/BVV-1APS VTR and a BVP-5P camera are obtained separately, they will not be supplied. To obtain them, please consult your Sony personnel.

1-14-3. Check Routines

Before operation, we recommend to perform the following check and confirm that the Betacam system works correctly. In this case, use a color monitor to check the picture.

1. Preparation

1. Insert a fully-charged battery pack.

2. POWER switch → ON

3. Check that the HUMID lamp does not light.

4. Check the battery.
Set the METER SELECT switch to BATT and check that the meter pointer deflects into the green zone.

5. Set the time code or the user bit, if necessary.

6. Insert a cassette tape.

• Check that the safety tab on the bottom of the cassette is in place.

2. Check the camera

2. Adjust the position of the viewfinder.

3. Check that the color bars appear on the viewfinder.

4. Set the OUTPUT (DCC) selector to BARS, and set the AUTO W/B BAL switch to WHT to select the character display mode.

5. Turn the BRIGHT control and CONTR control on the viewfinder so that the color bars on the viewfinder screen can be seen clearly.

6. Turn the FILTER selector 1 → 2 → 3 → 4 and check that the filter indicator in the viewfinder lights in turn according to the position of the FILTER selector.

7. Set the OUTPUT (DCC) selector to CAM.

8. Point the camera to the appropriate subject.

9. Turn the focus ring so that the subject is in the focus. Check that the subject appears on the viewfinder screen.

10. Check the motorized zoom function. With the motorized zoom knob, the picture changes from wide-angle to telephoto and vice versa.

11. Set the zoom in the manual mode.

12. Check the manual zoom function. Turn the manual zoom lever and check that the picture changes from wide-angle to telephoto and vice versa.

13. Set the zoom in the motorized mode.

14. Point the camera at subjects with different brightness and check that the auto iris mechanism functions.

15. Set the iris in the manual mode.

16. Turn the iris ring and check that iris is adjusted.

17. Press and hold down the instant auto button to temporarily switch to automatic iris adjustment. Point the camera at subjects under different brightness levels to check the adjustment.

18. Set the iris in the automatic mode.

19. Set the GAIN selector to 9 and to 18. Check that the iris closes and that the GAIN UP indicator in the viewfinder lights.

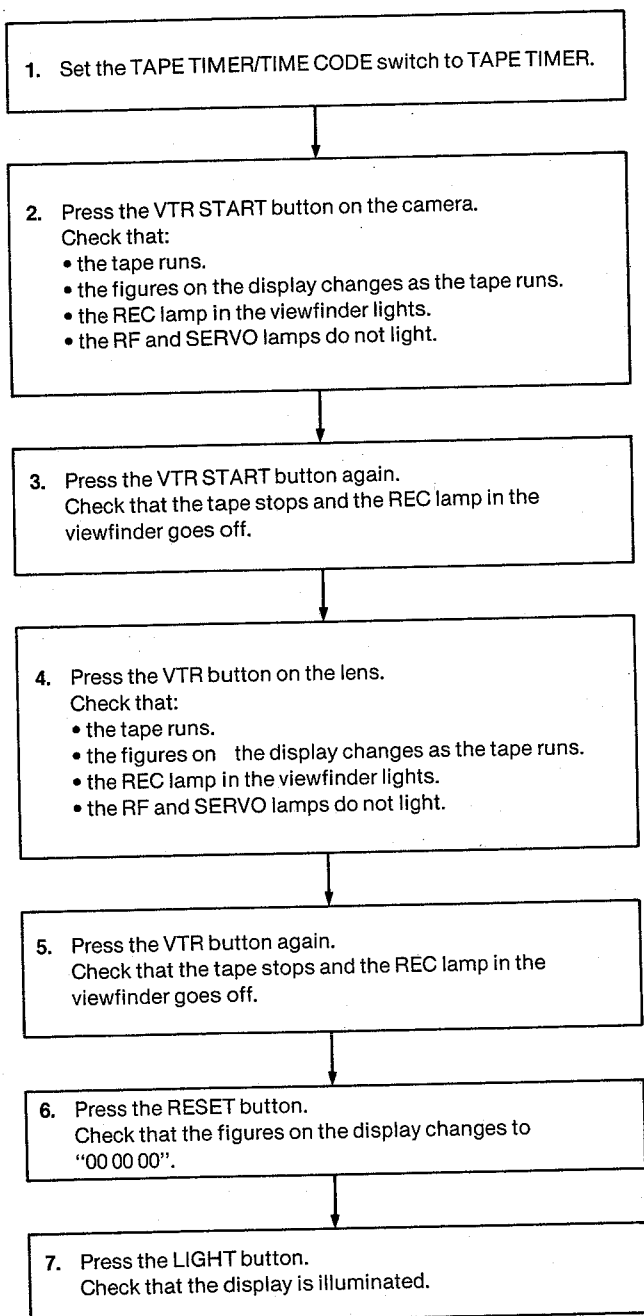

20. Set the GAIN selector to 0.

21. Set the AUDIO/FILTER switch to AUDIO. Check that the FILTER/AUDIO indicator shows the audio level.

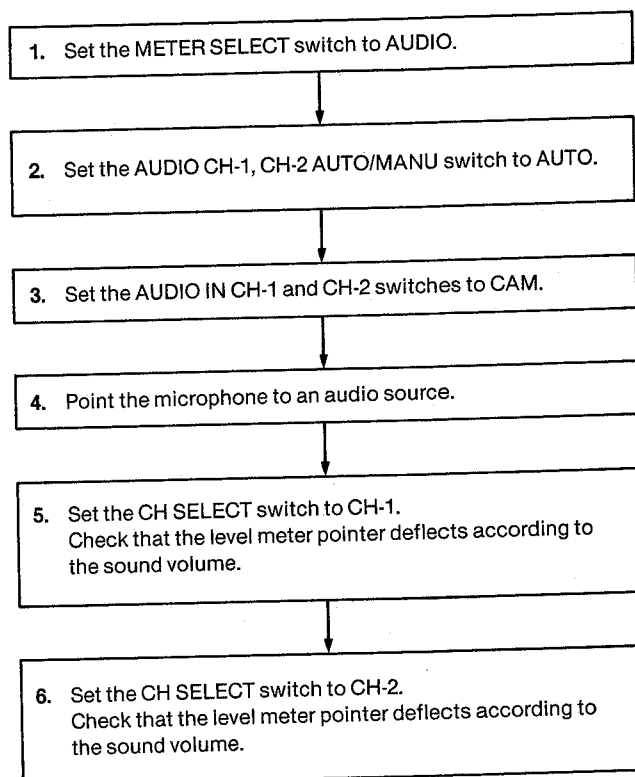

3. Check the VTR

Perform the 3-1. through the 3-5. continuously.

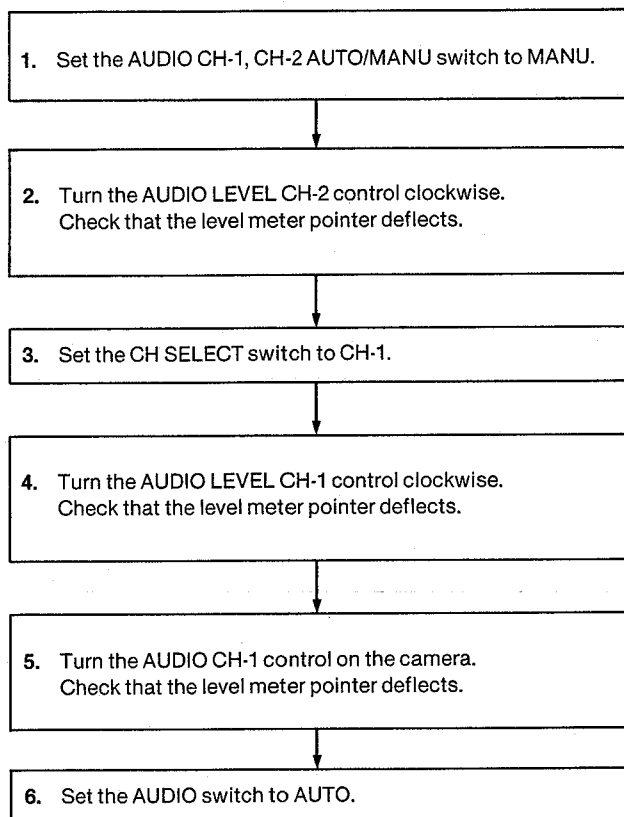

3-1. Check the tape transport

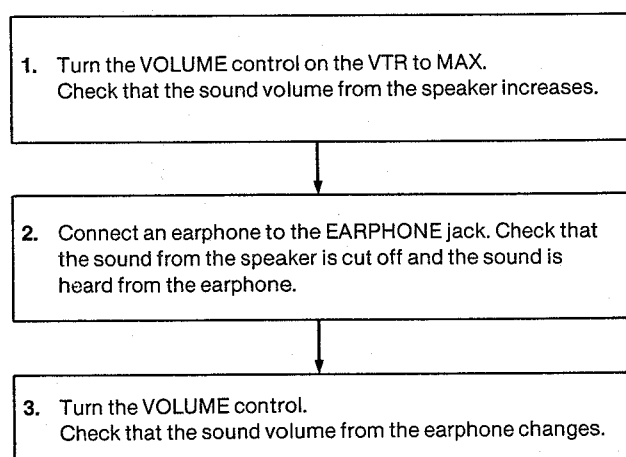

3-2. Check the automatic audio recording level adjustment

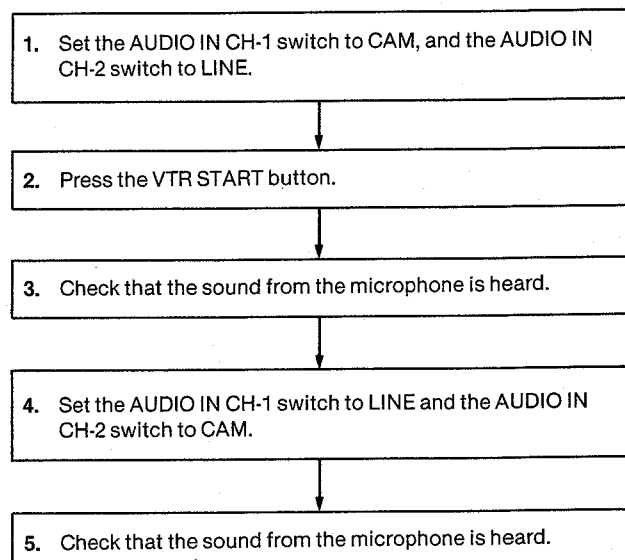

3-3. Check the manual audio recording level adjustment

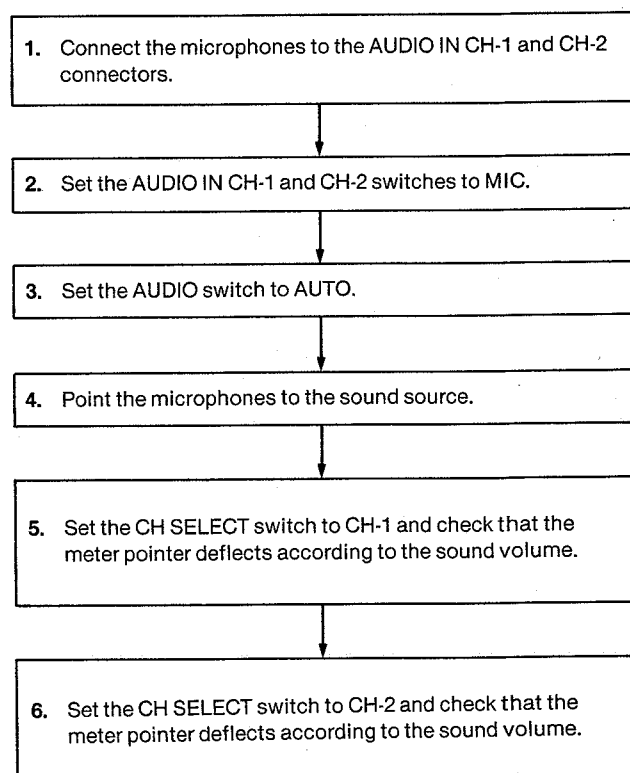

3-4. Check the earphone and speaker

3-5. Check the audio confidence function

3-6. Check the external microphones

1-14-4. Operation

1. Preparation

Before starting operation, check that the switches are set correctly as shown below.

2. Recording

4. Adjust the white balance and the black balance.
When the white balance and the black balance value has been memorized

Set the WHITE BAL switch to A or B.

When the white balance value is not memorized but you want to start recording quickly

Set the WHITE BAL switch to PRESET and set the AUTO W/B BAL switch to BLK. The white balance and the black balance at about 3200°K is obtained.

To adjust the white balance and the black balance

- 1) Set the WHITE BAL switch to A or B.
 - 2) Zoom up the white subject.
 - 3) Set the AUTO W/B BAL switch to BLK. When the W/B CENT indicator lights and "BLACK: OK" is displayed, the black balance is adjusted.
 - 4) Set the AUTO W/B BAL switch to WHT and check that the W/B CENT indicator lights and "WHITE: OK" is displayed.
- For details on the white balance and black balance adjustments, see "1-6. Adjustments".

5. Point the camera to the subject and adjust the focus and zoom.

6. Zum Starten der Aufnahme die VTR START-Taste am Objektiv oder die VTR-Taste an der Kamera drücken.

Während der Aufnahme leuchtet die REC-Anzeige im Sucher.

7. Zum Stoppen der Aufnahme die VTR START- oder VTR-Taste erneut drücken. Der Videorecorder schaltet dann auf Bereitschaft, und die REC-Anzeige erlischt.

Manuelle AudiopegelEinstellung

Der Audiopegel kann wie im folgenden erläutert, manuell eingestellt werden. Bei Verwendung eines BVV-1PS mit einer Serien-Nr. von 50001 und höher oder einem BVV-1APS kann der Pegel von Kanal 1 sowohl am Videorecorder als auch an der Kamera eingestellt werden.

- 1 Stellen Sie die AUDIO IN-Schalter für beide Kanäle wie folgt ein:
Bei Verwendung des eingebauten Mikrofons → CAM
Bei Verwendung eines Außenmikrofons → MIC
Zum Aufnehmen eines extern zugeleiteten Signals → LINE
- 2 Stellen Sie die AUDIO CH-1, CH-2 AUTO/MANU-Schalter auf MANU.
- 3 Stellen Sie den Pegel von Kanal 1 wie folgt ein:
 - 1) Drehen Sie den AUDIO LEVEL CH-1-Regler am Videorecorder ganz nach rechts.
 - 2) Stellen Sie den AUDIO/FILTER-Schalter der Kamera auf AUDIO.
 - 3) Justieren Sie den AUDIO CH-1-Regler der Kamera so ein, daß normalerweise 1 bis 4 Segmente der FILTER/AUDIO-Anzeige leuchten und das rote Segment nur kurzzeitig bei den Spitzenpegeln leuchtet.
 - Die maximal mit dem AUDIO CH-1-Regler der Kamera erreichbare Dämpfung liegt bei ca. 20 dB. Falls dies nicht ausreicht, justieren Sie den Pegel am AUDIO LEVEL CH-1-Regler des Videorecorders ein.
 - Die Segmente der FILTER/AUDIO-Anzeige im Sucher zeigen den Spitzenpegel wie folgt an:

FILTER/AUDIO-Anzeige	1	2	3	4	
Pegelmeter (VU)	-6	-4	0	+3	+6

- 4 Stellen Sie den Pegel von Kanal 2 am AUDIO LEVEL CH-2-Regler des Videorecorders so ein, daß das Pegelmeter bei maximalem Eingangspegel 0 VU anzeigt.

1-14-5. Warnsystem

Anzeigen im Sucher und am Videorecorder sowie akustische Signale über Lautsprecher bzw. Ohrhörer machen das Bedienpersonal auf folgende Betriebszustände aufmerksam:

Ursache	Anzeigen im Sucher			Anzeigen am Videorecorder						Warnton	Videorecorderbetrieb und Korrektur
	REC	TAPE 5M	BATT	RF	SERVO	HUMID	SLACK	TAPE END	BATTERY		
Bandende fast erreicht										W W	Aufnahme geht weiter.
Bandende										WWWW	Aufnahme stoppt; Cassette austauschen.
Batterie fast leer										W W	Aufnahme geht weiter.
Batterie leer										WWWW	Aufnahme stoppt; Batterie austauschen.
Fehler im Aufnahmesystem										W W W	Aufnahme geht weiter; es kann jedoch zu Betriebsstörungen kommen. Die Köpfe müssen gereinigt werden. (Siehe dazu Bedienungsanleitung des BVV-1PS/BVV-1APS.)
Abnormalität im Servosystem										W W W	Schalten Sie das System aus und wenden Sie sich an Ihren Sony Händler. Ein kurzes Aufleuchten der Anzeige beim Anlaufen des Bandes ist normal und stellt kein Problem dar.
Kondensation										W W W	Aufnahme geht weiter, solange das Band nicht an der Kopftrommel haftet. Wenn dieser Fall eintritt, stoppt die Aufnahme, und das Band wird entladen.
zu geringer Bandzug										WWWW	Die Aufnahme stoppt. Der POWER-Schalter und die EJECT-Taste arbeiten nicht mehr. Nehmen Sie die Cassette manuell entsprechend Teil 2 der Anleitung des BVV-1PS/BVV-1APS heraus.

Bedeutung der Symbole			
Anzeigen		Warnton	
	: Blinkt mit 1 Hz	W W	: 1-kHz-Ton, 1-Sekunden-Intervall
	: Blinkt mit 4 Hz	W W W	: 1-kHz-Ton, 1/4-Sekunden-Intervall
	: Leuchtet auf	WWWW	: Dauerton

6. Press the VTR START button on the lens or the VTR button on the camera and the recording begins.

The REC lamp in the viewfinder lights during recording.

7. To stop recording, press the VTR START or VTR button again.
The VTR is in the standby mode and the REC lamp goes off.

Manual audio recording level adjustment

The audio recording level can be adjusted manually with the method as shown below. When the BVV-1PS with the serial No. 50001 and higher or the BVV-1APS is used, the audio channel-1 can be adjusted both on the VTR and on the camera.

- 1 Set the AUDIO IN switches for both audio channels as follows:
When the built-in microphone is used → CAM
When an external microphone is used → MIC
When a line input signal is recorded → LINE
- 2 Set the AUDIO CH-1, CH-2 AUTO/MANU switches to MANU.
- 3 Adjust the level of channel 1 as follows.
 - 1) Turn the AUDIO LEVEL CH-1 control on the VTR fully clockwise.
 - 2) Set the AUDIO/FILTER switch on the camera to AUDIO.
 - 3) Turn the AUDIO CH-1 control on the camera so that the 1 through 4 lamps of the FILTER/AUDIO indicator is usually lit and the red indicator is momentarily lit at the maximum input.
 - The maximum attenuation of the AUDIO CH-1 control on the camera is approximately 20 dB. If an appropriate level cannot be obtained within this range, adjust the level by using the AUDIO LEVEL CH-1 control on the VTR.
 - The FILTER/AUDIO indicator in the viewfinder shows the following level responding to the peak signal.

FILTER/AUDIO indicator

1	2	3	4	
-6	-4	0	+3	+6

Level meter indication (VU)

- 4 The level of the channel 2 is adjusted by the AUDIO LEVEL CH-2 control on the VTR so that the point of the level meter deflects to 0 VU at the maximum input.

1-14-5. Warning System

The indicators and lamps in the viewfinder, the warning lamps on the VTR and the alarm from the speaker or the earphone serve to advise the operator of the following operational states.

Cause	Lamps in viewfinder			Lamps on VTR						Alarm sound	VTR Operation and Correction
	REC	TAPE 5M	BATT	RF	SERVO	HUMID	SLACK	TAPE END	BATTERY		
Tape nearly at its end										W W	Recording continues.
End of tape										WWWW	Recording stops. Change cassettes.
Battery near end										W W	Recording continues.
Battery end										WWWW	Recording stops. Change batteries.
Something wrong in the recording system										W W W	Recording continues but may not be performed correctly. Head-cleaning is required. (For details on head-cleaning, see the instruction manual of the BVV-1PS/BVV-1APS.)
Irregularity in servo										W W W	Recording continues but may not be performed correctly. Turn off the power and consult your Sony dealer. The lamp may momentarily blink when the tape starts running, but this is not a problem.
Moisture condensation										W W W	Recording continues as long as the tape does not stick to the head drum. If this happens, recording will stop and the tape will be unthreaded.
Slack tape										WWWW	Recording stops. The POWER switch and the EJECT button do not function. Remove the cassette manually referring to the section 2 of the BVV-1PS/BVV-1APS's instruction manual.

1-14-6. Putting on the Rain Cover

To cover the Betacam system BVW-105P

1. OPERATION

Attaching the covered Betacam system BVW-105P to the tripod adaptor

Leave the velcro tape under the VTR unfastened as illustrated.

After attaching to the tripod adaptor, fasten the velcro tape over it.

To cover the BVP-5P with the Camera adaptor CA-3 attached

TEIL 1 BETRIEB

Die BVP-5P ist eine kompakte und leichte, mit einem 3-Chip CCD-Bildwandler (Charge Coupled Device) ausgestattete Farb-Videokamera. Bei Zusammenschaltung der BVP-5P mit dem portablen Videorecorder BVV-1PS/BVV-1APS erhält man das Betacam-System BVW-105P, das sich besonders für elektronische Berichterstattung eignet und zu dessen Bedienung nur eine Person erforderlich ist. Bei Verwendung mit dem Kameraadapter CA-3 (Sonderzubehör) kann die BVP-5P auch portabel eingesetzt werden.

1-1. ÜBERBLICK

CCD-Bildwandler

Dank dem CCD-Bildwandler konnte die Kamera kompakt und leicht ausgelegt werden und weist einen geringeren Stromverbrauch als eine Kamera mit herkömmlichen Aufnahmehöhlen auf. Neben einer langen Lebensdauer zeichnet sich ein CCD-Bildwandler noch durch folgende Vorteile aus:

- Praktisch keine Nachzieheffekte, keine Einbrenngefahr und keine geometrischen Verzerrungen.
- Unempfindlichkeit gegenüber Vibrationen und Stößen.
- Keine Beeinflussung durch das Erdmagnetfeld.
- Dank hohem Signal-Rauschabstand kann der Videoausgangspegel um 9 dB oder 18 dB angehoben werden, so daß man auch bei schwacher Beleuchtung noch klare Aufnahmen erhält.
- Eine Farbdeckungseinstellung ist nicht erforderlich.

Kompakt und leicht

Dank einem Gehäuse aus Magnesiumguß ist diese kompakte, benutzerfreundliche Kamera nicht nur sehr leicht, sondern auch robust.

Hohe Empfindlichkeit

Der Videoausgangspegel kann um 9 dB oder 18 dB angehoben werden. Selbst in der 18-dB-Position kann noch mit hochqualitativen Aufnahmeresultaten gerechnet werden.

Automatischer Weiß/Schwarzabgleich und fester Weißabgleichwert

Der Weiß- und Schwarzabgleich kann automatisch für jede Filterposition ausgeführt und in den nicht flüchtigen Memories A und B abgespeichert werden. Da die Memories A und B getrennte Werte aufnehmen können, lassen sich insgesamt 8 Abgleichwerte speichern. In der Stellung PRESET des WHITE BAL-Schalters erhält man einen festen Weißabgleich auf die Farbtemperatur 3200°K.

Warnsystem

Warnanzeigen im Sucher weisen auf Störungen des Videorecorders, auf das Bandende und eine erschöpfte Akkubatterie hin. Wird die BVP-5P zusammen mit dem BVV-1PS/BVV-1APS verwendet, so erhält man zusätzlich einen akustischen Warnton und im Sucher wird die restliche Bandzeit angezeigt.

Zeicheneinblendung

Die Einstellung der Bedienungselemente, die Schritte und Zustände der automatischen Einstellung sowie die Schritte des Selbsttestes können in den Sucherschirm eingeblendet werden.

Automatischer Objektiv-Schließmechanismus

In folgenden Fällen wird das Objektiv automatisch geschlossen:

- Der CAMERA/VTR-Ein/Aus-Schalter steht auf PREHEAT.
- Der OUTPUT (DCC)-Wähler steht auf BARS.
- Der automatische Schwarzabgleich wird momentan ausgeführt.
- Das Testsignal wird ausgegeben.

Außerdem weist die BVP-5P noch folgende Vorzüge auf:

- Geringe Stromaufnahme.
- Dank einem DCC-Schaltkreis (Dynamic Contrast Control) kann die Kamera bis zum Fünffachen der normalen Lichtstärke verarbeiten.
- Gen-Lock-Funktion bei Verwendung des Kameraadapters CA-3.
- Zeitcode-Verriegelung bei Verwendung des BVV-1APS.
- Zweizeiliger Bild-Enhancer.
- Schatten-Kompensationsschaltkreis ermöglicht die Verwendung von Konverter-Objektiven.
- Hohe Farbauflösung dank einem Detail-Schaltkreis, der die R- und B-Signale mischt.
- Test-Sägezahngenerator
- Maskierungs-Schaltkreis
- Mikrophon mit ausgeprägter Richtwirkung
- Automatikblende
- Videopegelanzeige
- Einstellmöglichkeit des Pegels von Audiokanal 1
- Ein/Aus-Schalter für Zebrawuster
- Anschlußmöglichkeit für Außenmikrophon
- Sucher mit hoher Auflösung
- Verstellbarer Sucher, der sowohl am rechten als auch am linken Auge verwendet werden kann.

1-2. LAGE UND FUNKTION DER TEILE UND BEDIENUNGSELEMENTE

1 Sucherfixierring

Zum Positionieren des Suchers lösen Sie diesen Ring, verschieben Sie den Sucher nach rechts oder links und drehen Sie den Ring dann wieder fest.

2 Helligkeitsregler (BRIGHT)

Zur Einstellung der Helligkeit des Sucherbildes. Durch Drehen nach rechts wird das Bild heller. Dieser Regler hat keinen Einfluß auf das Kamera-Ausgangssignal.

3 Kontrastregler (CONTR)

Zur Kontrasteinstellung des Sucherbildes. Dieser Regler hat keinen Einfluß auf das Kamera-Ausgangssignal.

4 Ein/Aus-Schalter für Signallampe und Zebra muster (TALLY/ZEBRA ON/OFF)

ZEBRA/TALLY: Zebra muster und Signallampe sind eingeschaltet.

OFF: Zebra muster und Signallampe sind ausgeschaltet.

ZEBRA: Das Zebra muster ist ein- und die Signallampe ist ausgeschaltet.

5 Filterwähler (FILTER)

Wählen Sie hier einen Filter entsprechend den Beleuchtungsverhältnissen.

Filternummer	Farbtemperatur	Lichtverhältnisse
1	3200°K	Sonnenaufgang, -untergang, im Studio
2	5600°K + 1/4ND*	In Freien bei gutem Wetter
3	5600°K	Bei Bewölkung oder Regen
4	5600°K + 1/16ND*	Schneelandschaft bei klarem Wetter, im Gebirge oder am Meer

*ND: Graufilter

6 Kamera/Videorecorder-Hauptschalter (CAMERA/VTR)

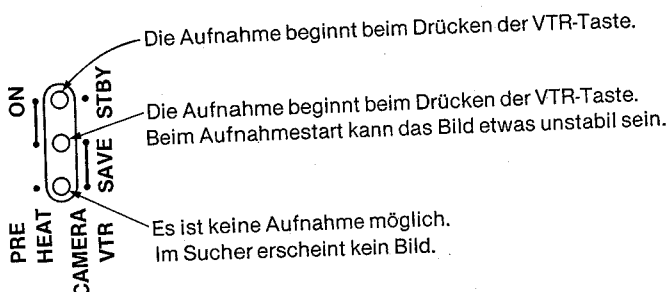

An diesem Schalter können die Kamera und der Videorecorder in folgende Betriebszustände geschaltet werden.

CAMERA-PREHEAT: Die Sucherbildröhre wird vorgeheizt. Das Bild erscheint jedoch noch nicht, so daß Energie gespart wird.

CAMERA-ON: Alle Komponenten der Kamera werden mit Strom versorgt, und das Bild erscheint im Sucher.

VTR-SAVE: Die Kopftrommel bleibt stehen, und das Band wird ausgefädelt. Hierdurch wird Energie gespart, so daß mit einer Akkuladung eine längere Aufnahmezeit möglich ist.

VTR-STBY: Die Kopftrommel läuft los und das Band wird um die Kopftrommel geschlagen.

7 Verstärkungswähler (GAIN)

Bei Normalbedingungen sollte dieser Wähler auf „0“ stehen.

In den Positionen „9“ und „18“ wird der Video-Ausgangspegel um 9 dB bzw. 18 dB angehoben. Durch eine interne Schalterumstellung kann der Ausgangspegel in der 18-dB-Position auch um 24 dB angehoben werden. Genaueres dazu entnehmen Sie bitte Teil 2ff.

8 Ausgangs/Kontrastautomatik-Wähler (OUTPUT (DCC))

Zur Wahl des zur VTR-Buchse 12, TEST OUT-Buchse 17 und zum Sucher geleiteten Signals.

CAM: Für das von der Kamera aufgenommene Signal. In der Stellung DCC ON arbeitet der eingebaute DCC-Schaltkreis (Dynamic Contrast Control). Ist keine Kontrastautomatik erwünscht, stellen Sie den Wähler auf DCC OFF.

BARS (DCC OFF): Für das Farbbalkensignal, das entweder zur Einstellung des Videomonitors verwendet oder auf Band aufgezeichnet werden kann. Wird die BVP-5P zusammen mit dem BVV-1PS/BVV-1APS verwendet, so erscheinen die I-, Q-Signale nicht auf dem Bildschirm. Verwenden Sie diese Position zum Ändern des Zeichenanzeigebetriebs.

9 Weißabgleichschalter (WHITE BAL)

PRESET: Für werkseitig auf ca. 3200°K voreingestellten Weißabgleichwert (Jodlampe), wenn der FILTER-Wähler 5 auf 1 steht. Verwenden Sie diese Position, wenn keine Zeit für einen exakten Weißabgleich verbleibt.

A, B: Bei auf WHT gestelltem AUTO W/B BAL-Schalter 26 kann hier gewählt werden, ob der automatisch eingestellte Weißabgleichwert im Memory A oder B abgespeichert wird. Beim Abrufen stellen Sie den Schalter auf A oder B, je nachdem welcher Speicherwert gewünscht ist.

10 Zubehörschuh

Zum Aufstecken einer Videoleuchte usw.

11 Videorecorder-Halterung

Zum Befestigen des portablen Videorecorders BVV-1PS/BVV-1APS, des Kameraadapters CA-3 usw.

12 Videorecorder-Anschluß (VTR) (50 pol)

Verbinden Sie diesen Anschluß mit dem 50 pol- Anschluß des Videorecorders BVV-1PS/BVV-1APS, des Kameraadapters CA-3 usw.

13 Stativhalterung

Zum Befestigen der Kamera auf einem Stativ kann hier der mitgelieferte Stativadapter angebracht werden.

**14 Okularmuschel**

Die Okularmuschel ist abnehmbar, um direkt auf den Sucherschirm blicken zu können.

15 Sucher-Fixierstift

Zum Abnehmen des Suchers von der Kamera ziehen Sie diesen Stift hoch.

16 Schwarzpegelregler (PEDESTAL)

Zum Einstellen des Schwarzpegels.

17 Testausgang (TEST OUT) (BNC)

An dieser Buchse liegt das am ENC/REGI-Wähler **28** gewählte Signal an. Steht dieser Wähler auf ENC (codiertes Videosignal), so muß der Anschluß abgeschlossen werden, da sonst das codierte Signal nicht ausgegeben wird.

18 Objektivanschluß (LENS) (12 pol)

Zum Anschluß des Objektivkabels. Ihr Sony Händler gibt Ihnen gerne genauere Auskunft darüber, welche Objektive verwendet werden können.

19 Signallampe

Diese Lampe leuchtet bzw. blinkt entsprechend der REC-Lampe im Sucher, wenn der TALLY/ZEBRA ON/OFF-Schalter auf ZEBRA/TALLY gestellt ist.

20 Okularschärferegler

Dieser Regler dient zum Scharfstellen des Sucherbildes. Der Regler hat keinen Einfluß auf das Ausgangssignal der Kamera.

21 AUDIO/FILTER-Schalter*

AUDIO: Zum Einstellen des Aufnahmepegels von Tonkanal 1 am AUDIO CH-1-Regler. Die FILTER/AUDIO-Anzeige im Sucher zeigt den Tonaufnahmepegel an.

FILTER: Die FILTER/AUDIO-Anzeige im Sucher zeigt die am FILTER-Wähler eingestellte Filternummer an. Verwenden Sie stets diese Position; außer wenn die Kamera zusammen mit einem BVV-1PS/BVV-1APS der Serien-Nr. 49999 oder niedriger verwendet wird.

22 Aufnahmepegelregler für Tonkanal 1 (AUDIO CH-1)

Steht der AUDIO CH-1 MANU/AUTO-Schalter am BVV-1PS/BVV-1APS auf MANU und der AUDIO/FILTER-Schalter **21** auf AUDIO, so kann der Aufnahmepegel von Tonkanal 1 manuell eingestellt werden. Beobachten Sie bei der Einstellung die FILTER/AUDIO-Anzeige im Sucher.

23 Konturenanhebungsschalter (PEAKING)

Zur leichteren Schärfeneinstellung können mit diesem Schalter die Bildkonturen angehoben werden. Bei jedem Drücken dieses Schalters wird die Funktion abwechselnd ein- und ausgeschaltet.

24 Objektivarretierhebel

Nach dem Einsetzen des Objektivs in die Fassung arretieren Sie das Objektiv mit diesem Hebel.

25 Objektivfassung (Spezial-Bajonetttyp)

Zum Anbringen des Objektivs.

26 Schalter für automatischen Weiß/Schwarzabgleich (AUTO W/B BAL)

WHT: Für automatischen Weißabgleich stellen Sie den WHITE BAL-Schalter auf AUTO und dann diesen Schalter auf WHT.

Der eingestellte Wert wird automatisch gespeichert. Zum Ändern des Zeichenanzeigebetriebs stellen Sie diesen Schalter auf WHT, nachdem zuvor der OUTPUT (DCC)-Wähler auf BARS gestellt wurde. Bei jedem Umstellen auf WHT ändert sich die Betriebsart zyklisch. Beim Überprüfen der BVP-5P mit Hilfe der Selbsttest-Funktion wird beim Umstellen des Schalters auf WHT der nächste Selbsttestschritt ausgeführt.

BLK: Für automatischen Schwarzabgleich und Schwarzpegeleinstellung. Der eingestellte Wert wird automatisch gespeichert.

- Sowohl von der Position WHT als auch von BLK kehrt der Schalter selbständig beim Loslassen in die Mittelposition zurück.

27 Videorecorder-Starttaste (VTR START)

Zum Starten und Stoppen der Aufnahme. Die Taste hat die gleiche Funktion wie die VTR-Taste am Objektiv. Zur Verwendung der Taste muß die Abdeckung abgenommen werden.

28 Kodier/Registrier-Wähler (ENC/REGI)

Zur Wahl des an der TEST OUT-Buchse **17** anliegenden Signals.

ENC: Für das codierte Signal (FBAS) der R-, G- und B-Signale.

REGI: Für das am R/OFF/B-Wähler **30** und G/OFF/—G-Wähler **29** gewählte Signal (R, G, B, R—G oder B—G).

29 G/AUS/—G-Wähler (G/OFF/—G)

Hier wird wie folgt das an der TEST OUT-Buchse anliegende Signal gewählt, wenn der ENC/REGI-Wähler **28** auf REGI steht.

G: G- (Grün-) Signal

OFF: Das G-Signal ist abgeschaltet.

—G: —G- (phaseninvertiertes Grün-) Signal

30 R/AUS/B-Wähler (R/OFF/B)

Hier wird wie folgt das an der TEST OUT-Buchse anliegende Signal gewählt, wenn der ENC/REGI-Wähler **28** auf REGI steht.

R: R- (Rot-) Signal

OFF: R- und B-Signale sind abgeschaltet.

B: B- (Blau-) Signal

* Dieser Schalter und dieser Regler arbeiten nur, wenn die BVP-5P zusammen mit einem BVV-1PS der Serien-Nr. 49999 oder niedriger verwendet wird.

Anzeigen im Sucher

Anzeige für verbleibende Aufnahmezeit
Zeigt den zur Aufnahme noch verbleibende Bandvorrat in Minuten an. Die Anzeige arbeitet nur, wenn der BVV-1PS/BVV-1APS direkt über den 50pol Anschluß verbunden ist.

Aufnahmeanzeige (REC) (rot)
Diese Anzeige leuchtet während der Aufnahme und blinkt, wenn eine der Warnanzeigen am BVV-1PS/BVV-1APS blinkt oder leuchtet.
Genauere Informationen entnehmen Sie bitte der Bedienungsanleitung des Videorecorders.

Batterieanzeige (BATT) (rot)
Sind die Batterien erschöpft, so beginnt diese Anzeige einige Minuten, bevor die Spannung den zum einwandfreien Funktionieren notwendigen Wert unterschreitet, zu blinken. Ist der Wert überschritten, leuchtet die Anzeige konstant auf.

Anzeige für Weiß/Schwarzabgleich (W/B CENT) (orange)
Leuchtet auf, wenn der automatische Weiß- und Schwarzabgleich beendet ist. Nach 5 Sekunden erlischt die Anzeige.
War keine automatische Einstellung möglich, so blinkt die Anzeige ca. 5 Sekunden lang.

Verstärkungsanzeige (GAIN UP)
Diese Anzeige leuchtet, wenn der GAIN-Wähler auf 9 oder 18 gestellt ist.

FILTER/AUDIO-Anzeige
Wenn der AUDIO/FILTER-Schalter auf AUDIO gestellt ist, wird der Audiopegel angezeigt. Steht der Schalter dagegen auf FILTER, wird die am FILTER-Wähler gewählte Filternummer angezeigt.
(Genaueres entnehmen Sie bitte dem Abschnitt „Manuelle Audiopegel-einstellung“ von Seite 1-36.)

Bedeutung der Anzeige für verbleibende Aufnahmezeit
Diese Anzeige arbeitet nur, wenn BVP-5P und BVV-1PS/BVV-1APS direkt über die 50 pol Anschlüsse verbunden sind.

Noch zur Verfügung stehende Zeit	20	15	10	5	2	0 (Minuten)
Anzeigen	10M 5M	10M	5M	5M		: Blinkt mit 1 Hz
REC-Anzeige	REC					* : Blinkt mit 4 Hz

1-3. VORBEREITUNG

1-3-1. Bei Verwendung mit dem Videorecorder BVV-1PS/BVV-1APS

Im folgenden wird ein Beispiel zur kombinierten Verwendung der BVP-5P mit dem portablen Videorecorder BVV-1PS/BVV-1APS gezeigt. Informationen zur Verwendung der BVP-5P mit anderen Geräten entnehmen Sie bitte der betreffenden Bedienungsanleitung. Hier ist entweder der Griff der BVP-5P oder des Videorecorders zu verwenden. Nehmen Sie zunächst den jeweils nicht verwendeten Griff ab.

Verwendung des BVP-5P-Griffes

- 1 Nehmen Sie den Griff und die Schulterstütze des Videorecorders ab.

- 2 Setzen Sie die mitgelieferten Schrauben in die Löcher, an denen der Griff befestigt war, ein.

3 Bringen Sie den Videorecorder an der Kamera an.

4 Drehen Sie die Schrauben (beim Videorecorder mitgeliefert) fest.

Verwendung des Videorecordergriffes

- 1 Nehmen Sie den Griff der BVP-5P ab.

- 2 Bringen Sie das mitgelieferte Abdeckblech an den Schraubenlöchern des Griffes an.

3 Nehmen Sie die Schulterstütze vom Videorecorder ab.

5 Ziehen Sie die Schrauben (beim Videorecorder mitgeliefert) gut fest.

4 Befestigen Sie den Videorecorder an der Kamera.

1-3-2. Anbringung des Objektivs

- Genauere Informationen über das Objektiv finden Sie in der Anleitung des Objektivs.

1-3-3. Anbringung eines Stativs

1. DEUTSCH

1-3-4. Anbringung des Schulterriemens

1-4. STROMVERSORGUNG

Die Stromversorgung erfolgt von dem am 50pol Anschluß der BVP-5P angeschlossenen Geräts. Lesen Sie bitte die Bedienungsanleitung des betreffenden Geräts durch.

1-5. ANSCHLUSS

Außer im direkten Zusammenschluß mit dem BVV-1PS/BVV-1APS über die 50 pol Anschlüsse kann die BVP-5P auch wie folgt verwendet werden.

Anschluß des BVV-1PS/BVV-1APS über ein Verbindungskabel

- Der FBAS/Komponenten-Adapter VA-1VP kann auf gleiche Weise angeschlossen werden.
- Auch ein portabler Videorecorder der Betacam-Serie (z.B. BVW-25P) kann über das CCZ-Kabel angeschlossen werden.

Anschluß eines konventionellen portablen Videorecorders

- Wenn die Kamera von einem Videorecorder über ein Kamerakabel von mehr als 10 m Länge versorgt wird, kann es zu Beeinträchtigungen der Bildqualität kommen, wenn die BATT-Anzeige im Sucher zu blinken beginnt.

Anschluß des AC-500CE

- Wird der AC-500CE über ein 4pol Kabel mit dem Videorecorder verbunden, so wird dieser mit Strom versorgt.

1-6. EINSTELLUNGEN

1-6-1. Weiß- und Schwarzabgleich

- 1 Stellen Sie den FILTER-Wähler entsprechend den Lichtverhältnissen ein.

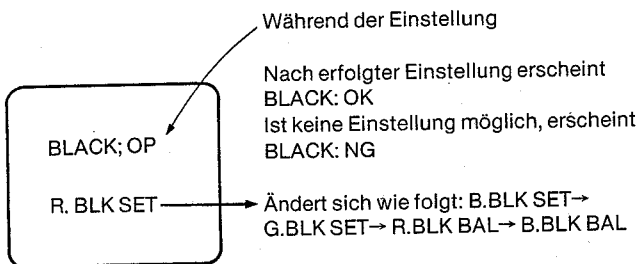

- 2 Stellen Sie die Schalter wie abgebildet ein.

- 3 Zoomen Sie unter den gleichen Lichtverhältnissen wie bei der späteren Aufnahme auf das weiße Testbild. Statt des weißen Testbildes kann auch eine andere weiße Fläche wie z.B. ein weißes Tuch oder eine weiße Wand verwendet werden. Folgende minimale weiße Fläche ist zur Einstellung erforderlich.

- 4 Ist eine Automatikblende vorhanden, so stellen Sie den Auto/Manuell-Schalter auf Auto. Falls nicht, stellen Sie die Blende manuell ein.

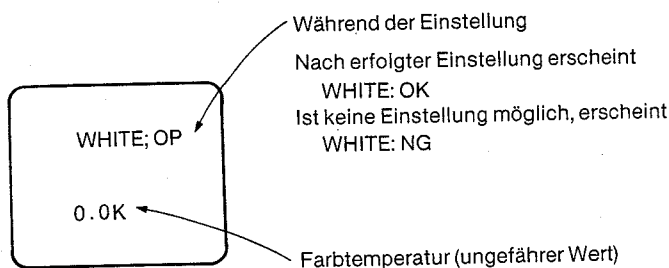

- 5** Stellen Sie den AUTO W/B BAL-Schalter auf BLK. Beim Loslassen kehrt dieser Schalter automatisch in die Mittelposition zurück. Während des Abgleichs wird folgendes in den Sucherschirm eingeblendet:

Nach einigen Sekunden ist der automatische Schwarzabgleich beendet, die W/B CENT-Anzeige leuchtet im Sucher auf, und der eingestellte Wert wird abgespeichert. Nach ca. fünf Sekunden erlischt die W/B CENT-Anzeige. Solange die W/B-Anzeige leuchtet, kann der Weißabgleich eingeleitet werden, indem man den AUTO W/B BAL-Schalter auf WHT stellt.

- Während des Schwarzabgleichs schließt sich das Objektiv.

- 6** Stellen Sie den AUTO W/B BAL-Schalter auf WHT. Während des Abgleichs wird folgendes in den Sucherschirm eingeblendet:

Nach ca. einer Sekunde ist der automatische Weißabgleich beendet, die W/B CENT-Anzeige leuchtet im Sucher auf, und der Wert wird je nach Festlegung in Schritt 1 entweder in Memory A oder B eingelesen. Nach ca. 5 Sekunden erlischt die W/B CENT-Anzeige wieder.

Weiß- und Schwarzabgleich sind damit beendet.

- Die Zeicheneinblendung kann vom Bildschirm gelöscht werden. (Siehe hierzu unter „1-9. ZEICHENEINBLENDUNG IM SUCHER“.)
- Wenn sich die Beleuchtungsverhältnisse geändert haben, braucht lediglich der Weißabgleich neu ausgeführt zu werden. Ein erneuter Schwarzabgleich ist nicht erforderlich.
- Der Schwarzabgleich braucht im allgemeinen auch dann nicht erneut ausgeführt zu werden, wenn die Kamera zwischenzeitlich einmal ausgeschaltet wurde. Nur in den folgenden Fällen ist ein erneuter Schwarzabgleich erforderlich:
 - Wenn die BVP-5P zum ersten Mal verwendet wird.
 - Wenn die BVP-5P längere Zeit nicht verwendet wurde.
 - Wenn sich die Temperatur erheblich geändert hat.
- Bei einem Objektiv mit Automatikblende kann es vorkommen, daß die Automatik den richtigen Blendenwert nicht findet und die Blende ständig öffnet und schließt. Justieren Sie dann den AUTO IRIS GAIN-Regler des Objektivs ein. (Genaueres dazu finden Sie in der Bedienungsanleitung des Objektivs.)
- Wenn der AUTO W/B BAL-Schalter auf BLK gestellt wird, wird die Einstellung des GAIN-Wählers automatisch geändert und das Sucherbild kann gestört sein. Dies stellt jedoch kein Problem dar.
- Wenn die W/B CENT-Anzeige leuchtet, kann mit der nächsten Einstellung begonnen werden. Die Anzeige erlischt, wenn der Schalter in die andere Position gestellt wird, und leuchtet am Ende der Einstellung erneut auf.

Wenn kein Schwarzabgleich möglich ist

In einem solchen Fall erhält man im Sucher zunächst die Anzeige BLACK; NG und danach die im folgenden aufgelisteten Anzeigen. Der Schwarzabgleich muß dann erneut ausgeführt werden.

Anzeige	Ursache
HARD ERROR TRY AGAIN	Die Bezugsspannung der Einstellung kann nicht gespeichert werden.
OVER FLOW TRY AGAIN	Der Unterschied zwischen dem Bezugswert und dem momentanen Wert ist für einen automatischen Abgleich zu groß.
TIME LIMIT TRY AGAIN	Die Einstellung ist nicht innerhalb der definierten Einstellzeit möglich.
IRIS: NOT CLOSED TRY AGAIN	Die Blende wurde nicht geschlossen.
BOUNCING: TOO LONG TRY AGAIN	Der Schwarzpegel kann nicht innerhalb der definierten Zeit eingestellt werden.

Wenn der Weißabgleich nicht ausgeführt werden kann

In einem solchen Fall erhält man im Sucher zunächst die Anzeige WHITE; NG und dann die im folgenden aufgelisteten Anzeigen.

Treffen Sie die notwendigen Maßnahmen und führen Sie dann den Weißabgleich erneut aus.

Anzeige	Ursache
LOW LEVEL TRY AGAIN	Der Videoausgangspegel ist zu niedrig. Verstärken Sie die Beleuchtung oder stellen Sie den GAIN-Wähler anders ein.
HARD ERROR TRY AGAIN	Die Bezugsspannung der Einstellung kann nicht gespeichert werden.
TIME LIMIT TRY AGAIN	Die Einstellung ist nicht innerhalb der definierten Einstellzeit möglich.
C.TEMP.LOW CHG.FILTER TRY AGAIN	Die Farbtemperatur ist zu niedrig. Stellen Sie am FILTER-Wähler einen geeigneten Filter ein.
C.TEMP.HIGH CHG.FILTER TRY AGAIN	Die Farbtemperatur ist zu hoch. Stellen Sie am FILTER-Wähler einen geeigneten Filter ein.

Wenn die W/B CENT-Anzeige blinkt

Überprüfen Sie, ob der richtige Filter gewählt ist und führen Sie den Weiß- und Schwarzabgleich erneut aus.

Wenn der WHITE BAL-Schalter auf PRESET gestellt ist

Steht der FILTER-Wähler auf 1, so erhält man in diesem Fall einen Weißabgleich auf ca. 3200°K. Es ist dann nur ein Schwarzabgleich (AUTO W/B BAL-Schalter auf BLK stellen) erforderlich.

Abspeichern der Weiß- und Schwarzabgleichwerte

Die BVP-5P besitzt die beiden Memories A und B, so daß für jedes Filter zwei Weiß-/Schwarzabgleichwerte gespeichert werden können. Insgesamt können 8 Werte gespeichert werden (4 in Memory A und 4 in Memory B).

Memory A für

- Filter 1
- Filter 2
- Filter 3
- Filter 4

Memory B für

- Filter 1
- Filter 2
- Filter 3
- Filter 4

Die Speicherungen bleiben auch bei ausgeschalteter Kamera ca. eine Woche lang erhalten.

- Die Anzahl der Speicherungen kann an einem internen Schalter auf zwei (einer für Memory A und einer für Memory B) umgestellt werden. Die gespeicherten Werte haben dann keinen Zusammenhang mehr mit der Wahl des Farbtemperaturfilters. Genauer dazu siehe Teil 2 ff.

1-6-2. SchwarzpegelEinstellung

Die SchwarzpegelEinstellung erfolgt am AUTO W/B BAL-Schalter zusammen mit dem Schwarzabgleich. Genaueres dazu siehe Teil 2 ff.

1-6-3. Positionieren des Suchers

Der Sucher kann für bequemes Betrachten nach links oder rechts verschoben oder so positioniert werden, daß eine Verwendung am linken Auge möglich ist.

1 Lösen Sie den Arretierring.

2 Schieben Sie den Sucher zur gewünschten Position nach links oder rechts.

3 Drehen Sie den Ring fest.

- Vor dem Einsetzen der Kamera in den Tragekoffer schieben Sie den Sucher ganz nach links (vom Objektiv aus gesehen).
- Zum Abnehmen des Suchers von der Kamera lösen Sie den Sucher-Arretierring, halten Sie den Fixierstift hochgezogen und nehmen Sie den Sucher dann ab.

Abnehmen der Okularmuschel

Bei abgenommener Okularmuschel kann direkt auf den Sucherschirm geblickt werden.

Abnehmen der Okularmuschel

- 1** Den Okularmuschelring so drehen, daß die Linien aufeinander ausgerichtet sind.
- 2** Die Okularmuschel abziehen.

Anbringen der Okularmuschel

- 1** Die Linie am Sucher auf den Punkt an der Okularmuschel ausrichten und die Muschel aufstecken.
- 2** Den Okularmuschelring bis zum Anschlag drehen.

1-7. FUNKTIONSKONTROLLEN

Im folgenden ist ein Bedienungsbeispiel dargestellt. Genauere Informationen zur Bedienung des Objektivs entnehmen Sie bitte der Bedienungsanleitung des Objektivs.

2. Den Sucher positionieren.

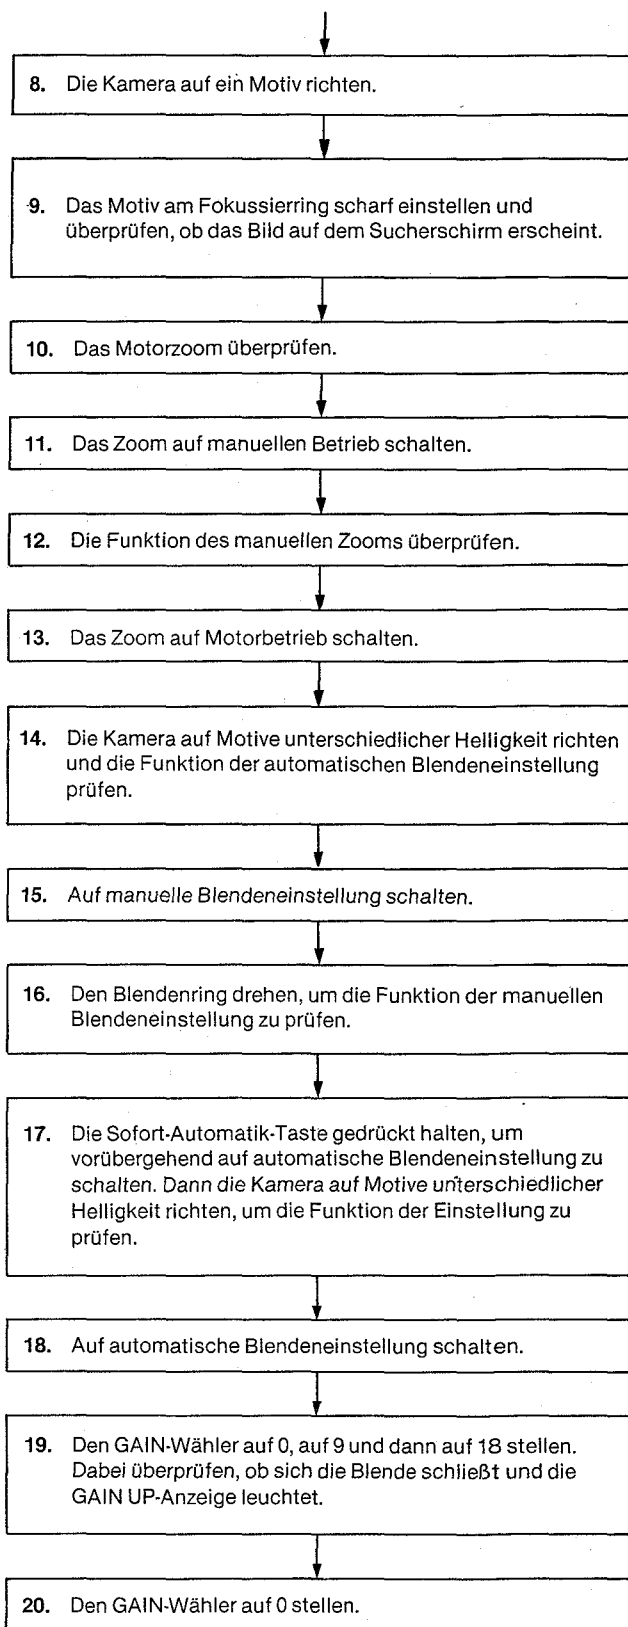

3. Sicherstellen, daß die Farbbalken auf dem Sucherschirm erscheinen.

4. Den OUTPUT (DCC)-Wähler auf BARS und den AUTO W/B BAL-Schalter auf WHI stellen. Dann überprüfen, ob sich bei jedem Umstellen des AUTO W/B BAL-Schalters auf WHT die Anzeige wie folgt ändert: MODE 1 → MODE 2 → MODE 3.

5. Den BRIGHT- und CONTR-Regler so einstellen, daß die Farbbalken klar auf dem Sucherschirm abgebildet werden.

6. Den FILTER-Wähler wie folgt umstellen: 1 → 2 → 3 → 4, und überprüfen, ob die richtige FILTER-Anzeige auf dem Sucherschirm erscheint.

7. Den OUTPUT (DCC)-Wähler auf CAM stellen.

1-8. BETRIEB

1-8-1. Vorbereitung

Vor dem Betrieb stellen Sie die Schalter wie folgt ein:

* DCC-Funktion (Kontrastautomatik)

Wenn bei einer Gegenlichtaufnahme (Motiv vor sehr hellem Hintergrund) der Ausgangspegel auf die Helligkeit des Motivs abgeglichen wird, so sind im Hintergrund, bedingt durch Sättigung des Ausgangspegels, keine Details mehr sichtbar. Abhilfe schafft hier die DCC-Funktion, die in folgenden Fällen eingesetzt werden sollte.

- Wenn bei gutem Wetter ein Motiv im Schatten aufgenommen wird.
- Wenn beispielsweise Leute in einem Auto oder Zimmer aufgenommen werden und gleichzeitig auch die Szene außerhalb des Fensters deutlich sichtbar sein soll.
- Wenn das Motiv sehr hohe Kontraste enthält.

1-8.2. Aufnahme

- 1 Schalten Sie die Kamera und die angeschlossenen Geräte ein.

- 2 Legen Sie die Cassette ein.
- 3 Wählen Sie einen geeigneten Filter.
- 4 Stellen Sie den Weiß- und Schwarzabgleich ein.
Wenn der Weiß- und Schwarzabgleichwert bereits gespeichert wurde,
stellen Sie den WHITE BAL-Schalter auf A oder B.
- 5 Richten Sie die Kamera auf das Motiv und stellen Sie Schärfe und Zoom ein.
- 6 Drücken Sie die VTR START-Taste zum Starten der Aufnahme. Die REC-Anzeige im Sucher leuchtet während der Aufnahme.
- 7 Zum Stoppen der Aufnahme drücken Sie die VTR START-Taste erneut.

Wenn kein Weiß- und Schwarzabgleichwert gespeichert ist, aber unmittelbar mit der Aufnahme begonnen werden soll,
stellen Sie den WHITE BAL-Schalter auf PRESET und den AUTO W/B BAL-Schalter auf BLK. Man erhält dann einen Weiß- und Schwarzabgleich für 3200 ° K.

Durchführung des Weiß- und Schwarzabgleichs

- 1) Stellen Sie den WHITE BAL-Schalter auf A oder B.
 - 2) Richten Sie die Kamera auf einen weißen Gegenstand.
 - 3) Stellen Sie den AUTO W/B BAL-Schalter auf BLK.
Sobald die W/B CENT-Anzeige im Sucher aufleuchtet und BLACK: OK auf dem Sucherschirm erscheint, ist der Schwarzabgleich beendet.
 - 4) Stellen Sie den AUTO W/B BAL-Schalter auf WHT.
Sobald die W/B CENT-Anzeige im Sucher aufleuchtet und WHITE: OK erscheint, ist der Weißabgleich beendet.
- Genauer entnehmen Sie bitte dem Abschnitt „1-6-1. Weiß- und Schwarzabgleich“.

Überprüfung des Videopegels

An den Stellen des Sucherbildes, an denen der Videopegel des Bildes 70% (IRE-Einheit) beträgt, erscheint ein Streifenmuster, mit dessen Hilfe die Blende manuell eingestellt werden kann. Das Zebromuster kann am TALLY/ZEBRA ON/OFF-Schalter abgeschaltet werden, allerdings nur, wenn der betreffende Schalter an einer internen Leiterplatte auf OFF gestellt ist. Genauer dazu siehe Teil 2.

Aufnahmen bei schlechten Beleuchtungsverhältnissen

Bei unzureichender Beleuchtung erscheint :LOW LIGHT mit blinkendem Doppelpunkt auf dem Sucherschirm, und die Bildqualität verschlechtert sich. Stellen Sie dann den GAIN-Wähler auf die Position 9 oder 18, um den Videoausgangspegel um 9 dB bzw. 18 dB anzuheben. Durch Umstellen eines Schalters an einer internen Leiterplatte ist statt einer Anhebung um 18 dB auch eine Anhebung um 24 dB möglich. Siehe hierzu Teil 2 ff.

- Normalerweise muß der Wähler auf 0 stehen.

1-9. ZEICHENEINBLENDUNG IM SUCHER

Die Schaltereinstellungen, Aussagen über die automatischen Einstellungen usw. können in den Sucherschirm eingeblendet werden. Hierbei sind drei unterschiedliche Anzeigebetriebsarten zu unterscheiden.

In der Betriebsart 3 erhält man die meisten und in der Betriebsart 1 nur einige wenige Anzeigen. Die Betriebsart 2 liefert noch einige Zusatzanzeigen zur Betriebsart 1. Die jeweils gewählte Betriebsart wird ebenfalls im Sucher angezeigt.

1-9-1. Ändern der Anzeigebetriebsart

1 Stellen Sie den CAM/BARS-Wähler auf BARS.

2 Stellen Sie den AUTO WHT/BLK-Wähler auf WHT.
Jedesmal, wenn dieser Wähler auf WHT gestellt wird, ändert sich die Betriebsart zyklisch wie folgt: 1 → 2 → 3 → 1 →.

Die gewählte Betriebsart bleibt auch bei ausgeschalteter Kamera ca. eine Woche lang gespeichert. Im Falle der Festwertspeicherung wird jedoch stets automatisch Betriebsart 3 gewählt.

1-9-2. Anzeige der Schalterstellungen

Die Schalterstellungen werden beim Einschalten der Kamera nacheinander ca. drei Sekunden lang eingeblendet (außer der GAIN-Anzeige). Auch beim Ändern einer Einstellung erscheint die betreffende Anzeige ca. drei Sekunden lang und verschwindet dann wieder.

x: Keine Anzeige

o: Wird angezeigt

Anzeige	Bedeutung	Betriebsart		
		1	2	3
GAIN: 0 DB	Einstellung des GAIN-Wählers (0 DB, 9 DB, 18 DB)	x	x	o
DCC: ON	Einstellung des OUTPUT (DCC)-Wählers (ON oder OFF)	o	o	o
FILTER: 1	Einstellung des FILTER-Wählers (1, 2, 3, 4)	x	x	o
WHITE: PRESET	Einstellung des WHITE BAL-Wählers (PRESET, A CH, B CH)	o	o	o
0.0K	Farbtemperatur*	x	o	o
WHITE: PRESET	Einstellung des WHITE BAL-Wählers (PRESET, A CH, B CH)	o	o	o
0.0K	Farbtemperatur*	x	o	o

* Der angezeigte Wert ist mit 1000 zu multiplizieren. Es handelt sich um einen Näherungswert.

1-9-3. Warnanzeigen

Wenn keine einwandfreie Aufnahme möglich ist, werden zur Warnung folgende Anzeigen eingeblendet.

Anzeige	Bedeutung	Betriebsart		
		1	2	3
:MEMORY NG (Doppelpunkt blinkt.)	Es ist kein Wert mehr gespeichert, und man erhält den voreingestellten Wert. Der Weiß- und Schwarzabgleich muß erneut ausgeführt werden.	o	o	o
:LOW LIGHT (Doppelpunkt blinkt.)	Die Beleuchtung ist unzureichend, und der Videoausgangspegel liegt unter dem Nennwert.	x	x	o

1-9-4. Anzeige der automatischen Einstellungen

Diese Anzeigen werden ca. fünf Sekunden lang eingeblendet und verschwinden dann wieder.

Anzeige	Bedeutung	Betriebsart		
		1	2	3
WHITE; OP 0.0K	Weißabgleich wird gerade ausgeführt. Farbtemperatur	x	x	o
WHITE; OK 0.0K	Weißabgleich beendet.	x	x	o
WHITE; NG LOW LEVEL TRY AGAIN	Aufgrund zu geringen Videoausgangspegels konnte der Weißabgleich nicht ausgeführt werden. Den Abgleich erneut ausführen.	x	o	o
WHITE; NG HARD ERROR TRY AGAIN	Weißabgleich nicht ausführbar, da die Bezugsspannung der Einstellung nicht gespeichert werden kann. Den Abgleich erneut ausführen. *	x	o	o
WHITE; NG TIME LIMIT TRY AGAIN	Weißabgleich nicht innerhalb der definierten Abgleichszeit möglich. Den Abgleich erneut ausführen. *	x	o	o
WHITE; NG C.TEMP. LOW CHG. FILTER TRY AGAIN	Weißabgleich aufgrund zu niedriger Farbtemperatur nicht möglich. Ein geeignetes Filter wählen und den Abgleich erneut ausführen.	x	o	o
WHITE; NG C.TEMP. HIGH CHG. FILTER TRY AGAIN	Weißabgleich aufgrund zu hoher Farbtemperatur nicht möglich. Ein geeignetes Filter wählen und den Abgleich erneut ausführen.	x	o	o

Anzeige	Bedeutung	Betriebsart		
		1	2	3
BLACK; OP R.BLK SET	Schwarzabgleich wird momentan ausgeführt. Folgende Abgleichpunkte werden angezeigt: B.BLK SET, G.BLK SET, R.BLK BAL, B.BLK BAL.	x	o	o
BLACK; OK	Schwarzabgleich beendet.	x	o	o
BLACK; NG HARD ERROR TRY AGAIN	Schwarzabgleich nicht möglich, da die Bezugsspannung der Einstellung nicht gespeichert werden kann. Den Abgleich erneut ausführen. *	x	o	o
BLACK; NG OVER FLOW TRY AGAIN	Schwarzabgleich nicht möglich, da der Unterschied zwischen Bezugswert und momentanem Wert zu groß ist. Den Abgleich erneut ausführen. *	x	o	o
BLACK; NG TIME LIMIT TRY AGAIN	Schwarzabgleich nicht innerhalb der definierten Einstellzeit möglich. Den Abgleich erneut ausführen. *	x	o	o
BLACK; NG IRIS; NOT CLOSED TRY AGAIN	Schwarzabgleich nicht möglich, da die Blende nicht geschlossen war. Den Abgleich erneut ausführen.	x	o	o
BLACK; NG BOUNCING TOO LONG TRY AGAIN	Schwarzpegeleinstellung nicht innerhalb der definierten Zeit möglich. Die Einstellung erneut ausführen. *	x	o	o

* Erscheint wiederholt BLACK; NG oder WHITE; NG, so ist eine interne Überprüfung der Kamera erforderlich. Siehe hierzu Teil 2 ff.

1-10. DURCH CCD-WANDLER VERURSACHTE SONDEREFFEKTE

Verschmiereffekt

Dieser Effekt tritt auf, wenn die Aufnahmeszene eine sehr helle Punktlichtquelle enthält.

Moire-Muster

Bei Betrieb in hohen Temperaturen kann das gesamte Bild durch ein stationäres Moire-Muster leicht gestört sein.

Welleneffekt

Beim Aufnehmen von feinen, geraden Streifen können diese leicht wellenförmig erscheinen.

1-11. VORSICHTSMASSNAHMEN

Die Kamera stets mit großer Vorsicht behandeln

Nach der Verwendung der Kamera

Schalten Sie die an die Kamera angeschlossenen Geräte aus.

Verwendungs- und Aufbewahrungsplatz

Betreiben Sie die Kamera nicht an folgenden Plätzen, und bewahren Sie sie dort auch nicht auf:

- extrem heiße oder feuchte Plätze (erlaubter Temperaturbereich von -20°C bis $+45^{\circ}\text{C}$)
- Plätze, an denen die Kamera direkt der Sonnenbestrahlung, übermäßigem Staub und Erschütterungen ausgesetzt ist.

Bewahren Sie die Kamera waagrecht liegend auf und sorgen Sie für ausreichende Luftzirkulation.

Reinigen Sie das Sucherobjektiv mit einer handelsüblichen Objektiv-Reinigungsflüssigkeit.

Verwenden Sie keine Lösungsmittel wie Alkohol, Benzin oder Verdünner.

1-12. TECHNISCHE DATEN

Kamera	
Bildwandler	3-Chip-CCD, 2/3 Zoll, Zeilentransfer
System	RGB, 3 CCD-Elemente (mit Quarzfilter)
Spektralsystem	F1,4 prisma
Eingebaute Filter	1: 3200°K 2: 5600°K + 1/4ND 3: 5600°K 4: 5600°K + 1/16ND
Objektivfassung	Spezial-Bajonett
Videoausgang	PAL, 1,0 Vss, 75 Ohm, unsymmetrisch, Video positiv Zwei Ausgänge (TEST OUT, VTR)
Anschlüsse	VTR: 50 pol (Videoausgang, Mikrofonausgang, Synchronsignalausgang, Stromversorgungseingang) TEST OUT: BNC-Buchse LENS: 12 pol
Empfindlichkeit	2000 Lux bei f4,5 (typisch), 89,9% Refl.
Min. Beleuchtungsstärke	15 Lux (f1,4 +18 dB Verstärkung)
Video-Signal-Rauschabstand	55 dB (typisch)
Horizontalauflösung	550 Zeilen (in der Mitte)
Farbdeckung	unter 0,05% über den gesamten Bildschirm
Geometrische Verzerrungen	Keine
Stromversorgung	12 V Gleichspannung (10,5 V - 17 V)
Leistungsaufnahme	10,5 W
Betriebstemperatur	-20°C bis +45°C
Lagertemperatur	-20°C bis +60°C
Gewicht	3,2 kg mit Sucher
Abmessungen	Einheit: mm

Sucher	
Bildröhre	1,5-Zoll-Monochrome BRIGHT-Regler, CONTR-Regler, TALLY/ZEBRA ON/OFF-Schalter, PEAKING-Schalter, AUDIO/FILTER-Schalter, AUDIO CH-1-Regler
Auflösung	500 TV-Zeilen
Mikrofon	ausgeprägte Richtwirkung

Mitgeliefertes Zubehör	
Stativadapter	× 1
Verlängerungsplatte	× 1
Abzieher	× 1
Außenmikrofonadapter	× 1
L-förmiger Steckschlüssel (2,5 mm Ø)	× 1
L-förmiger Steckschlüssel (3 mm Ø)	× 1
50 pol Kappe	× 1
Regenschutz	× 1
Kappe für Schraubenlöcher	× 1
Schraube	× 2
Bedienungs- und Wartungsanleitung	× 1

Empfohlenes Zubehör	
Portabler Videorecorder der Betacam-Serie	
BVV-1PS, BVV-1APS, BVW-25P	
Kameraadapter CA-3	
Netzadapter AC-500CE	
Mikrofon C-74	
Kamerakabel CCZQ-2 (2 m),	
CCZQ-5 (5 m),	
CCZQ-10 (10 m),	
CCZ-2 (2 m),	
CCZ-10 (10 m)	

Änderungen, die dem technischen Fortschritt dienen, bleiben vorbehalten.

1-13. VERPACKUNG DER BVP-5P

1-14. BEDIENUNG DES BETACAM-SYSTEMS BVW-105P

1-14-1. Merkmale

Kompakt und leicht

Die Kamera BVP-5P (mit 3-Chip CCD-Bildwandler), der Videorecorder BVV-1PS/BVV-1APS, das Objektiv, der Akku und die Cassette wiegen zusammen nur etwa 8,95 kg.

Kabelloser Direktanschluß

Kamera, Videorecorder, Sucher, Akku, Mikrofon usw. können direkt (d.h. ohne Kabel) miteinander verbunden werden.

Geringe Leistungsaufnahme

Das System zeichnet sich durch geringe Leistungsaufnahme aus. Bei Zusammenschluß mit dem BVV-1PS/BVV-1APS ermöglicht ein Akku vom Typ NP-1 einen ca. 50 minütigen Betrieb.

Video- und Audio-Hinterbandkontrolle

Das Video- und Audio-Hinterbandkontrollsystem gestattet ein unmittelbares Überprüfen des Aufnahmebildes und -tons.

Hochqualitatives Bild

Das neuentwickelte Aufnahmesystem mit einer 1/2-Zoll-Betaformat-Cassette zeichnet sich durch eine Bildqualität aus, die der eines 1-Zoll-Videorecorders kaum nachsteht.

Eingebauter Zeitcode-Generator

Der eingebaute Zeitcode-Generator gestattet ein Aufnehmen des Zeitcodes während des Betriebs. Auch das Benutzer-Bit kann aufgezeichnet werden.

Unabhängige Zeitcodespur

Die Zeitcodespur ist von der Videospur getrennt, so daß Aufnehmen und Löschen des Zeitcodes mit einem Schnitt-Steuergerät möglich ist.

Zwei Tonkanäle

Der Ton vom eingebauten Mikrofon, von Außenmikrofonen oder von anderen Tonquellen kann auf zwei Tonkanälen getrennt aufgezeichnet werden.

Zusammenfügen von Einzelszenen

Dank einer speziellen Vertikalintervall-Timing Einrichtung können einzelne Aufnahmeszenen mit störungsfreien Schnittstellen aneinandergefügt werden.

Warnsystem

Bei Betriebsstörungen leuchten Warnanzeigen auf, und ein Warnton ist sowohl über Lautsprecher als auch über Ohrhörer zu hören.

Anzeige für verbleibende Aufnahmezeit

Im Sucher wird die Aufnahmerestzeit angezeigt.

Verwendung des Drahtlos-Mikrofonsystems

Ein Empfänger aus dem Sony Drahtlos-Mikrofonsystem kann angebracht werden.

Zusätzlicher Akku

Zusammen mit den im Akkufach der BVV-1PS/BVV-1APS eingesetzten Akku kann ein weiterer Akku verwendet werden.

Dolby *-C Rauschverminderungssystem für bessere Tonqualität

Das in diesem Gerät verwendete Dolby-C Rauschverminderungssystem liefert einen besseren Signal-Rauschabstand und einen größeren Dynamikbereich. Zum Einschalten des Dolby-Schaltkreises siehe Abschnitt 2 der BVV-1PS/BVV-1APS-Bedienungsanleitung.

Hinweis

Mit einem BVV-1PS der Serien-Nr. 49999 oder niedriger arbeiten die folgenden Funktionen nicht:

- Tonpegelanzeige im Sucher.
- AufnahmepegelEinstellung von Tonkanal 1.

* „Dolby“ und das Doppel-D-Symbol sind Warenzeichen der Dolby Laboratories Licensing Corporation. Das Dolby-Rauschverminderungssystem wird unter Lizenz der Dolby Licensing Corporation hergestellt.

1-14-2. Bestandteile des BVW-105P-Systems

Tragekoffer*
 L-förmiger Steckschlüssel (3 mm Ø)
 L-förmiger Steckschlüssel (2,5 mm Ø)
 Schrauben
 Regenschutz
 Abdeckblech für Schraubenlöcher
 Batteriefachdeckelband
 Abzieher
 50pol Kappen
 Zeitcodekabel

* Der Tragekoffer, wird beim Betacam-System BVW-105P mitgeliefert. Bei
 getrenntem Kauf des Videorecorders BVV-1PS/BVV-1APS und der Kamera
 BVP-5P ist dagegen kein Tragekoffer mitgeliefert.

1-14-3. Überprüfungen

Vor der Aufnahme wird empfohlen, die folgenden Punkte zu überprüfen, um sicherzustellen, daß das Betacam-System einwandfrei funktioniert. Zur Bildkontrolle verwenden Sie hierbei einen Farbmonitor.

1. Vorbereitung

1. Einen vollgeladenen Akku einsetzen.

2. POWER-Schalter → ON

3. Die HUMID-Anzeige darf nicht leuchten.

4. Den Akkuzustand überprüfen.
Den METER SELECT-Schalter auf BATT stellen und prüfen, ob der Instrumentenzeiger in die grüne Zone ausschlägt.

5. Falls erforderlich, den Zeitcode oder Benutzerbit einstellen.

6. Eine Cassette einsetzen.

- Sicherstellen, daß die Löschschutzsperre unten an der Cassette vorhanden ist.

2. Überprüfen der Kamera

1. Die Schalter wie folgt einstellen:

2. Den Sucher positionieren.

3. Überprüfen, ob die Farbbalken im Sucher erscheinen.

4. Den OUTPUT, CCD-Wähler auf BARS stellen. Dann den AUTO W/B BAL-Schalter auf WHT stellen, um die Anzeigebetriebsart zu ändern.

5. Den BRIGHT- und CONTR-Regler am Sucher so einstellen, daß die Farbbalken klar im Sucher zu sehen sind.

6. Den FILTER-Wähler nacheinander auf 1 → 2 → 3 → 4 stellen und überprüfen, ob der richtige Wert im Sucher angezeigt wird.

7. Den OUTPUT (DCC)-Wähler auf CAM stellen.

8. Die Kamera auf ein geeignetes Motiv richten.

9. Das Motiv am Fokusserring scharfstellen. Überprüfen, ob das Motiv auf dem Sucherschirm erscheint.

10. Die Funktion des Motorzooms überprüfen: Bei Drücken der Motorzoomtaste wird vom Weitwinkel- in den Telebereich gefahren und umgekehrt.

11. Auf manuellen Zoombetrieb schalten.

12. Die Funktion des manuellen Zooms prüfen: Beim Drehen des manuellen Zoomhebels wird vom Weitwinkel- in den Telebereich gefahren und umgekehrt.

13. Das Zoom auf Motorbetrieb schalten.

14. Die Kamera auf Motive mit unterschiedlicher Helligkeit richten und die Blendenaomatik überprüfen.

15. Auf manuelle Blendeneinstellung schalten.

16. Den Blendenring drehen und überprüfen, ob sich die Blende ändert.

17. Die Sofort-Automatik-Taste gedrückt halten, um kurz auf automatische Blendeneinstellung zu schalten. Die Kamera dann auf Motive verschiedener Helligkeit richten und die Funktion der Blendenaomatik überprüfen.

18. Auf automatische Blendeneinstellung schalten.

19. Den GAIN-Wähler auf 9, dann auf 18 stellen und überprüfen, ob sich die Blende schließt und die GAIN UP-Anzeige im Sucher aufleuchtet.

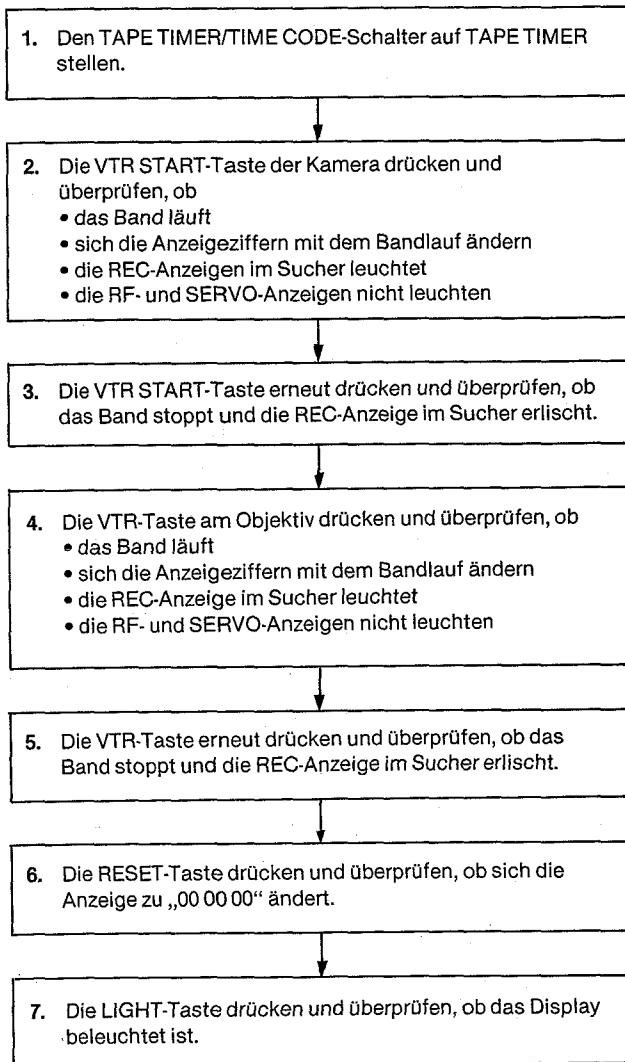

20. Den GAIN-Wähler auf 0 stellen.

21. Den AUDIO/FILTER-Schalter auf AUDIO stellen und überprüfen, ob die FILTER/AUDIO-Anzeige den Audiopegel anzeigt.

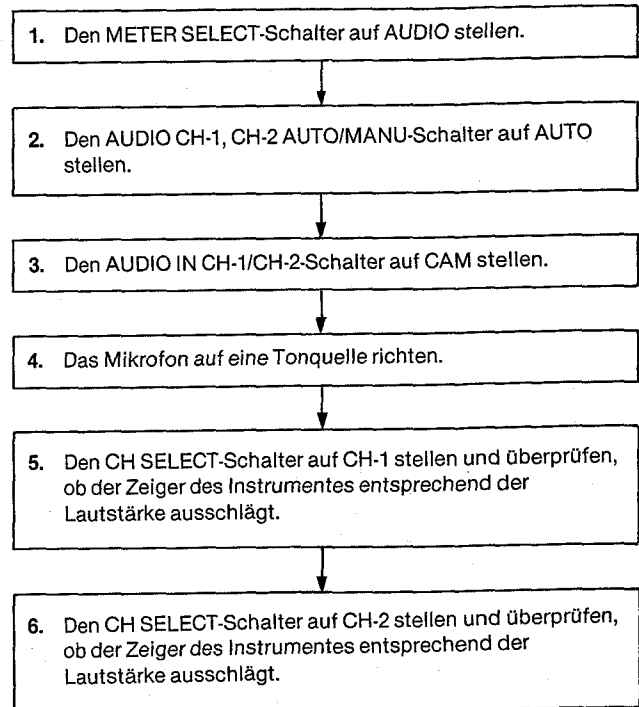

3. Überprüfen des Videorecorders

Führen Sie die Schritte 3-1. bis 3-5. der Reihe nach aus.

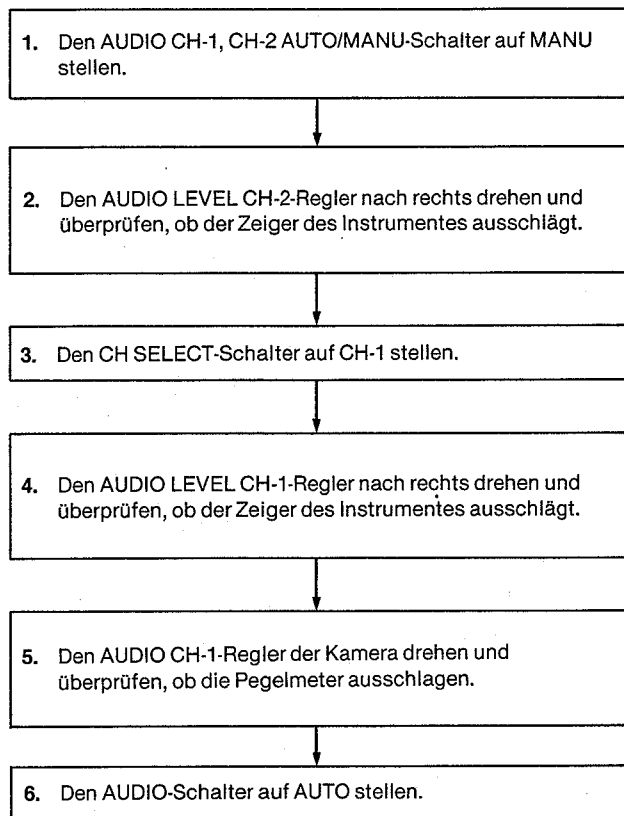

3-1. Überprüfen des Bandtransports

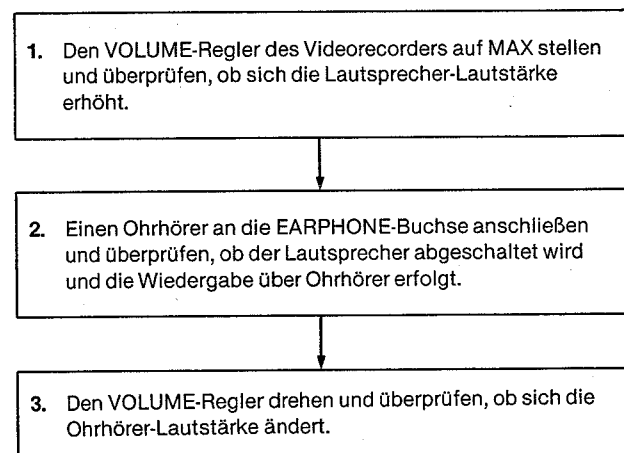

3-2. Überprüfen der automatischen Aufnahmepegel-einstellung

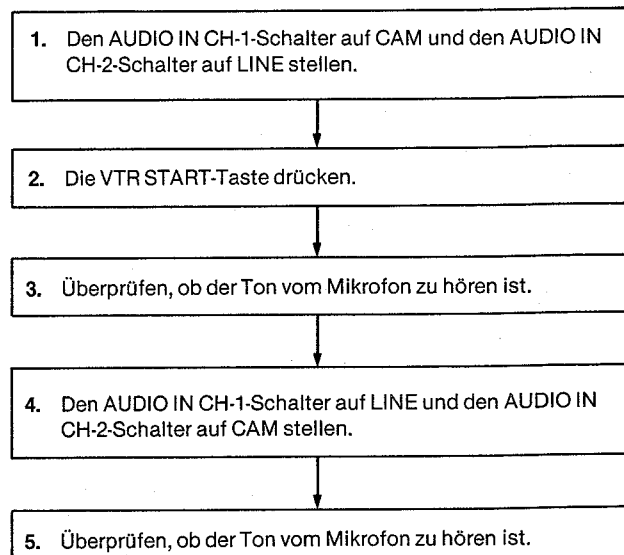

3-3. Überprüfen der manuellen Aufnahmepegel-einstellung

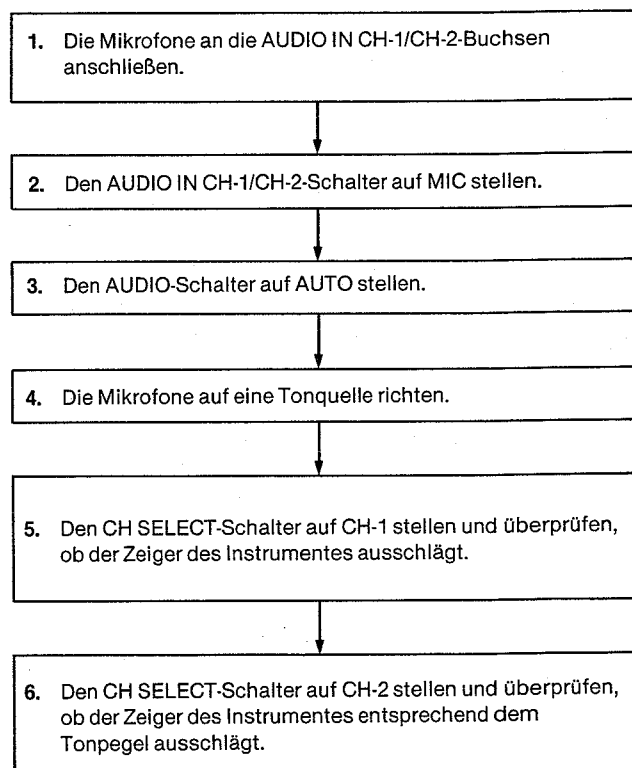

3-4. Überprüfen von Ohrhörer und Lautsprecher

3-5. Überprüfen der Audio-Hinterbandkontrolle

3-6. Überprüfen der Außenmikrofone

1-14-4. Bedienung

1. Vorbereitung

Überprüfen Sie vor der Inbetriebnahme, daß die Schalter wie unten gezeigt eingestellt sind.

2. Aufnahme

4. Den Weiß- und Schwarzabgleich ausführen.
Wenn der Weiß- und Schwarzabgleichwert gespeichert ist,
 den WHITE BAL-Schalter auf A oder B stellen.

Wenn kein Weiß- und Schwarzabgleichwert gespeichert ist, aber unmittelbar mit der Aufnahme begonnen werden soll,
 den WHITE BAL-Schalter auf PRESET und den AUTO W/B BAL-Schalter auf BLK stellen. Man erhält dann einen Weiß- und Schwarzabgleich für 3200°K.

Durchführung des Weiß- und Schwarzabgleichs

- 1) Den WHITE BAL-Schalter auf A oder B stellen.
 - 2) Zu einem weißen Gegenstand vorzoomen.
 - 3) Den AUTO W/B BAL-Schalter auf BLK stellen.
 Sobald die W/B CENT-Anzeige aufleuchtet, und BLACK: OK erscheint, ist der Weißabgleich ausgeführt worden.
 - 4) Den AUTO W/B BAL-Schalter auf WHT stellen und überprüfen, ob die W/B CENT-Anzeige leuchtet und WHITE: OK erscheint.
- Genauer zum Weiß- und Schwarzabgleich kann im Abschnitt „1-6. Einstellungen“ entnommen werden.

5. Die Kamera auf das Motiv richten, dann scharfstellen und das Zoom wunschgemäß einstellen.

1-14-6. Verwendung des Regenschutzes

Schutz des Betacam-Systems BVW-105P

Anbringen des regengeschützten Betacam-Systems BVW-105P auf einem Stativadapter

Wie in der Abbildung gezeigt, lassen Sie die Klettverschlüsse unter dem Videorecorder geöffnet.

Wenn das Betacam-System auf dem Stativ-Adapter angebracht ist, verschließen Sie die Klettverschlüsse.

Verwendung des Regenschutzes bei am Stativ-Adapter CA-3 angebrachten Betacam-System BVP-5P

SECTION 2 DESCRIPTION

2-1. BOARD LAYOUT

2-2. CONNECTORS

2-2-1. Connections

When cable with connectors are set to the respective connectors on service, the specified or equivalent connectors with cables, or the specified cable assemblies should be used, these are listed as follows.

Connector function	Parts No. and name of connector with code
TEST OUT (BNC)	1-560-069-11 PLUG, BNC
LENS (12P, FEMALE)	1-562-356-11 PLUG, 12P MALE
VF (20P, FEMALE)	1-558-609-11 CABLE SET ROUND TYPE (M)

2-2-2. Connector Signals

The main connector input/output signals as follows:

50PIN CONNECTOR

(EXTERNAL SIDE)

PIN No.	SIGNAL	SPECIFICATION
1	GENLOCK IN (X)	VBS SIGNAL 1 Vp-p Zi = 1k Ω
2	GENLOCK IN (G)	
3	+8.8V OUT	+8.8V
4	-5V OUT	-5V
5	UNREG (GND)	GND for UNREG
6	UNREG (GND)	
7	R VIDEO OUT	Zo = 75 Ω 0.7 Vp-p
8	G VIDEO OUT	
9	B VIDEO OUT	
10	RGB (GND)	GND for R, G, B VIDEO
11	(Spare)	
12	(Spare)	
13	(Spare)	
14	SD IN/OUT	Serial data for camera control

PIN No.	SIGNAL	SPECIFICATION
15	MIC OUT (G)	$Z_o \leq 600 \Omega$ -60 dBm balanced
16	MIC OUT (X)	
17	MIC OUT (Y)	
18	RET VIDEO IN (X)	
19	RET VIDEO IN (G)	
20	ZEBRA/AUDIO IN	AUDIO $Z_i \geq 1 k\Omega$
21	(Spare)	
22	TAPE IND 1 IN	ON: +4.5V OFF: GND or OPEN
23	TAPE IND 2 IN	
24	REC ALARM IN	ON: +5V OFF: +2.5V or 0V $Z_i \geq 20 k\Omega$
25	BATT IND IN	ON: +5V OFF: 0V or OPEN $Z_i = 300 \Omega$
26	PB REF IN	PB: +4.5V CAM: 0V or OPEN
27	VTR START/STOP OUT	START: +5V STOP: 0V or OPEN $Z_o \leq 10 k\Omega$
28	(Spare)	
29	R-Y VIDEO OUT (X)	$Z_o = 75 \Omega$ 0.7 Vp-p
30	B-Y VIDEO OUT (G)	
31	AUDIO CONT OUT	0V (0dB) ~ 7V (-20 dB)
32	VTR SAVE OUT	SAVE: +4.5 V STAND BY: 0V $Z_o \leq 10 k\Omega$
33	AUDIO MONITOR IN	No connection
34	SYNC (VTR) OUT	 5 Vp-p $Z_o \leq 100 \Omega$
35	(Spare)	
36	SHUT CLOSE IN	No connection
37	CF OUT	Color framing
38	RET VIDEO EN OUT	ENABLE: 0V DISABLE: +5V or OPEN
39	UNREG IN	+10.6 V ~ +17V
40	UNREG IN	
41	Y VIDEO OUT (X)	$Z_o = 75 \Omega$ 1.0 Vp-p
42	Y VIDEO OUT (G)	
43	VBS OUT (X)	VBS SIGNAL 1 Vp-p $Z_o = 75 \Omega$
44	VBS OUT (G)	
45	(Spare)	
46	(Spare)	
47	(Spare)	
48	(Spare)	
49	B-Y VIDEO OUT (X)	$Z_o = 75 \Omega$ 0.7 Vp-p
50	B-Y VIDEO OUT (G)

8	REMOTE/LOCAL OUT	0V
9	EXTENDER ON/OFF IN	ON: 0V OFF: +5V or OPEN
10	ZOOM POS IN	No connection
11	(SPARE)	
12	(SPARE)	

2-3. System Expansion

2-4. LEVEL CHECK SHEET

- Adjust the iris control so that the video level at CN1-34/VA-37 board is $0.13 \pm 0.01V_{p-p}$.
- Adjust the RV6 (G GAIN)/VA-37 board so that the video level at CN1-32/PR-78 board is $0.5 \pm 0.01V_{p-p}$.
- Adjust the RV2 (R GAIN)/VA-37 board so that the video level at CN1-7/PR-78 board is $0.5 \pm 0.01V_{p-p}$.
- Adjust the RV10 (B GAIN)/VA-37 board so that the video level at CN1-5/PR-78 board is $0.5 \pm 0.01V_{p-p}$.
- Set the S1 (TEST ON) to "ON".
- Adjust the RV5 (G TEST)/VA-37 board so that the video level at CN1-32/PR-78 board is $0.5 \pm 0.01V_{p-p}$.
- Adjust the RV1 (R TEST)/VA-37 board so that the video level at CN1-7/PR-78 board is $0.5 \pm 0.01V_{p-p}$.
- Adjust the RV9 (B TEST)/VA-37 board so that the video level at CN1-5/PR-78 board is $0.5 \pm 0.01V_{p-p}$.
- Adjust the RV10 (G γ BAL)/PR-78 board for such a position that the white peak level at CN1-17/PR-78 board does not change while setting S2 (G γ ON/OFF)/PR-78 board at ON or OFF.
- Adjust the RV1 (R γ BAL)/PR-78 board for such a position that the white peak level at CN1-18/PR-78 board does not change while setting S1 (R γ ON/OFF)/PR-78 board at ON or OFF.
- Adjust the RV19 (B γ BAL)/PR-78 board for such a position that the white peak level at CN1-16/PR-78 board does not change while setting S3 (B γ ON/OFF)/PR-78 board at ON or OFF.
- Adjust the RV18 (G GAIN)/PR-78 board so that the video level at CN1-16/EN-41 board is $0.7 \pm 0.01V_{p-p}$.
- Adjust the RV9 (R GAIN)/PR-78 board so that the video level at CN1-17/EN-41 board is $0.7 \pm 0.01V_{p-p}$.
- Adjust the RV28 (B GAIN)/PR-78 board so that the video level at CN1-15/EN-41 board is $0.7 \pm 0.01V_{p-p}$.

2-5. CIRCUIT DESCRIPTION

○ CCD CONTROL SYSTEM (TG-21/21P, DR-40, BI-6, PA-51 boards)

- TG-21/21P board
It sends the pulse for driving the CCD to DR-40 board and the pulse for sampling the video signal output from the CCD to PA-51 board. Driving pulse synchronizes with the synchronizing signal sent from SG-117/117P board.
14 MHz counted down from 28 MHz is also supplied to SG-117/117P board.
- DR-40 board
It converts the driving pulse sent from TG-21/21P board so as to drive the CCD directly. Converted pulse is sent to BI-6 board and transmitted to the CCD.
- BI-6 board
It mounts the CCD. Driving pulse and DC voltage for control are added to the CCD on the board.
The video signal output from the CCD is sent through the emitter follower to PA-51 board.
- PA-51 board
It eliminates the pulse component of the video signal sent from BI-6 board. Then the signal processings such as the black level fixing, phase offset adjustment for resolution improvement and amplification by preamplifier are performed on the board, then the video signal is sent to VA-37 board.

○ VIDEO SIGNAL SYSTEM (VA-37, IE-15/15P, PR-78, EN-41/41P boards)

- VA-37 board
It amplifies the video signal sent from PA-51 board and processes the black shading correction, gain-up control, blanking cleaning and white shading correction. It also selects the video signal or the TEST SAW signal.
- IE-15/15P board
It generates the detail signal obtained from G and R video signal so as to improve resolution. The detail signal is sent to PR-78 board, then added to R, G and B video signals.
G video signal is delayed by 1H, then sent to PR-78 board.
- PR-78 board
The masking signal and detail signal are added to R, G and B video signals respectively and the flare compensation, pedestal control, knee correction, white clipping and gamma correction are performed on the board.
Then the video signal is sent to EN-41/41P board.

• EN-41/41P board

It generates the luminance (Y) signal, color difference (B-Y, R-Y) signals and composite video (VBS) signal obtained from R, G and B video signals. It also supplies the SMPTE: NTSC (EBU: PAL) color-bar signals.

○ POWER SUPPLY SYSTEM (PS-129 board)

• PS-129 board

Externally supplied unregulated DC power is sent to the switching regulator, DC to DC converter and serial regulator to generate voltages of +8.8 Vdc, +5 Vdc and -5 Vdc for the respective boards.
It also supplies voltages for the VIEWFINDER and for CCD control.
Besides the current to cool the CCD is controlled on the board.

○ SYNCHRONIZING SIGNAL SYSTEM (SG-117/117P board)

• SG-117/117P board

It generates various synchronizing signals.
It detects the genlock signal automatically and synchronizes with it.

○ AUTOMATIC CONTROL SYSTEM (AT-42, PS-129 boards)

• AT-42 board

Microcomputer unit on AT-42 board sends to the control signal and compensation signal to appropriate boards in accordance with the selection of function switches.
It also detects the internal temperature, position of color temperature conversion filter, PEDESTAL control and video level automatically, then compensates the video signals and displays various warnings.

• PS-129 board

If contains the auto iris circuit and VTR-CAMERA interface circuit.
The former detects the video level at any time and adjusts the iris control.
The latter controls the input and output of the START/STOP control signal and warning signal between camera and VTR.

2-6. SWITCHES SETTING ON THE BOARD

[VA-37 board]

•S1 (GAIN SELECT)

By setting the GAIN selector (side panel) to "18", the video output level can be raised by 18 dB or 24 dB with this switch.

In this case, be sure to perform the +18 dB Black Set Adjustment for R, G and B video signals respectively.

•S2 (TEST)

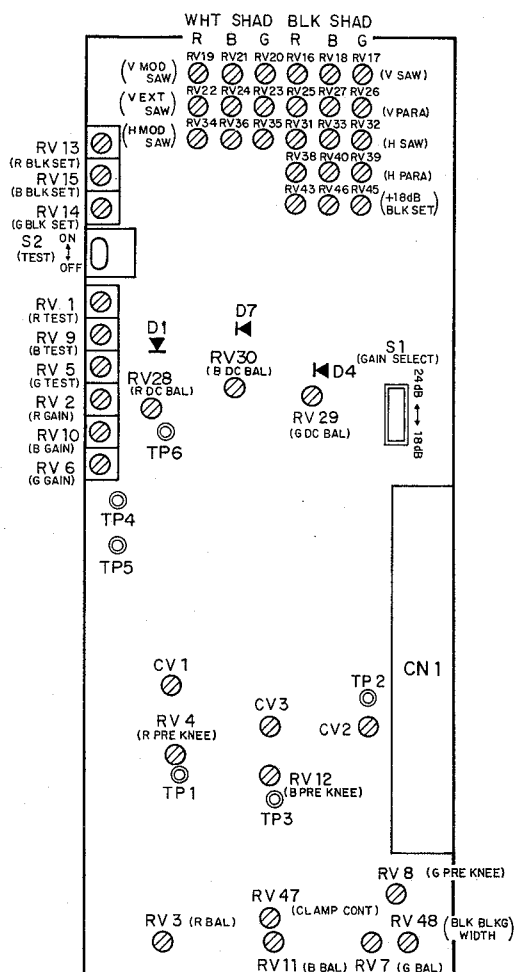

When turned on, the lens is automatically closed and the TEST SAW waveform is added to the video signal system. Normally set to "OFF".

[IE-15 board]

•S1 (DTL)

Selects whether the detail signal which the IE-15 board has generated for resolution improvement should be added to the video signal or not.

Turn on to add the detail signal.

VA-37 BOARD (COMPONENT SIDE)

IE-15/15P BOARD (COMPONENT SIDE)

[PR-78 board]

• S1 (R γ) S2 (G γ) S3 (B γ)

When turned on, the gamma correction is performed so that the overall characteristic of signals between camera and monitor is " $\gamma = 1$ ". Normally set to "ON".

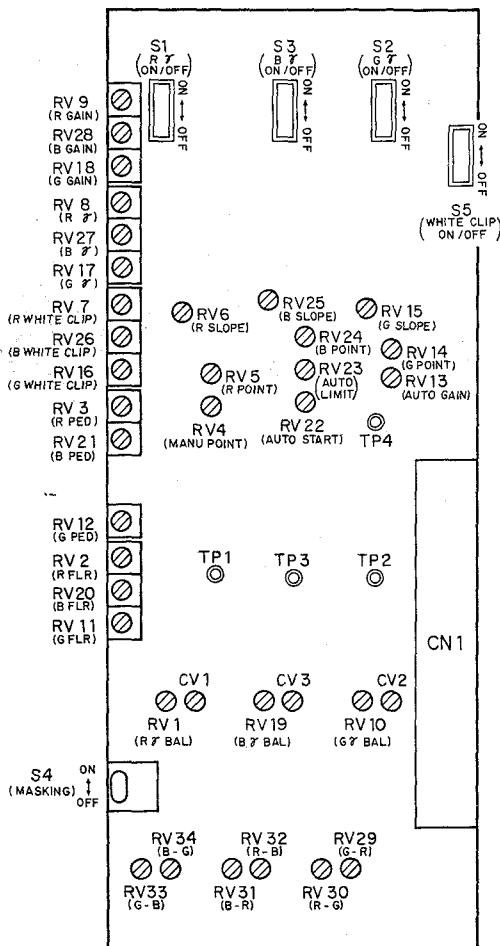

• S4 (MASKING)

Selects whether the masking signal to improve the color reproducibility should be added to the video signal system or not.

Turn on to add the masking signal.

• S5 (WHITE CLIP & KNEE)

When turned off, the white clipping and knee correction are automatically released. Use for the video signal system adjustment. Normally set to "ON".

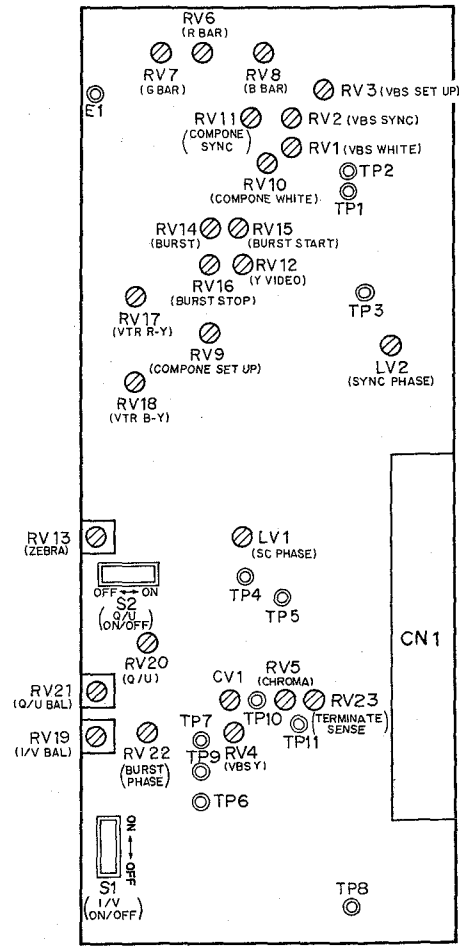

PR-78 BOARD (COMPONENT SIDE)

[EN-41 board]

• S1 (I/V) S2 (Q/U)

When turned on, the I (Q) signal is added to the encoder circuit. Use for the encoder circuit adjustment. Normally set to "ON".

EN-41/41P BOARD (COMPONENT SIDE)

[PS-129 board]

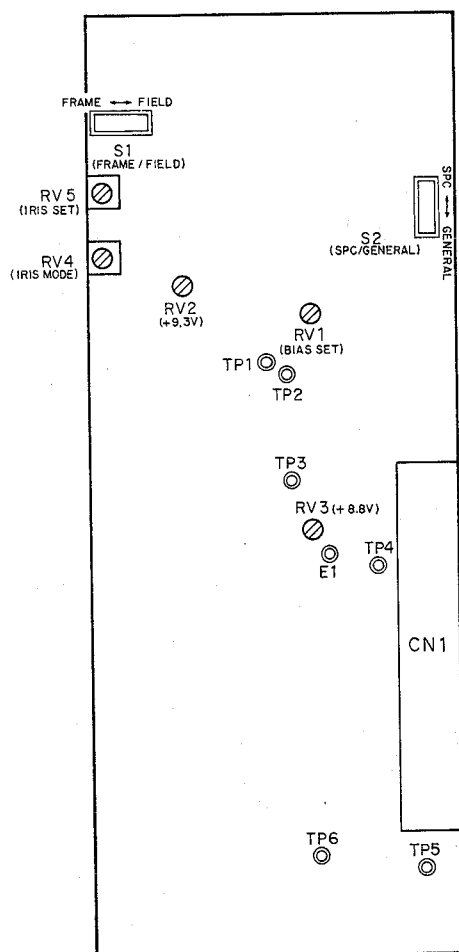

• S1 (FIELD/FRAME)

Selects the ways of CCD picture readout; "FIELD" or "FRAME". It has been set to "FIELD" at the factory.

• S2 (SPC/GENERAL)

Selects the modes of the REC lamp in the Viewfinder and TALLY lamp.

They operate ordinarily with the S2 switch set to "GENERAL". When set to "SPC", they operate as the W/B CENT lamp besides their ordinary functions.

PS-129 BOARD (COMPONENT SIDE)

[SG-117 board]

• S1 (H BLKG SELECT)

Adjusts the horizontal blanking width. It has been adjusted so as to be $10.9 \pm 0.2\mu\text{S};\text{N}$ ($12.05 \pm 0.25\mu\text{S};\text{P}$).

• S2 (V BLKG SELECT) ... NTSC only

Adjusts the vertical blanking width. It has been set to "20 H".

• S4 (COLOR FRAME)

When turned on, the color framing pulse is fed from pin 37 of 50-pin connectors.

• S5 (CABLE COMP)

When turned on, the cable length compensation is performed for the genlock signal externally supplied to camera.

• S6 (INT SC PHASE 0°/180°)

• S7 (EXT SC PHASE 0°/180°)

Adjusts the SC (subcarrier) phase for the SYNC signal. Switch over to shift the subcarrier phase 180°.

[AT-42 board]

•S1 (CHECK, FP INH)

CHECK

Setting this switch to "ON", the automatic control circuit enters the self-diagnostic mode.

(See 2-8. Self-diagnostic Function of Automatic Control System)

Normally set to "OFF (OPEN)".

FP INH

When set to "OFF (OPEN)", the values of the white balance adjusted at each filter position can be stored in the memory A and B independently. In short, up to 8 adjusted values; 4 for the memory A and 4 for the memory B can be stored. When set to "ON", only 2 adjusted values; one for A and one for B can be stored. In this case, the adjusted values will not correspond to the selection of the color temperature conversion filter. According to the selection of WHITE BAL switch (side panel), the white balance value is stored in the memory A and B or read out.

•S2 (MEMORY RESET)

By setting the CAMERA/VTR switch (side panel) to "OFF" and this switch to "RESET", the compensation data stored in the microcomputer can be reset. Normally set to "OPERATE".

AT-42 board (COMPONENT SIDE)

2-7. GAIN CHANGES

The gains of 0-9-18 dB can be selected with the GAIN selector (side panel) at the factory. But the video output level can be raised by 12 dB at the 9 position of GAIN selector and by 24 dB at the 18 position.

Therefore the gains can be set as follows.

- 0-9-18 dB
- 0-9-24 dB
- 0-12-18 dB
- 0-12-24 dB

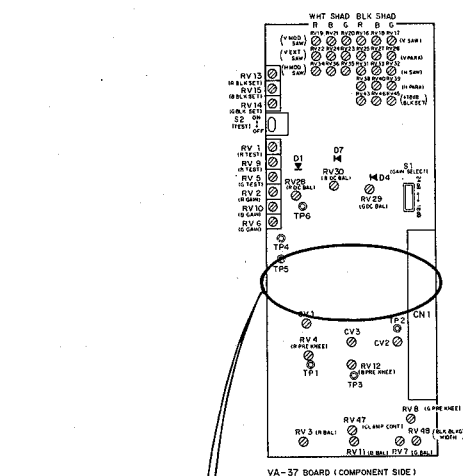

• Changing from 9 dB into 12 dB

Solder the metal film resistors of 1300 Ω (parts number: 1-214-560-00) to three locations (R9, R53, R92) on the VA-37 board as shown below.

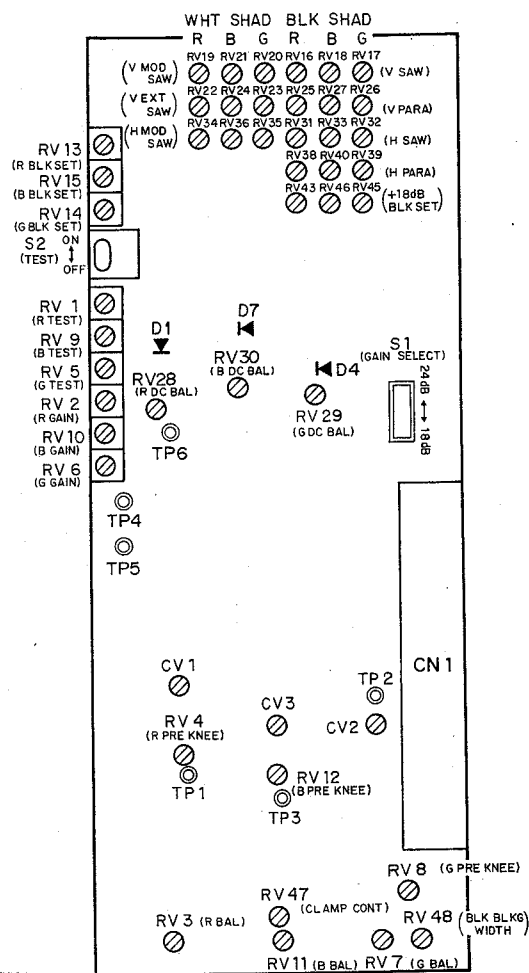

The video output level can be raised by 12 dB at the 9 position of GAIN selector (side panel).

• Changing from 18 dB into 24 dB

By setting the S1 (GAIN SELECT) switch on the VA-37 board to "24 dB", the video output level can be raised by 24 dB at the 18 position of GAIN selector (side panel). When the S1 switch is changed; 18 dB \rightarrow 24 dB or 24 dB \rightarrow 18dB, be sure to perform the +18 dB Black Set Adjustment.

VA-37 BOARD (COMPONENT SIDE)

VA-37 BOARD (COMPONENT SIDE)

2-8.SELF-DIAGNOSTIC FUNCTION OF AUTOMATIC CONTROL SYSTEM.

BVP-5/5P can diagnose the hardware of the automatic control system for itself by using the VF screen.

1. Set the **CHECK** switch of S1 (CHECK, FP INH)/AT-42 board to "ON".

AT-42 board (COMPONENT SIDE)

2. Confirm that the following message is displayed on the VF screen.

— SELF DIAG. —
PUSH AWB. SW.
PROCEED TO.
NEXT STEP

3. Set the AUTO W/B BAL switch (front panel) to "WHT" to advance the self-diagnostic mode to next step.
Set the switches, referring to the table on the next page.
4. When "NG" is indicated, check a related circuit.
5. Set the **CHECK** switch of S1 (CHECK, FP INH)/AT-42 board to "OFF" to return to the normal operation.

STEP	Setting	VF screen	Related circuit

SECTION 3

REPLACEMENT OF MAIN PARTS

3-1. CABINET REMOVAL

Remove the eight screws and remove the side panels.

3-2. REPLACEMENT OF CCD UNIT

1. Remove the left and right side panels referring to 3-1.
2. Remove the four screws and remove the AT-42 and SG-117 boards.
Remove the connectors of CN21, CN22, CN23 and CN12 on the HN-46 board.

3. Remove the four screws and remove the front block from BVP-5.

4. Remove the two screws and remove the shielding board as shown in the figure below.

5. Disconnect CN25 connector from the HN-46 board, CN1 connector from the DR-40 board, and CN1, CN2 connectors from the PA-51 board. Disconnect CN1 connector from SW-115 and CN1 connector from SW-116.

BVP-5 (UC)
BVP-5P (EK)

6. Remove each cover of the shielding cases.

7. Remove the two screws and extract the shielding case for PA-51 board. Disconnect CN5, CN4 and CN6 connectors from the PA-51 board.

8. Extract the TG-21 board in the direction of the arrow. Remove the two screws and the DR-40 board. Remove the shielding case lid screw and remove the earth lug.

9. Remove the shielding case (main). Remove the four screws from the front panel, two on front side and two on rear side.

10. Loosen a set screw of a filter knob using by a L shaped hexagonal wrench and remove the filter knob. Remove the four hexagon hole bolt and remove the CCD unit from the front panel.

11. When a new CCD unit is installed, carry out the opposite procedures to disassembly.

3-3. REPLACEMENT OF FILTER BLOCK

1. Carry out Step 1 to Step 9 in Replacement of CCD unit.
2. Remove the two screws as shown below and remove the Peltier assy.

3. Remove the two screws and pull out the Filter Block in the direction of arrow. When removing the filter block from the prism block, be sure to cover the upper part of the prism block with cloth or paper to prevent from dust.

4. When a new FILTER BLOCK is installed, carry out the opposite procedures to disassembly.

3-4. REPLACEMENT OF CONNECTORS

3-4-1. Replacement of VF Connectors

1. Carry out Step 1 to Step 5 in "3-2, Replacement of CCD Unit".
2. Disconnect CN20 connector on HN-46 board and CN4 connector on RG-14 board.

3. Remove two screws securing the VF connector to the camera and pull out the VF connector with harness attached. Remove the earth tube fixed with the VF connector.

4. When the new VF connector is installed, reverse the procedures.

3-4-2. Replacement of Lens Connector

1. Remove the left side panel, seeing "3-1, Cabinet Removal".
2. Remove two screws and remove AT-42 board and the shielding board. Disconnect CN2 connector on the AT-42 board.

3. Disconnect CN13 connector on HN-46 board.

4. Lay BVP-5 as shown in the figure and remove the shoulder pat and T shoe assy.

5. Remove two screws and remove the lid (B).

6. Remove two screws and remove the connector with harness attached.

BVP-5 (UC)
BVP-5P (EK)

3-5. REPLACEMENT OF FUNCTION SWITCHES

1. Remove the shoulder pat and T shoe assy.
Remove two screws (C) and remove the switch indication cover.

2. Remove nuts securing the switches and pull out SW-115 board with the switches attached.

3. Desolder the switch for removal and replace it.

3-6. REPLACEMENT OF CRT

1. Remove the 4 VF cover screws (A) and take off the cover. Next, remove a fixing screw (B) of the VF-26 Board and remove the Board.

2. Turn the VF Tube so that the anode cap of CRT is upward. Remove the screw (C) and take off the stopper and 2 lug plates. Cut a tie.

3. Remove the anode cap from the CRT. Remove the 2 fixing screws (D) and take off the LP-28 board.

4. Remove the 2 fixing screws (E) and take off the rotation supporter.

5. Cut a tie as illustrated.

7. Loosen the 2 CRT retaining screws (F) and remove the CRT from the VF Tube.

6. Pull the CRT out of the multiplier, and remove the CRT socket from the CRT. Disconnect the CN3 of VF-26 board.

8. Loosen the Deflection Yoke retaining screw (G) and remove the Deflection Yoke from the CRT.

9. Tape around the neck of new CRT where the Deflection Yoke is to be attached, with a mending tape.

10. Install the CRT into the viewfinder with the reverse procedures for removal. Then, take enough care of the harness arrangement. A wrong arrangement damages the harness when the viewfinder is in use. Refer to 3-7, Deflection Yoke Replacement (Step 4~7) for proper arrangement of the harness.

3-7. REPLACEMENT OF DEFLECTION YOKE

1. Remove the deflection yoke, referring to Step 1 to Step 7 in 3-6. Replacement of CRT.
2. Remove the fixing screw (G) and turn the deflection yoke 180° as illustrated. Replace the band of the deflection yoke with a new one.

3. Bind the bottom of four lead wires attached to the deflection yoke.

4. Insert the CRT into the deflection yoke. Arrange the CRT harness as illustrated and bind it with a tie at the end of the deflection yoke.

5. Bind the harness of the deflection yoke and the CRT harness to the deflection yoke with a tie. First bind the harness of the deflection yoke then the CRT harness.

6. Twist the harness of the deflection yoke two and half or three turns counterclockwise as illustrated, then push it in CN3 connector. Twist the CRT harness five or six turns counterclockwise, then push it in CN2 and CN8 connectors.

At this time, they should be twisted on the average.

7. When the deflection yoke is installed, reverse the procedures for removal. When respective harnesses are attached to the VF-26 board, arrange them as illustrated below.

3-8. HOW TO USE THE BOARD EXTRACTOR

Put the board extractor in a hole at the bottom of the board.

Move it in the direction shown by the arrow ①, then pull in the direction shown by the arrow ②.

3-9. WARNING OF PARTS REPLACEMENT

3-9-1. Precautions on Replacement of VTR Connector (50P Connector)

The VTR connector (50 pin connector) is attached using a high-precision.

Special tool (CV positioning) so as to keep the accurate positioning relation with VTR mount (C shoe) and to dock with any of BVV-1A or BVV-1PS/1APS.

Avoid to loosen or remove the screws for 50 P connector, C SHOE and stopper (in all, eight screws) It is necessary to adjust using a jig, when the above parts are replaced.

For replacement of the VTR connector (50-pin connector), contact your Sony dealer.

3-9-2. Warning of CCD Image Sensor Replacement

The BI-6 board on which the CCD is mounted had better not be removed.

When removing it, the CCD is sometimes broken by the static electricity.

If the CCD is broken, the whole CCD unit must be replaced.

3-10. REPLACEMENT OF CHIP PARTS

Capacitor

Covered with electrode.

Resistor

Not covered with electrode.

Diode and transistor

Tools required:

Soldering iron of approx. 20W

(Use a temperature controller, if possible, which can control the iron temperature to $270 \pm 10^\circ\text{C}$.)

Braided wire (SOLDER TAUL)

Solder (A solder of 0.6 mm in diameter is recommended.)

Tweezers

Soldering conditions:

Iron temperature of $270 \pm 10^\circ\text{C}$

A connector should be soldered within 2 seconds.

The chip parts removed should not be used again.

For details, refer to CHIP COMPONENTS MANUAL, Sony's parts No. 9-972-289-01 prepared by Sony Corporation.

Procedures

1. To remove a resistor or capacitor, place the tip of a soldering iron on chip parts to heat the parts, and then move it horizontally for removal while being desoldered. For removal of a diode or transistor, heat the one side, with two pins, of chip parts at the same time, set the parts up when desoldered, and remove the two pins. And then, remove the pin on another side.
2. Absorb solder by using a braided wire to smooth the land surface of board after removal.
3. Confirm by visual check that no pattern of the removed chip parts is peeled off and no adjacent parts is damaged or bridged.
4. Perform a thin pretinning on the pattern.
5. Place new chip parts on the pattern to solder its both sides.

SECTION 4

ALIGNMENT

4-1. PREPARATION

4-1-1. Jigs and Measuring Instruments

J-6026-100-A	Resolution Chart
	
J-6026-130-A	Gray Scale Chart
<p>Stick the velvet (black) at the both sides of white pattern in the center so as to avoid the light leakage.</p> 	
White Window Chart	
<p>Make a hole in the center of black paper as shown in the figure.</p> 	

J-6020-680-A	Pattern Box PTB-220 (190 to 220 Vac) with Color-bar Chart attached
	
A-7408-015-E	Tripod Adaptor

J-6196-080-B	DC Power Cord
Necessary without CA-3. 	
3-692-589-01	Board Extractor
	

Adaptor (Sony CA-3)
or (Sony AC-500CE or CMA-8CE)
Generator (Sony BVG-10P)

Measuring Instruments

- Oscilloscope
- Waveform Monitor
- Vectorscope
- Frequency Counter
- Digital Voltmeter
- B/W Monitor (H. Resolution: more than 700 TV lines)

4-1-2. Connection and Initial Setting

1. Before adjustments, set the CAMERA/VTR power switch to "ON/STBY" position and warm up for ten minutes.
2. Reset the compensation data in the microcomputer.
(See 4-1-3. Precautions of Adjustments)
3. Set the camera switches and controls as follows.
[Side Panel]

CAMERA/VTR power switch:	ON/STBY
GAIN selector	: 0
OUTPUT/DCC selector	: CAM/OFF
WHITE/BAL switch	: PRESET
FILTER selector	: 1 (3200°K)
IRIS AUTO/MANU selector	: MANU
IRIS control	: CLOSE
[IE-15P Board]	
S1 DTL	: OFF
[PR-78 Board]	
S4 MASKING	: OFF

4-1-3. Precautions on Adjustments

* Boards Extension

When IE-15P, VA-37, PR-78, EN-41P and PS-129 boards are extended, be sure to set the CAMERA/VTR power switch to OFF/SAVE position.

Extract boards, seeing 3-8. HOW TO USE THE BOARD EXTRACTOR.

* Procedure of Resetting Compensation Data

Before 4-4-11. Black Set • Pedestal Adjustment and 4-4-12. Flare Adjustment are carried out, the compensation data in the microcomputer must be reset in following order.

1. S2 (MEMORY RESET)/AT-42 board → RESET
2. CAMERA/VTR power switch (side panel) → OFF/SAVE
Keep this switch position for ten seconds.
3. CAMERA/VTR power switch (side panel) → ON/STBY
4. S2 (MEMORY RESET)/AT-42 board → OPERATE

When the AUTO W/B BAL switch is not set to BLK or WHT position, the compensation data remains cleared (initial condition).

When the S2 (MEMORY RESET)/AT-42 board switch is set to RESET position, the compensation data is reset whenever the CAMERA/VTR power switch is set to OFF/SAVE position. Set the S2 switch to RESET position during adjustment.

* SG-117P Board Adjustment

When 4-3-2. SYNC Width Adjustment, 4-3-5. H BLKG Adjustment and 4-3-6. INT SC Phase Adjustment are carried out, a screw driver with short handle is available for adjustments.

* Partial Adjustment

Overall adjustment is described in 4-2. POWER SUPPLY ADJUSTMENT to 4-6. AUTO SYSTEM ADJUSTMENT. When performing partial adjustment, refer to 4-8. PARTIAL ADJUSTMENT.

* Earthing Point

Use the GND terminal on the extension board, unless otherwise specified.

4-2. POWER SUPPLY ADJUSTMENT

- Note**
- The adjustment is not necessary if error is within $\pm 3\%$ of rated voltage.
 - When performing this adjustment, be sure to readjust all of the following (to 4-7. VIEWFINDER ADJUSTMENT).
 - Perform adjustments in order.

Equipment; Digital Voltmeter
To be extended; PS-129 board

4-2-1. DC Bias Adjustment

Test Point; TP1 (GND:TP2)/PS-129 board
Adj. Point; ● RV1 (BIAS SET)/PS-129 board
Spec.; $+1.83 \pm 0.01\text{Vdc}$

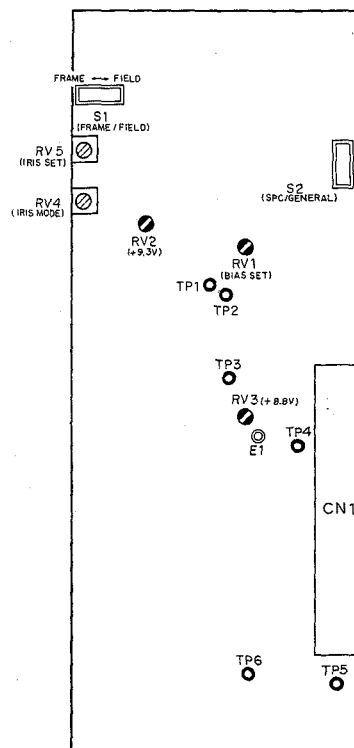

4-2-2. +9.3V Adjustment

Test Point; TP3 (GND:E1)/PS-129 board
Adj. Point; ● RV2 (+9.3V)/PS-129 board
Spec.; $+9.3 \pm 0.01\text{Vdc}$

4-2-3. +8.8V Adjustment

Test Point; TP4 (GND:E1)/PS-129 board
Adj. Point; ● RV3 (+8.8V)/PS-129 board
Spec.; $+8.8 \pm 0.01\text{Vdc}$

Note; After these adjustments are completed, confirm that the voltage at TP6 (GND:E1)/PS-129 board is $+5.0 \pm 0.2\text{Vdc}$ and the voltage at TP5 (GND:E1)/PS-129 board is $-5.0 \pm 0.2\text{Vdc}$

PS-129 BOARD (COMPONENT SIDE)

4-3. SYNCHRONIZING SIGNAL SYSTEM ADJUSTMENT

- Note**
- Before adjustment, set the CAMERA/VTR power switch to ON/STBY position and warm up for ten minutes.
 - Make sure that the camera is not in GENLOCK mode.

4-3-1. Subcarrier Frequency Adjustment

Equipment; Frequency Counter
(Connect the inductor of more than $100\mu\text{H}$ in series to between the probe of Counter and Test Point.)

To be extended; SG-117P Board

Test Point; TP26(GND:TP25)/extension board

Adj. Point; RV2 (SC FREQ)/SG-117P Board

Spec.; $4,433,619 \pm 5\text{Hz}$

S1
(H BLKG SELECT)

4-3-2. SYNC Width Adjustment (Serial No. 10011 ~)

Equipment; Waveform Monitor

To be extended; SG-117P Board

Preparation; ENC/REGI selector (side panel) → "ENC"

Adj. Point; RV1 (SYNC WIDTH)/SG-117P board

Spec.; SYNC Width $4.7 \pm 0.1\mu\text{S}$

Equalizing Pulse Width $2.3 \pm 0.1\mu\text{S}$

V BLKG

4-3-3. SYNC Phase Adjustment

Equipment; Oscilloscope

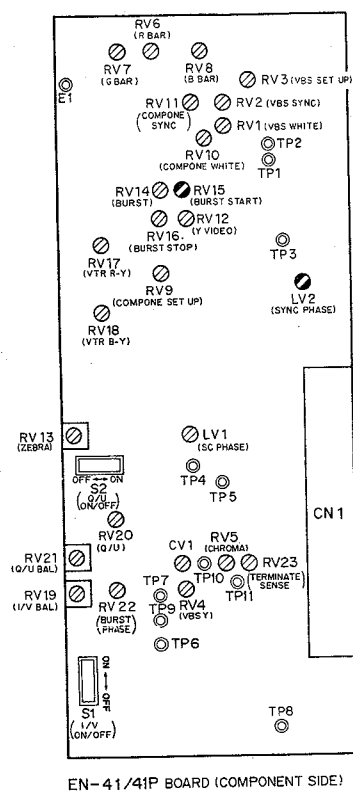

To be extended; EN-41P Board

Preparation; ENC/REGI switch (side panel) → "ENC"

Test Point; TP9(GND:TP11)/extension board

Adj. Point; ⓪ LV2 (SYNC PHASE)/EN-41P Board

Spec.; Rise and fall time $0.25 \pm 0.05 \mu\text{s}$
(Adjust so as to disappear the overshoot and undershoot.)

4-3-4. Burst Flag Adjustment

Equipment; Waveform Monitor

To be extended; EN-41P board

Preparation; ENC/REGI selector (side panel) → "ENC"

Test Point; TEST OUT terminal

Adj. Point; ⓪ RV15 (BURST START)/EN-41P board

4-3-5. H BLKG Adjustment

Equipment; Waveform Monitor

To be extended; SG-117P Board

Preparation; • ENC/REGI selector (side panel) → "ENC"
• AUTO/MANU switch of Pattern Box → "AUTO"

• Shoot so that the white window frame touches the underscanned picture frame on the monitor.

Adjust the iris control so that the video level at TEST OUT terminal is 0.7 V.

Test Point; TEST OUT terminal

Adj. Point; S1 (H BLKG SELECT)/SG-117P Board

Spec.; $A = 12.05 \pm 0.25 \mu\text{s}$

4-3-6. INT SC Phase Adjustment

Equipment; CF Pulse Generator (Sony BVG-10P)
Connection;

To be extended; SG-117P Board

Preparation; Selector of BVG-10P → "SOURCE CHECK"

Adjustment; Adjust \bullet RV5 (INT SC PHASE)/SG-117P board so that the LED lamp of BVG-10P lights at center.

4-4. VIDEO SIGNAL SYSTEM ADJUSTMENT

4-4-1. H BLKG Balance Adjustment *Seite 6-8 Block*

Equipment; Oscilloscope

To be extended; VA-37 board

Preparation; Remove the shielding case of PA-51 board
(left side).

Set the iris control to "CLOSE".

Trigger; HD (TP25/extension board)

1. Adjust ● CV1 (G H BLKG BAL)/PA-51 board so that the waveform at TP34 (GND:TP33)/extension board is nearly flat.
2. Adjust ● CV2 (R H BLKG BAL)/PA-51 board so that the waveform at TP36 (GND:TP35)/extension board is nearly flat.
3. Adjust ● CV3 (B H BLKG BAL)/PA-51 board so that the waveform at TP32 (GND:TP31)/extension board is nearly flat.

Working for Black-level etc.

Note; After this adjustment is completed, install the shielding case.

4-4-2. DC Balance Adjustment

Equipment; Oscilloscope (DC MODE)

To be extended; VA-37 board

Preparation; $\begin{matrix} \bullet \text{ RV6 } \boxed{\text{G GAIN}} \\ \bullet \text{ RV2 } \boxed{\text{R GAIN}} \\ \bullet \text{ RV10 } \boxed{\text{B GAIN}} \end{matrix} \left. \vphantom{\begin{matrix} \bullet \text{ RV6 } \boxed{\text{G GAIN}} \\ \bullet \text{ RV2 } \boxed{\text{R GAIN}} \\ \bullet \text{ RV10 } \boxed{\text{B GAIN}} \end{matrix}} \right\} \text{VA-37 board} \rightarrow \text{mechanical center}$

Trigger; HD (TP25/extension board)

1. Adjust \bullet RV29 (G DC BAL)/VA-37 board so that the DC level at the cathode of D4 or TP5 (GND:E1)/VA-37 board is $1.3 \pm 0.2 \text{Vdc}$.
2. Adjust \bullet RV28 (R DC BAL)/VA-37 board so that the DC level at the cathode of D1 or TP4 (GND:E1)/VA-37 board is $1.3 \pm 0.2 \text{Vdc}$.
3. Adjust \bullet RV30 (B DC BAL)/VA-37 board so that the DC level at the cathode of D7 or TP6 (GND:E1)/VA-37 board is $1.3 \pm 0.2 \text{Vdc}$.

Note; After adjustment is completed, be sure to carry out 4-4-3. VA Gain Adjustment.

4-4-3. VA Gain Adjustment

- Note**
- Be sure to complete 4-4-2. DC Balance Adjustment, or this adjustment will become invalid.
 - Use a white pattern chart for this adjustment. Adjust the lighting so that the white area is exactly 3200°K of color temperature.
 - When the pattern box is used, well maintained pattern box should be used.

Object; White Pattern Chart (3200°K)

Equipment; Oscilloscope

To be extended; VA-37 board

Trigger; HD (TP25/extension board)

1. Adjust the iris control and shoot the chart as shown below.

Monitor Screen

2. Adjust the iris control so that the white level at TP34 (GND:TP33)/extension board is $0.13 \pm 0.01 \text{Vp-p}$.

3. Adjust \odot RV6 **G GAIN**/VA-37 board so that the white level at TP9/extension board is $0.5 \pm 0.01V_{p-p}$.
4. Adjust \odot RV2 **R GAIN**/VA-37 board so that the white level at TP7/extension board is $0.5 \pm 0.01V_{p-p}$.
5. Adjust \odot RV10 **B GAIN**/VA-37 board so that the white level at TP5/extension board is $0.5 \pm 0.01V_{p-p}$.

4-4-4. Test Signal Waveform Adjustment

Note; Be sure to complete 4-4-3. VA Gain Adjustment, or this adjustment will become invalid.

Equipment; Oscilloscope

To be extended; VA-37 board

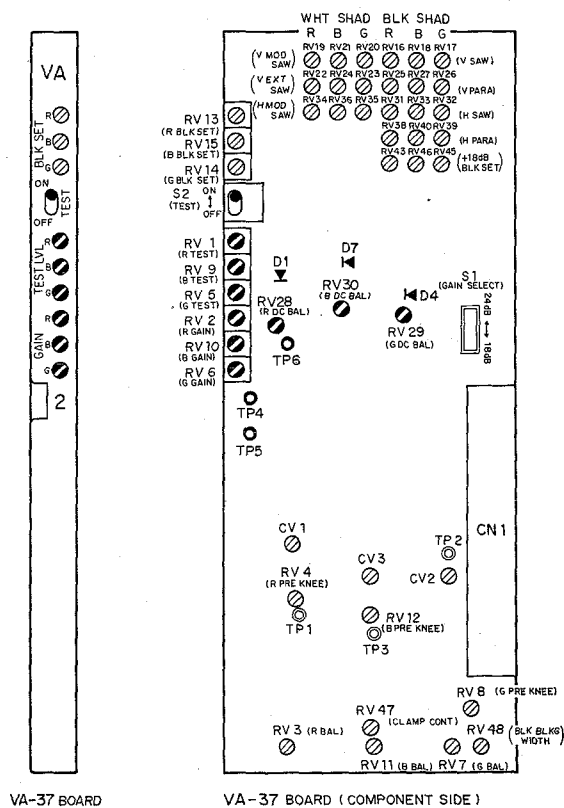

Preparation; S2 **TEST**/VA-37 board \rightarrow "ON"

Trigger; HD (TP25/extension board)

1. Adjust \odot RV5 **G TEST**/VA-37 board so that the peak level at TP9/extension board is $0.5 \pm 0.01V_{p-p}$.
2. Adjust \odot RV1 **R TEST**/VA-37 board so that the peak level at TP7/extension board is $0.5 \pm 0.01V_{p-p}$.
3. Adjust \odot RV9 **B TEST**/VA-37 board so that the peak level at TP5/extension board is $0.5 \pm 0.01V_{p-p}$.

Note; After this adjustment is completed, set the S2 **TEST**/VA-37 board to "OFF".

4-4-5. Pre Knee Adjustment

Equipment; Oscilloscope

To be extended; VA-37 board

Preparation; • S1 (GAIN SELECT)/VA-37 board → "+18dB"

- S2 [TEST]/VA-37 board → "ON"
- GAIN selector (side panel) → "18"

Trigger; HD (TP25/extension board)

1. Adjust ● RV8 (G PRE KNEE)/VA-37 board so that the peak level at TP9/extension board is $1.65 \pm 0.03V_{p-p}$.
2. Adjust ● RV4 (R PRE KNEE)/VA-37 board so that the peak level at TP7/extension board is $1.65 \pm 0.03V_{p-p}$.
3. Adjust ● RV12 (B PRE KNEE)/VA-37 board so that the peak level at TP5/extension board is $1.65 \pm 0.03V_{p-p}$.

Note; After this adjustment is completed, set the GAIN selector (side panel) to "0" and S2 [TEST]/VA-37 board to "OFF".

4-4-6. Modulator Balance Adjustment

Equipment; Oscilloscope

To be extended; VA-37 board

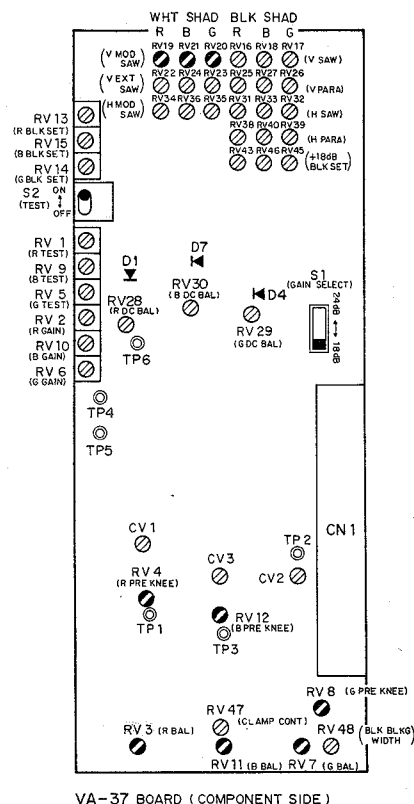

Preparation; Set the iris control to "CLOSE"

Trigger; VD (TP26/extension board)

1. Adjust ● RV7 (G BAL)/VA-37 board so that the waveform at TP9/extension board does not change even if ● RV20 (G-V MOD SAW)/VA-37 board is turned both clockwise and counterclockwise.
2. Adjust ● RV3 (R BAL)/VA-37 board so that the waveform at TP7/extension board does not change even if ● RV19 (R-V MOD SAW)/VA-37 board is turned both clockwise and counterclockwise.
3. Adjust ● RV11 (B BAL)/VA-37 board so that the waveform at TP5/extension board does not change even if ● RV21 (B-V MOD SAW)/VA-37 board is turned both clockwise and counterclockwise.

Note; After this adjustment is completed, be sure to carry out 4-4-10. White Shading Adjustment.

VA-37 BOARD (COMPONENT SIDE)

4-4-7. Gamma Balance Adjustment

Note; Be sure to complete 4-4-4. Test Signal Waveform Adjustment, or this adjustment will become invalid.

Equipment; Oscilloscope

To be extended; PR-78 board

Preparation; • S2 **TEST**/VA-37 board → "ON"

• S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"

Trigger; HD (TP25/extension board)

1. Adjust \odot RV10 (G γ BAL)/PR-78 board so that the peak level at TP17/extension board does not change even if the S2 (G γ)/PR-78 board is set to ON or OFF.
2. Adjust \odot RV1 (R γ BAL)/PR-78 board so that the peak level at TP18/extension board does not change even if the S1 (R γ)/PR-78 board is set to ON or OFF.
3. Adjust \odot RV19 (B γ BAL)/PR-78 board so that the peak level at TP16/extension board does not change even if the S3 (B γ)/PR-78 board is set to ON or OFF.

γ : ON

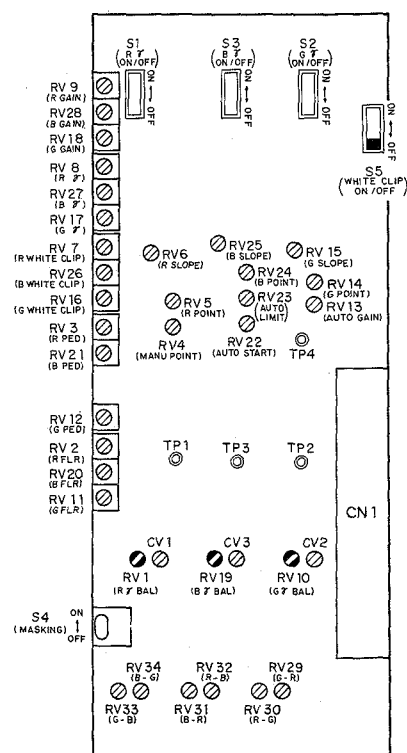

A = B

γ : OFF

Note; After this adjustment is completed, set the switches as follows.

- S1 (R γ)
- S2 (G γ)
- S3 (B γ)
- S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"
- S2 **TEST**/VA-37 board → "OFF"

PR-78 BOARD (COMPONENT SIDE)

4-4-8. Carrier Balance Adjustment

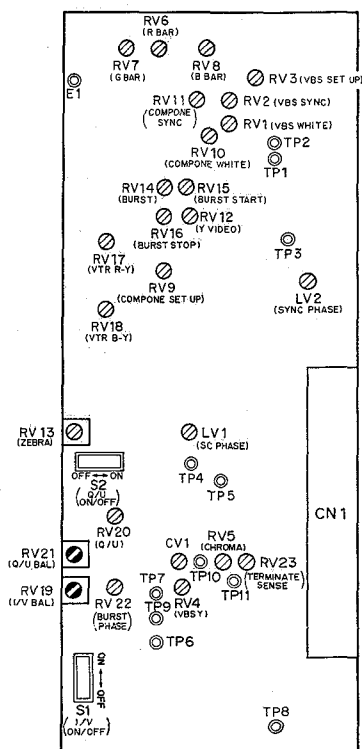

Equipment; Vectorscope (MAX GAIN)

Preparation; • OUTPUT/DCC selector (side panel) →
"BARS/OFF"

1. Adjust \odot RV19 V BAL and \odot RV21 U BAL /EN-41P board so as to center the black beam spot on the vectorscope.

EN-41P BOARD
(PANEL SIDE)

EN-41/41P BOARD (COMPONENT SIDE)

4-4-9. Black Shading Adjustment

Equipment; Waveform Monitor (LUM MODE)

To be extended; VA-37 board

Preparation; • Set the iris control to "CLOSE"

- GAIN selector (side panel) → "18"
- ENC/REGI selector (side panel) → "REGI"
- Adjust the PEDESTAL control (side panel) so that the pedestal level is approx. 70mV.

Zeile 23 beobachten / wenn nur halbe Amplitude / oder schwarzer Streifen an oberen Bildrand

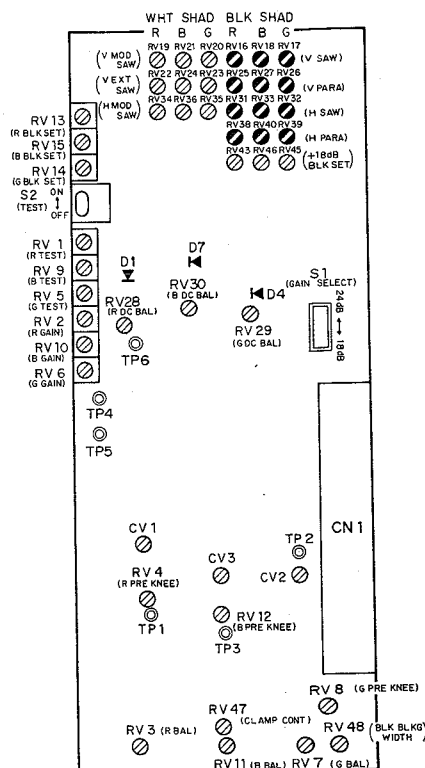

RV 48 VIF Board / also eingestellt

4-6-2 / Seite 4-36

1. When the shading occurs, adjust the respective RV controls so that the waveform is flat as shown below.

	Switches Setting (side panel)	Adjusting Point/VA-37 board			
		H SAW	V SAW	H PARA	V PARA
G	G/OFF/-G → G R/OFF/B → OFF	RV32	RV17	RV39	RV26
R	G/OFF/-G → OFF R/OFF/B → R	RV31	RV16	RV38	RV25
B	G/OFF/-G → OFF R/OFF/B → B	RV33	RV18	RV40	RV27
TEST OUT terminal					

Note: After this adjustment is completed, set the GAIN selector (side panel) to "0" and PEDESTAL control (side panel) to the mechanical center.

4-4-10. White Shading Adjustment

Note; Be sure to complete 4-4-6. Modulator Balance Adjustment, or this adjustment will affect the black shading adjustment.

Object; White Window Chart

Equipment; Waveform Monitor

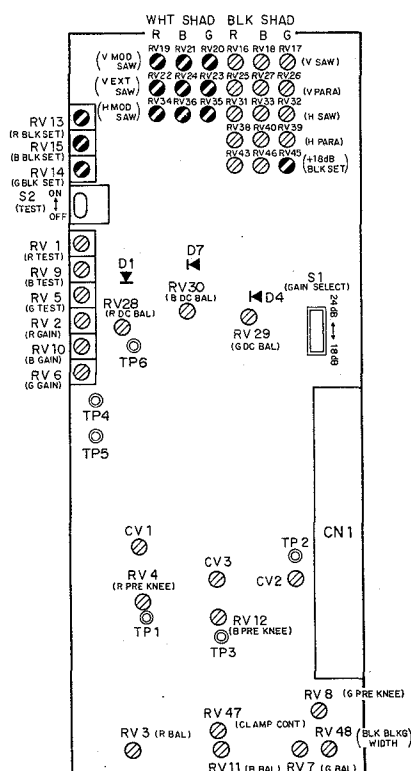

To be extended; VA-37 board

Preparation; • ENC/REGI selector (side panel) → "REGI"
• S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"

1. Set the zoom control at TELE and shoot the white area of white window chart.
2. Adjust the iris control so that the video level at the TEST OUT terminal is 0.7 V.
3. When the shading occurs, adjust the respective RV controls so that the waveform is flat as follows.

Note; When using the lens with the EXTENDER attached, carry out the V EXT SAW adjustment. Before this adjustment, set the EXT lever of lens at X2 position and adjust the iris control so that the video level at TEST OUT terminal is 0.7 V. After this adjustment is completed, set the EXT lever at X1 position.

	Switches Setting (side panel)	Adjusting Point/VA-37 board		
		H MOD SAW	V MOD SAW	V EXT SAW
G	G/OFF/-G → G R/OFF/B → OFF	RV35	RV20	RV23
R	G/OFF/-G → OFF R/OFF/B → R	RV34	RV19	RV22
B	G/OFF/-G → OFF R/OFF/B → B	RV36	RV21	RV24
TEST OUT terminal				

4-4-11. Black Set • Pedestal Adjustment

Note: Be sure to reset the compensation data in the microcomputer, or this adjustment will become invalid. (See 4-1-3. Precautions on Adjustments)

Equipment; Waveform Monitor, Vectorscope (MAX GAIN)

To be extended; VA-37 board

Precaution; • Set the iris control to "CLOSE".
• ENC/REGI selector (side panel) → "REGI"
• G/OFF/-G selector (side panel) → "G"
• R/OFF/B selector (side panel) → "OFF"
• Adjust the PEDESTAL control (side panel) so that the pedestal level is approx. 70mV.

1. Adjust ⚙ RV14 **G BLK SET**/VA-37 board so that the pedestal level does not change even if the GAIN selector is set to "0" or "9".
2. Adjust ⚙ RV45 (G +18dB BLK SET)/VA-37 board so that the pedestal level does not change even if the GAIN selector is set to "0" or "18".

0dB

9dB

18dB

3. • GAIN selector → "0"
• Extend the PR-78 board.
4. Adjust PEDESTAL control (side panel) so that the DC level at TP6/extension board is 2.5 ± 0.1 Vdc.
5. • Extend the VA-37 board.

6. Adjust ⚙ RV12 **G PED** /PR-78 board so that the pedestal level is 20mV.

7. • ENC/REGI selector (side panel) → "ENC"
8. Adjust ⚙ RV3 **R PED** and ⚙ RV21 **B PED** /PR-78 board so as to center the beam spot on the vectorscope.

9. • GAIN selector (side panel) → "9"
10. Adjust ⚙ RV13 **R BLK SET** and ⚙ RV15 **B BLK SET** /VA-37 board so as to center the beam spot on the vectorscope.

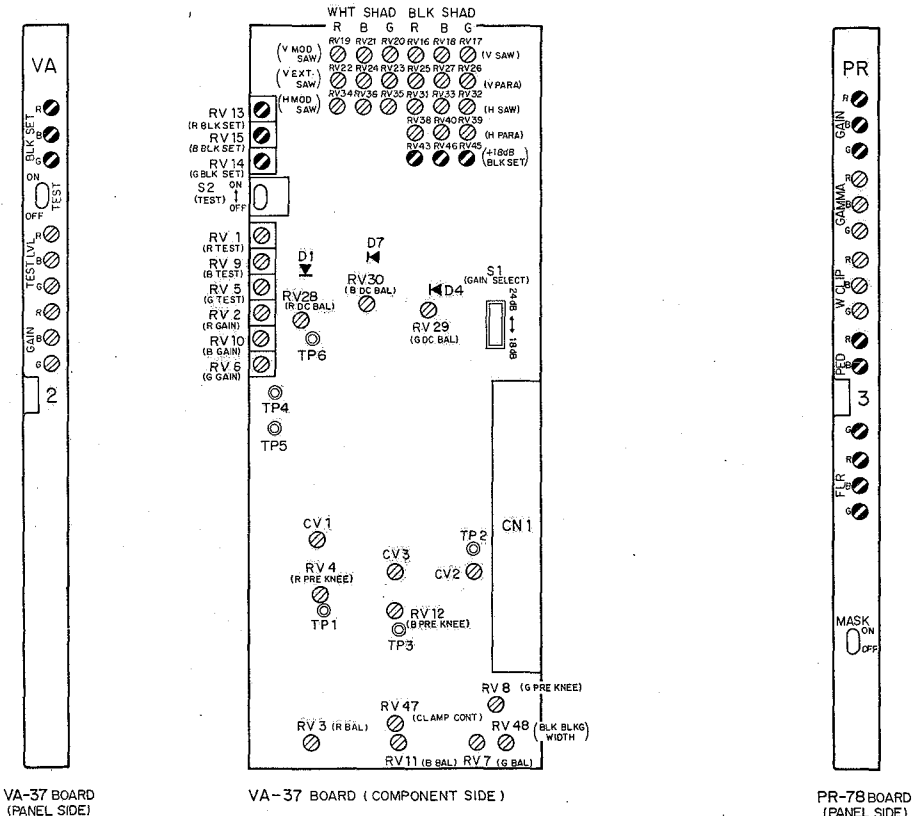

- 11. • GAIN selector (side panel) → "18"
- 12. Adjust ● RV43 (R +18 dB BLK SET) and ● RV45 (B +18 dB BLK SET)/VA-37 board so as to center the beam spot the vectorscope.

- 13. Repeat Step 8 to Step 12 so as to center the beam spot on the vectorscope, even if the GAIN selector (side panel) is set to "0", "9" or "18".

Note; After this adjustment is completed, set the GAIN selector (side panel) to "0".

4-4-12. Flare Adjustment

Object; Gray Scale Chart
Equipment; Waveform Monitor

Preparation; • As shown below, stick non-reflective and non-photoconductive cloth (such as velvet) as a reference of the black level.
• ENC/REGI selector (side panel) → "ENC"
• RV11 **G FLR**/PR-78 board → fully counterclockwise

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7V.
3. Open the iris control 1 more stop than F value of Step 2.
4. Adjust RV2 **R FLR** and RV20 **B FLR**/PR-78 board so that the carrier leakage of black level is minimized.

Minimize the carrier leakage

Besser zuerst auf "Reg" und nur Grün mit RV11 einstellen, danach auf Enc. und RV2/20 nachziehen auf Minimum carrier leakage

4-4-13. PR Gain Adjustment

Note; Be sure to complete 4-4-7. Gamma Balance Adjustment, or this adjustment will become invalid.

Equipment; Oscilloscope, Waveform Monitor
To be extended; PR-78 board

Preparation; • S2 **TEST**/VA-37 board → "ON"
• S1 (R γ) } /PR-78 board → "ON"
• S2 (G γ) }
• S3 (B γ) }
• S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"

Trigger; HD (TP25/extension board)

1. Adjust RV18 **G GAIN**/PR-78 board so that the peak level at TP17/extension board is 0.7 ± 0.02 Vp-p.

2. • ENC/REGI selector (side panel) → "ENC"
3. Adjust RV9 **R GAIN** and RV28 **G GAIN** so that the carrier leakage of the peak level at TEST OUT terminal is minimized.

Minimize the carrier leakage

Note; After this adjustment is completed, set the S2 **TEST** switch/VA-37 board to "OFF" and the S5 (WHITE CLIP & KNEE)/PR-78 board to "ON".

4-4-14. REGI Video Level Adjustment

Note; Be sure to complete 4-4-13. PR Gain Adjustment, or this adjustment will become invalid.

Equipment; Waveform Monitor

Preparation; • ENC/REGI selector (side panel) → "REGI"
• G/OFF/-G selector (side panel) → "G"
• R/OFF/B selector (side panel) → "OFF"
• S2 **TEST** switch/VA-37 board → "ON"
• S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"

1. Adjust **RV1** (REGI)/RG-14P board so that the peak level at TEST OUT terminal is $0.7 \pm 0.01V$.

Note; After this adjustment is completed, set the S2 **TEST** /VA-37 board to "OFF" and the S5 (WHITE CLIP & KNEE)/PR-78 board to "ON".

4-4-15. EN Y Level Adjustment

Note: Be sure to complete 4-4-14. REGI Video Level Adjustment, or this adjustment will become invalid.

Equipment; Waveform Monitor

To be extended; EN-41P board

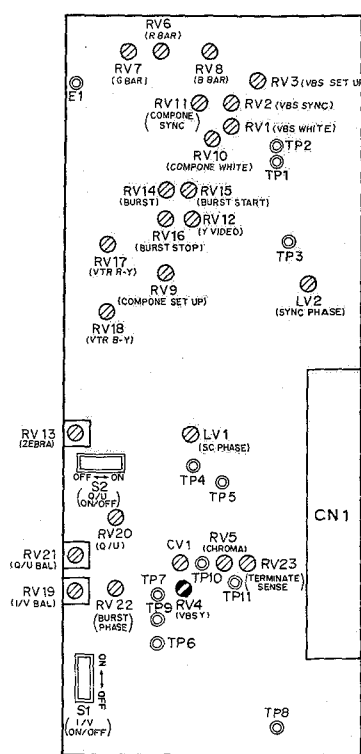

Preparation; • ENC/REGI selector (side panel) → "REGI"
 • S2 **TEST** switch/VA-37 board → "ON"
 • S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"

1. Adjust \odot RV4 (VBS Y)/EN-41P board so that the peak level at TEST OUT terminal is $0.7 \pm 0.01V$.

Note: After this adjustment is completed, set the switches as follows.

- S2 **TEST** switch/VA-37 board → "OFF"
- S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"

EN-41/41P BOARD (COMPONENT SIDE)

4-4-16. Gamma Correction Adjustment

Note; Be sure to complete 4-4-13. PR Gain Adjustment, or this adjustment will become invalid.

Object; Gray Scale Chart
Equipment; Waveform Monitor
To be extended; PR-78 board

Preparation; • ENC/REGI selector (side panel) → "REGI".
• G/OFF/-G selector (side panel) → "G"
• R/OFF/B selector (side panel) → "OFF"
• S1 (R γ) } /PR-78 board → "ON"
• S2 (G γ) }
• S3 (B γ) }
• S5 (WHITE CLIP & KNEE)/PR-78 board → "OFF"

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Adjust RV17 (G γ CORR)/PR-78 board so that the cross point level of the waveform signal at TEST OUT terminal is $0.4 \pm 0.02V$.

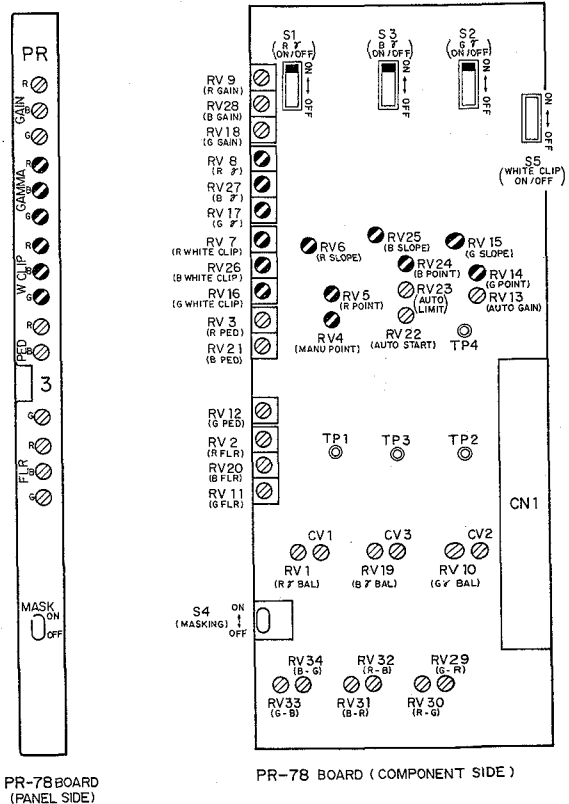

4. • ENC/REGI selector (side panel) → "ENC"
• S2 **TEST** switch/VA-37 board → "ON"
5. Adjust RV8 (R γ CORR) and RV27 (B γ CORR)/PR-78 board so that the carrier leakage at TEST OUT terminal is minimized.

Minimize the carrier leakage

Note; After this adjustment is completed, set the S2 **TEST**/VA-37 board to "OFF" and S5 (WHITE CLIP & KNEE)/PR-78 board to "ON".

4-4-17. Knee • White Clip Adjustment

Equipment; Waveform Monitor, Oscilloscope (DC MODE)

To be extended; PR-78 board

Preparation; • OUTPUT/DCC selector (side panel) →

"CAM/OFF"

- ENC/REGI selector (side panel) → "REGI"
- G/OFF/-G selector (side panel) → "G"
- R/OFF/B selector (side panel) → "OFF"
- S2 **TEST** switch/VA-37 board → "ON"
- S1 (R γ)
- S2 (G γ) } /PR-78 board → "ON"
- S3 (B γ)
- S5 (WHITE CLIP & KNEE)/PR-78 board → "ON"

- ⌚ RV14 (G POINT) } /PR-78 board → mechanical center

- ⌚ RV6 (R SLOPE)
- ⌚ RV25 (B SLOPE)
- ⌚ RV16 (G WHITE CLIP) } /PR-78 board → fully counter-clockwise
- ⌚ RV7 (R WHITE CLIP)
- ⌚ RV26 (B WHITE CLIP)

* Manual Knee • White Clip Adjustment

1. Turn ⌚ RV4 (MANU POINT)/PR-78 board from the rightmost position counterclockwise slowly until the TEST SAW waveform stops clipping.

2. • ENC/REGI selector (side panel) → "ENC"
- GAIN selector (side panel) → "9"

Alle Einstellungen beeinflussen die DCC
Nach Gamma / Knee / White Clip
Auf jeden Fall einstellen (Punkt 12-15)

3. Adjust ⌚ RV5 (R POINT) and ⌚ RV24 (B POINT)/PR-78 board so that the carrier leakage at the knee point of the TEST SAW waveform is minimized.

4. • ENC/REGI selector (side panel) → "REGI"
5. Adjust ⌚ RV15 (G SLOPE)/PR-78 board so that the peak level of the TEST SAW waveform is $0.78 \pm 0.01V$.

6. • ENC/REGI selector (side panel) → "ENC"
7. Adjust ⌚ RV6 (R SLOPE) and ⌚ RV25 (B SLOPE)/PR-78 board so that the carrier leakage of the TEST SAW waveform is minimized.

8. • ENC/REGI selector (side panel) → "REGI"
- GAIN selector (side panel) → "18"
9. Adjust ● RV16 (G-WHITE CLIP)/PR-78 board so that the TEST SAW waveform clips at $0.75 \pm 0.01V_{p-p}$.

* Auto Knee Adjustment

12. • GAIN selector (side panel) → "0"
- OUTPUT/DCC selector (side panel) → "CAM/ON"
- ENC/REGI selector (side panel) → "ENC"
- ● RV23 (AUTO LIMIT)/PR-78 board →

mechanical center

13. Adjust ● RV22 (AUTO START)/PR-78 board so that the DC level at TP4/PR-78 board is $1.3 \pm 0.01 V$.

10. • ENC/REGI selector (side panel) → "ENC"
11. Adjust ● RV7 (R WHITE CLIP) and ● RV26 (B WHITE CLIP)/PR-78 board so that the carrier leakage of the TEST SAW waveform is minimized.

14. • GAIN selector (side panel) → "18"
15. Adjust ● RV13 (AUTO GAIN)/PR-78 board so that the knee point of the TEST SAW waveform is $0.6 \pm 0.01V$.

Note: After this adjustment is completed, set the switches as follows.

- GAIN selector (side panel) → "0"
- OUTPUT/DCC selector (side panel) → "CAM/OFF"
- S2 TEST/VA-37 board → "OFF"

Nach DCC-Einstellung

4-25

4-4-19. U.V. Gain Adjustment

Equipment; Vectorscope

To be extended; EN-41P board

Preparation; • OUTPUT/DCC selector (side panel) → "CAM/OFF"

- S1 (V) → "ON" } /EN-41P board
- S2 (U) → "OFF" }

Note; After this adjustment is completed, set the switches as follows.

- OUTPUT/DCC selector (side panel) → "CAM/OFF"
- S1 (V) → "ON" } /EN-41P board
- S2 (U) → "ON" }

1. Adjust the PHASE control of the vectorscope so that the V signal is overlapped with the V axis on the vectorscope.
2. Adjust ● RV5 (VBS CHROMA)/EN-41P board so that the beam spots at both ends of the V signal are overlapped with the scale of the vectorscope.

3. • S1 (V) → "OFF" } /EN-41 board
- S2 (U) → "ON" }
4. Adjust the PHASE control of the vectorscope so that the U signal is overlapped with the U axis on the vectorscope.
5. Adjust ● RV20 (U)/EN-41P board so that the beam spots at both ends of the U signal are overlapped with the scale of the vectorscope.

4-4-20. Burst Adjustment

Equipment: Vectorscope

To be extended: EN-41P board

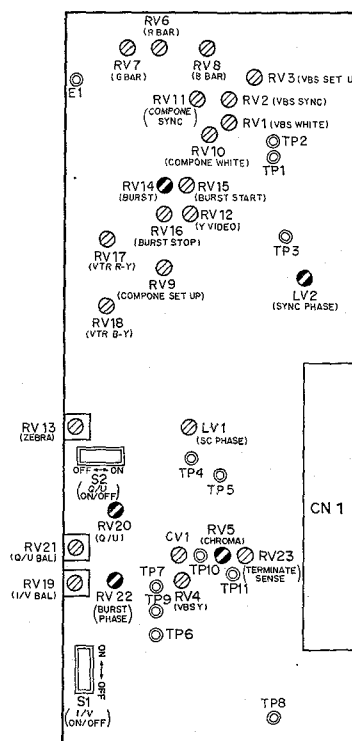

Preparation: OUTPUT/DCC selector (side panel)

→ "BARS/OFF"

1. Adjust the PHASE control of the vectorscope, \odot RV14 (BURST), \odot RV22 (BURST PHASE) and \odot LV2 (SC PHASE)/EN-41P board so that the beam spot of the burst signal is overlapped with the 75% scale on the vectorscope.

Note: After this adjustment is completed, set the OUTPUT/DCC selector (side panel) to "CAM/OFF".

EN-41/41P BOARD (COMPONENT SIDE)

4-4-21. VTR Y Adjustment

Equipment: Oscilloscope

To be extended: EN-41P board

Preparation: OUTPUT/DCC selector (side panel)

→ "CAM/OFF"

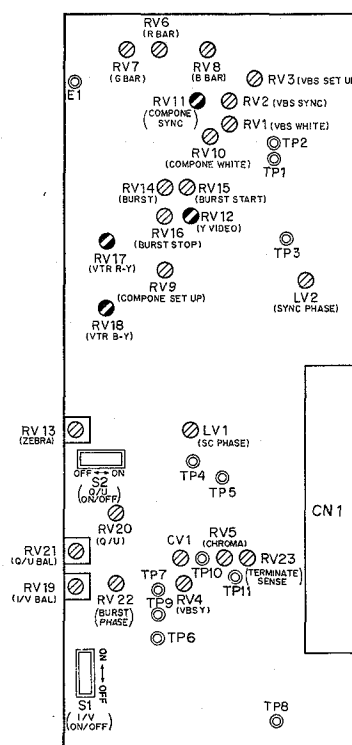

Test Point: TP21/extension board

Trigger: HD (TP34/extension board)

1. Adjust \odot RV12 (Y VIDEO)/EN-41P board so that the white level is 0.7 ± 0.01 V.
2. Adjust \odot RV11 (COMPONE SYNC)/EN-41P board so that the SYNC level is 0.3 ± 0.01 V.

Note: After this adjustment is completed, set the OUTPUT/DCC selector (side panel) to "CAM/OFF".

EN-41/41P BOARD (COMPONENT SIDE)

4-4-22. VTR R-Y Adjustment

Equipment: Oscilloscope

To be extended: EN-41P board

Preparation: OUTPUT/DCC selector (side panel)
→ "BARS/OFF"

EN-41/41P BOARD (COMPONENT SIDE)

4-5. DETAIL SIGNAL SYSTEM ADJUSTMENT

To be extended; IE-15P board

Preparation; • ENC/REGI selector (side panel) → "ENC"
• S1 DTL/IE-15P board → "ON"

4-5-1. White Clip Adjustment

Object; White Window Chart

Equipment; Oscilloscope

Preparation; • GAIN selector (side panel) → "9"

1. Adjust the zoom control and shoot the white window chart as shown below.

Monitor Screen

2. Open the lens iris slowly and Adjust ● RV1 (MOD WHITE CLIP)/IE-15P board so that the waveform at TP6/extension board clips at $1.5 \pm 0.1V_{p-p}$.

Note: After this adjustment is completed, set the GAIN selector (side panel) to "0"

4-5-2. V DTL Null Adjustment

Object; Gray Scale Chart

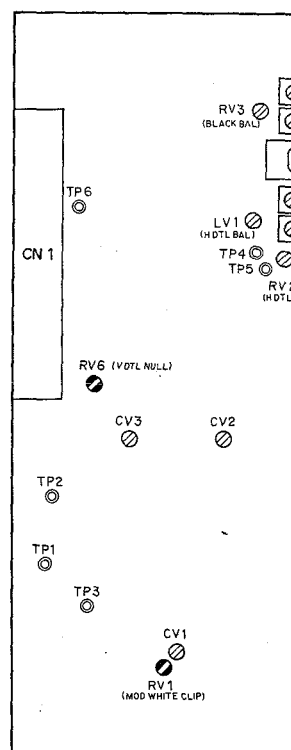

Equipment; Waveform Monitor, Oscilloscope

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Adjust ● RV6 (V DTL NULL)/IE-15P board so that the waveform at TP5/IE-15P board is flat.

IE-15/15P BOARD (COMPONENT SIDE)

IE-15P BOARD (PANEL SIDE)

4-5-3. 1H, 2H DELAY Signal Phase Adjustment

Object; White Window Chart
Equipment; Waveform Monitor, Oscilloscope

1. Adjust the zoom control and shoot the white window chart as shown below.

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Adjust \odot CV2 (1H FREQ RESP) and \odot CV3 (2H FREQ RESP)/IE-15P board so that the waveform at TP5/IE-15P board is flat.

4-5-4. H DTL Adjustment

Object; White Window Chart
Equipment; Waveform Monitor, Oscilloscope

1. Adjust the zoom control and shoot the white window chart as shown below.

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Adjust \odot RV2 (H DTL: NULL)/IE-15P board so that the waveform at TP4/IE-15P board is flat.

4. \odot RV5 DTL/IE-15P board \rightarrow \odot fully clockwise
5. Adjust \odot LV1 (H DTL BAL)/IE-15P board so that the portion A and B of the waveform at TP4/IE-15P board are same in level.

Note; After adjustment is completed, be sure to carry out 4-5-5. Black Balance Adjustment.

4-5-5. Black Balance Adjustment

Object; Gray Scale Chart

Equipment; Waveform Monitor, Oscilloscope

Preparation; ⚙ RV4 **CRISPENING** →

⌚ fully counterclockwise

⚙ RV5 **DTL** → ⌚ fully clockwise

⚙ RV8 **LEVEL DEPEND** →

⌚ fully counterclockwise

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Adjust ⚙ RV3 (BLACK BAL)/IE-15P board so that the waveform at TP6/IE-15P board is flat.

Note; After adjustment is completed, be sure to carry out 4-5-6. Level Dependent Adjustment.

Preparation; • ENC/REGI selector (side panel) → "REGI"
• G/OFF/-G selector (side panel) → "G"
• R/OFF/B selector (side panel) → "OFF"

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Adjust ⚙ RV8 [LEVEL DEPEND] /IE-15P board so that the detail signal is not added to the portion A of the waveform at TEST OUT terminal.

4-5-7. H/V RATIO • Detail Level Adjustment

Object; Gray Scale Chart

Equipment; Waveform Monitor

Preparation; ⚙ RV5 [DTL] /IE-15P board → fully clockwise

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Adjust ⚙ RV7 (H/V RATIO) /IE-15P board so that the H and V detail amounts to be added are equivalent.

4. Set the detail level according to the users' request by adjusting ⚙ RV5 [DTL] /IE-15P board.

Note; After adjustment is completed, be sure to carry out 4-5-7. H/V RATIO • Detail Level Adjustment.

4-5-8. Resolution Adjustment

Object; Resolution Chart
Equipment; Waveform Monitor

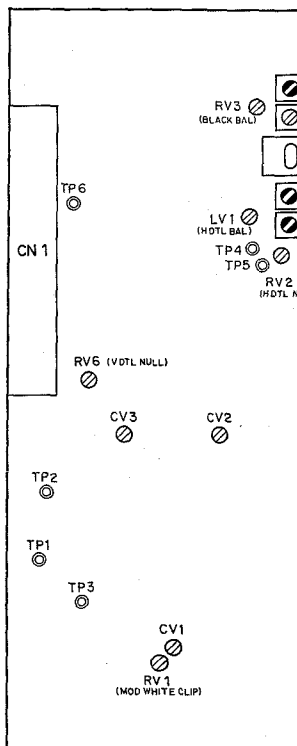

1. Adjust the zoom control so that the resolution chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

*Multiburst Chart
Detail on / maximum
B/W Monitor
auf minimum Ablesung
im 5MHz Bereich.*

2. Adjust the iris control so that the white level at TEST OUT terminal is 0.7 V.
3. Pan the camera slightly so as to obtain the best resolution.
4. Adjust RV1 (SHD π PHASE)/TG-21P board so as to obtain the best obtained.
5. Repeat Step 3 and Step 4 until the resolution of more than 550 TV lines can be seen on the monitor.

IE-15/15P BOARD (COMPONENT SIDE)

IE-15/15P BOARD (PANEL SIDE)

4-6. AUTOMATIC CONTROL SYSTEM ADJUSTMENT

4-6-1. Power Save Adjustment

Equipment; Digital Voltmeter

To be extended; EN-41P board

Test Point; Pin 5 of IC12, or TP11 (GND:E1)/EN-41P board

Adj. Point; ● RV23 (TERMINATE SENSE)/EN-41P board

Spec.; $-0.45 \pm 0.1 \text{ Vdc}$

Note; Confirm that the waveform at TP8/extension board is fed when the ENC/REGI selector (side panel) is set to "ENC" and it is not fed when the selector is set to "REGI".

4-6-2. Black Width Adjustment

Equipment; Waveform Monitor

To be extended; VA-37 board

Preparation; • Set the iris control to "CLOSE".

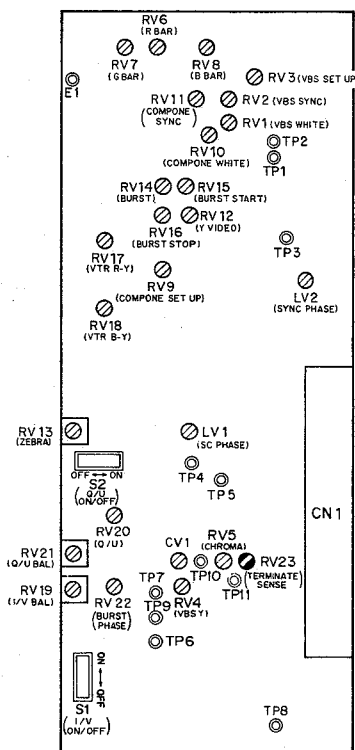

• Adjust the CONTRAST control of the monitor so as to obtain the most contrasty picture.

• ENC/REGI selector (side panel) → "REGI"

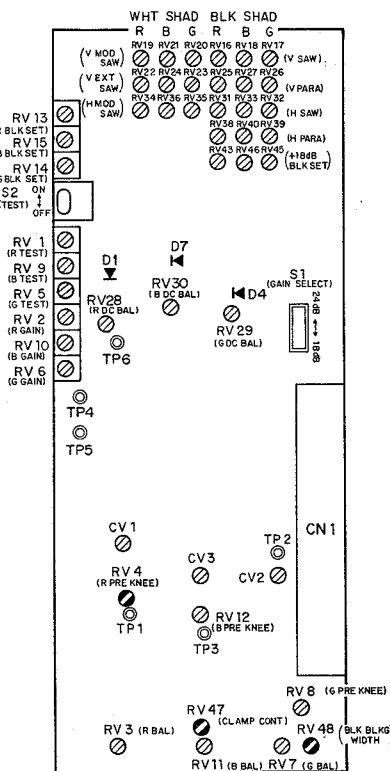

• G/OFF/-G selector (side panel) → "G"

• R/OFF/B selector (side panel) → "OFF"

1. Turn ● RV48 (BLK WIDTH)/VA-37 board from the rightmost position counterclockwise slowly until the waveform is flat.

EN-41/41P BOARD (COMPONENT SIDE)

VA-37 BOARD (COMPONENT SIDE)

PS-129 BOARD (PANEL SIDE)

4-6-3. Clamp Control Adjustment

Object; White Window Chart

To be extended; VA-37 board

Preparation; • AUTO/MANU switch (Pattern Box) → "AUTO"

1. Adjust the zoom control and shoot the white window chart as shown below.

Monitor Screen

2. • Set the iris control to F2.8.
• GAIN selector (side panel) → "18"
• RV47 (CLAMP CONT)/VA-37 board → fully clockwise
3. When the portion A of the monitor is colored, turn RV47 (CLAMP SENSE)/VA-37 board counterclockwise slowly until it is not colored.

Monitor Screen

Note; After this adjustment is completed, set the GAIN selector (side panel) to "0".

4-6-4. Auto Iris Adjustment

Object; Gray Scale Chart

Equipment; Waveform Monitor

Preparation; • IRIS AUTO/MANU selector (lens) → "AUTO"

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. The iris control operation is controlled by mixing the peak level of the video signal with the average of it. That mixing ratio can be set by adjusting RV4 (IRIS MODE)/PS-129 board. Set the mode according to the users' request. Normally set it at the center.

3. Adjust RV5 (IRIS SET)/PS-129 board so that the white level at TEST OUT terminal is $0.7 \pm 0.01V_{p-p}$.

4-6-5. LOW VIDEO Adjustment

Object; Gray Scale Chart

Equipment; Waveform Monitor

Preparation; ENC/REGI selector (side panel) → "ENC"

1. Adjust the zoom control so that the gray scale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level at TEST OUT terminal is $280 \pm 10\text{mV}$.

3. Turn RV2 (LOW VIDEO)/AT-42 board from the left-most position clockwise slowly until the "LOW LIGHT" is displayed on the VF screen.

VF Screen

4-6-6. Character Size Adjustment

Preparation; • OUTPUT/DCC selector (side panel) →

"BARS/OFF"

• ENC/REGI selector (side panel) → "ENC"

• S1 (CHECK)/AT-42 board → "ON"

1. Adjust RV1 (CHR SIZE)/AT-42 board so that the characters are displayed in the center of VF screen.

VF Screen

Note; After this adjustment is completed, set the S1 (CHECK)/AT-42 board to "OFF (OPEN)"

4-7. VIEWFINDER SYSTEM ADJUSTMENT

Note; Be sure to adjust the camera completely, or the following adjustments will become invalid.

Preparation; • Set the power switch of AC Adaptor (AC-500CE or CMA-8CE) to "OFF".
• Remove the viewfinder from the camera and remove the VF cover.

• Turn the component side of VF-26 board upwards for adjustments as shown below.

• Set the power switch of AC Adaptor (AC-500CE or CMA-8CE) to "ON".

• Install the viewfinder to be turned upside down on the camera.

4-7-1. Vertical Hold Adjustment

Equipment; Oscilloscope

Preparation; • Pull the EN-41P board out of the camera.
• Set \odot RV9 (V SIZE)/VF-26 board to the mechanical center unless it is marked.

Test Point; TP4 (GND:E1)/VF-26 board

Adj. Point; \odot RV7 (V HOLD)/VF-26 board

Spec.; $A = 25.6 \pm 0.5 \text{ mS}$

Note; After this adjustment is completed, insert the EN-41P board into the camera.

4-7-2. Flyback Pulse Width Adjustment

Note; Perform this adjustment only when the T2 (FLYBACK)/VF-26 board is replaced.

Equipment; Oscilloscope (AC MODE)

Preparation; • BRIGHT control (viewfinder) →

\odot fully counterclockwise

• CONTR control (viewfinder) →

\odot fully counterclockwise

Test Point; TP3 (GND:E1)/VF-26 board

Spec.; $A = 10.1 \pm 0.3 \mu\text{S}$

1. When the flyback pulse width is out of the specification, replace C19/VF-26 board with a capacitor listed in the following table so that the pulse width meets the specification.

C19		
	1-136-306-11	0.0039 μF
	1-136-307-11	0.0043 μF
	1-136-287-11	0.0047 μF
	1-136-288-11	0.0051 μF
	1-136-289-11	0.0056 μF
	1-136-290-11	0.0062 μF
	1-136-291-11	0.0068 μF
	1-136-292-11	0.0075 μF
	1-136-293-11	0.0082 μF

4-7-3. Horizontal Hold Adjustment

Equipment; Waveform Monitor, Oscilloscope

Preparation; • Connect the CH1 of the oscilloscope to TP1 (GND:E1)/VF-26 board and CH2 to TP3 (GND:E1)/VF-26 board.
• Shoot the overall white pattern and adjust the iris control so that the white level at TEST OUT terminal is 100IRE.

Adj. Point; ① RV5 (H HOLD)/VF-26 board
Spec.;

Adjust so that the lower phase corresponds with the upper.

4-7-4. DC Balance Adjustment

Equipment; Oscilloscope (DC MODE)

Preparation; Set the iris control to "CLOSE".

Test Point; TP2 (GND:E1)/VF-26 board

Adj. Point; ① RV11 (DC BALANCE)/VF-26 board
Spec.; $A = 47 \pm 2V_{dc}$

4-7-5. BRIGHT SET Adjustment

Preparation; • Set the iris control to "CLOSE".

- BRIGHT control (viewfinder) → mechanical center
- CONTR control (viewfinder) → fully counterclockwise

1. Set ① RV2 (BRIGHT SET)/VF-26 board at the point where the raster just starts appearing.

4-7-6. Focus Adjustment

Note; 4-7-8. Picture Frame Adjustment and this adjustment affect each other. Repeat these adjustments until both specifications are satisfied.

Object; Resolution Chart

Equipment; Waveform Monitor

Preparation; • BRIGHT control (viewfinder) →

mechanical center

• CONTR control (viewfinder) →

↻ fully clockwise

• S5 (WHITE CLIP & KNEE)/PR-78 board →

"OFF"

• S1 (PEAKING)/VF-26 board → "OFF"

• ⚙ RV10 (SUB FOCUS)/VF-26 board →

↻ fully clockwise

1. Adjust the zoom control so that the resolution chart touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the peak level at TEST OUT terminal is 0.7V.
3. Adjust ⚙ RV3 (FOCUS)/VF-26 board so that the picture on the viewfinder is best focused.
4. S1 (PEAKING)/VF-26 board → "ON"
5. Adjust ⚙ RV10 (SUB FOCUS)/VF-26 board so that the picture on the viewfinder is best focused, then turn it clockwise at an angle of approx. 15°.

The best focusing point

6. Adjust ⚙ RV3 (FOCUS)/VF-26 board so that the picture on the viewfinder is best focused.

Note; After this adjustment is completed, set the S5 (WHITE CLIP & KNEE)/PR-78 board to "ON".

4-7-7. Deflection Yoke Tilt Adjustment

1. When the picture on the viewfinder tilts against the picture frame, loosen the deflection yoke fixing screw and turn the yoke for adjustment of inclination.
2. Tighten the fixing screw carefully.

VF Screen

VF-26 BOARD (COMPONENT SIDE)

4-7-8. Picture Frame Adjustment

Note; 4-7-6. Focus Adjustment and this adjustment affect each other.
Repeat these adjustments until both specifications are satisfied.

Object; Resolution Chart
Preparation; • Remove the eye cap from the viewfinder.
• BRIGHT control (viewfinder) → mechanical center
• CONTR control (viewfinder) → mechanical center
• S1 (PEAKING)/VF-26 board → "OFF"

1. Adjust the zoom control so that the resolution chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the centering magnet of the deflection coil so that the center of resolution chart is located at the center of VF screen.
3. Adjust Ⓐ RV1 (H SIZE)/VF-26 board so that the H size of resolution chart is underscanned by approx. 1 mm from the CRT picture frame.
4. Adjust Ⓑ RV8 (V SIZE)/VF-26 board so that the V size of resolution chart is underscanned by approx. 1 mm from the CRT picture frame.

VF Screen

5. Adjust Ⓒ RV6 (V LIN)/VF-26 board so that the distortion of each circle at the four corners of resolution chart is minimized.
6. Adjust the centering magnet of the deflection coil so that the resolution chart is located in the center of VF screen.
7. When the picture on the viewfinder tilts against the picture frame, perform 4-7-7. Deflection Yoke Tilt Adjustment.
8. Repeat Step 2 to Step 7 until the specifications are satisfied.

4-7-9. Audio Level Adjustment

Note; When the camera is connected to VTR (BVV-1/1A), this adjustment can not be performed. Adjust that in the camera stand alone.

Equipment; Oscilloscope, Audio Frequency Oscillator
Preparation; • AUDIO/FILTER switch (viewfinder) → "AUDIO"
• TALLY/ZEBRA ON/OFF switch (viewfinder) → "OFF"

Connection;

1. Adjust Ⓓ RV4 (AUDIO LEVEL)/VF-26 board so that ③ on the FILTER/AUDIO indication plate of the viewfinder lights up slightly when the sine-wave of 1kHz, 0.332Vp-p is fed to TP5 (GND:E1)/VF-26 board and ③ goes off when the sine-wave level is reduced to 0.328Vp-p.

4-7-10. Peaking level Adjustment

Object; Resolution Chart

Equipment; Waveform Monitor

Preparation; S1 (PEAKING)/VF-26 board → "ON"

1. Adjust the zoom control so that the resolution chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the peak level of the waveform at TEST OUT terminal is 0.7V.
3. Set the peak level on the VF screen according to the users' request by adjusting  RV12 (PEAKING LEVEL)/VF-26 board.

VF-26 BOARD (SOLDERING SIDE)

VF-26 BOARD (COMPONENT SIDE)

4-8. PARTIAL ADJUSTMENT

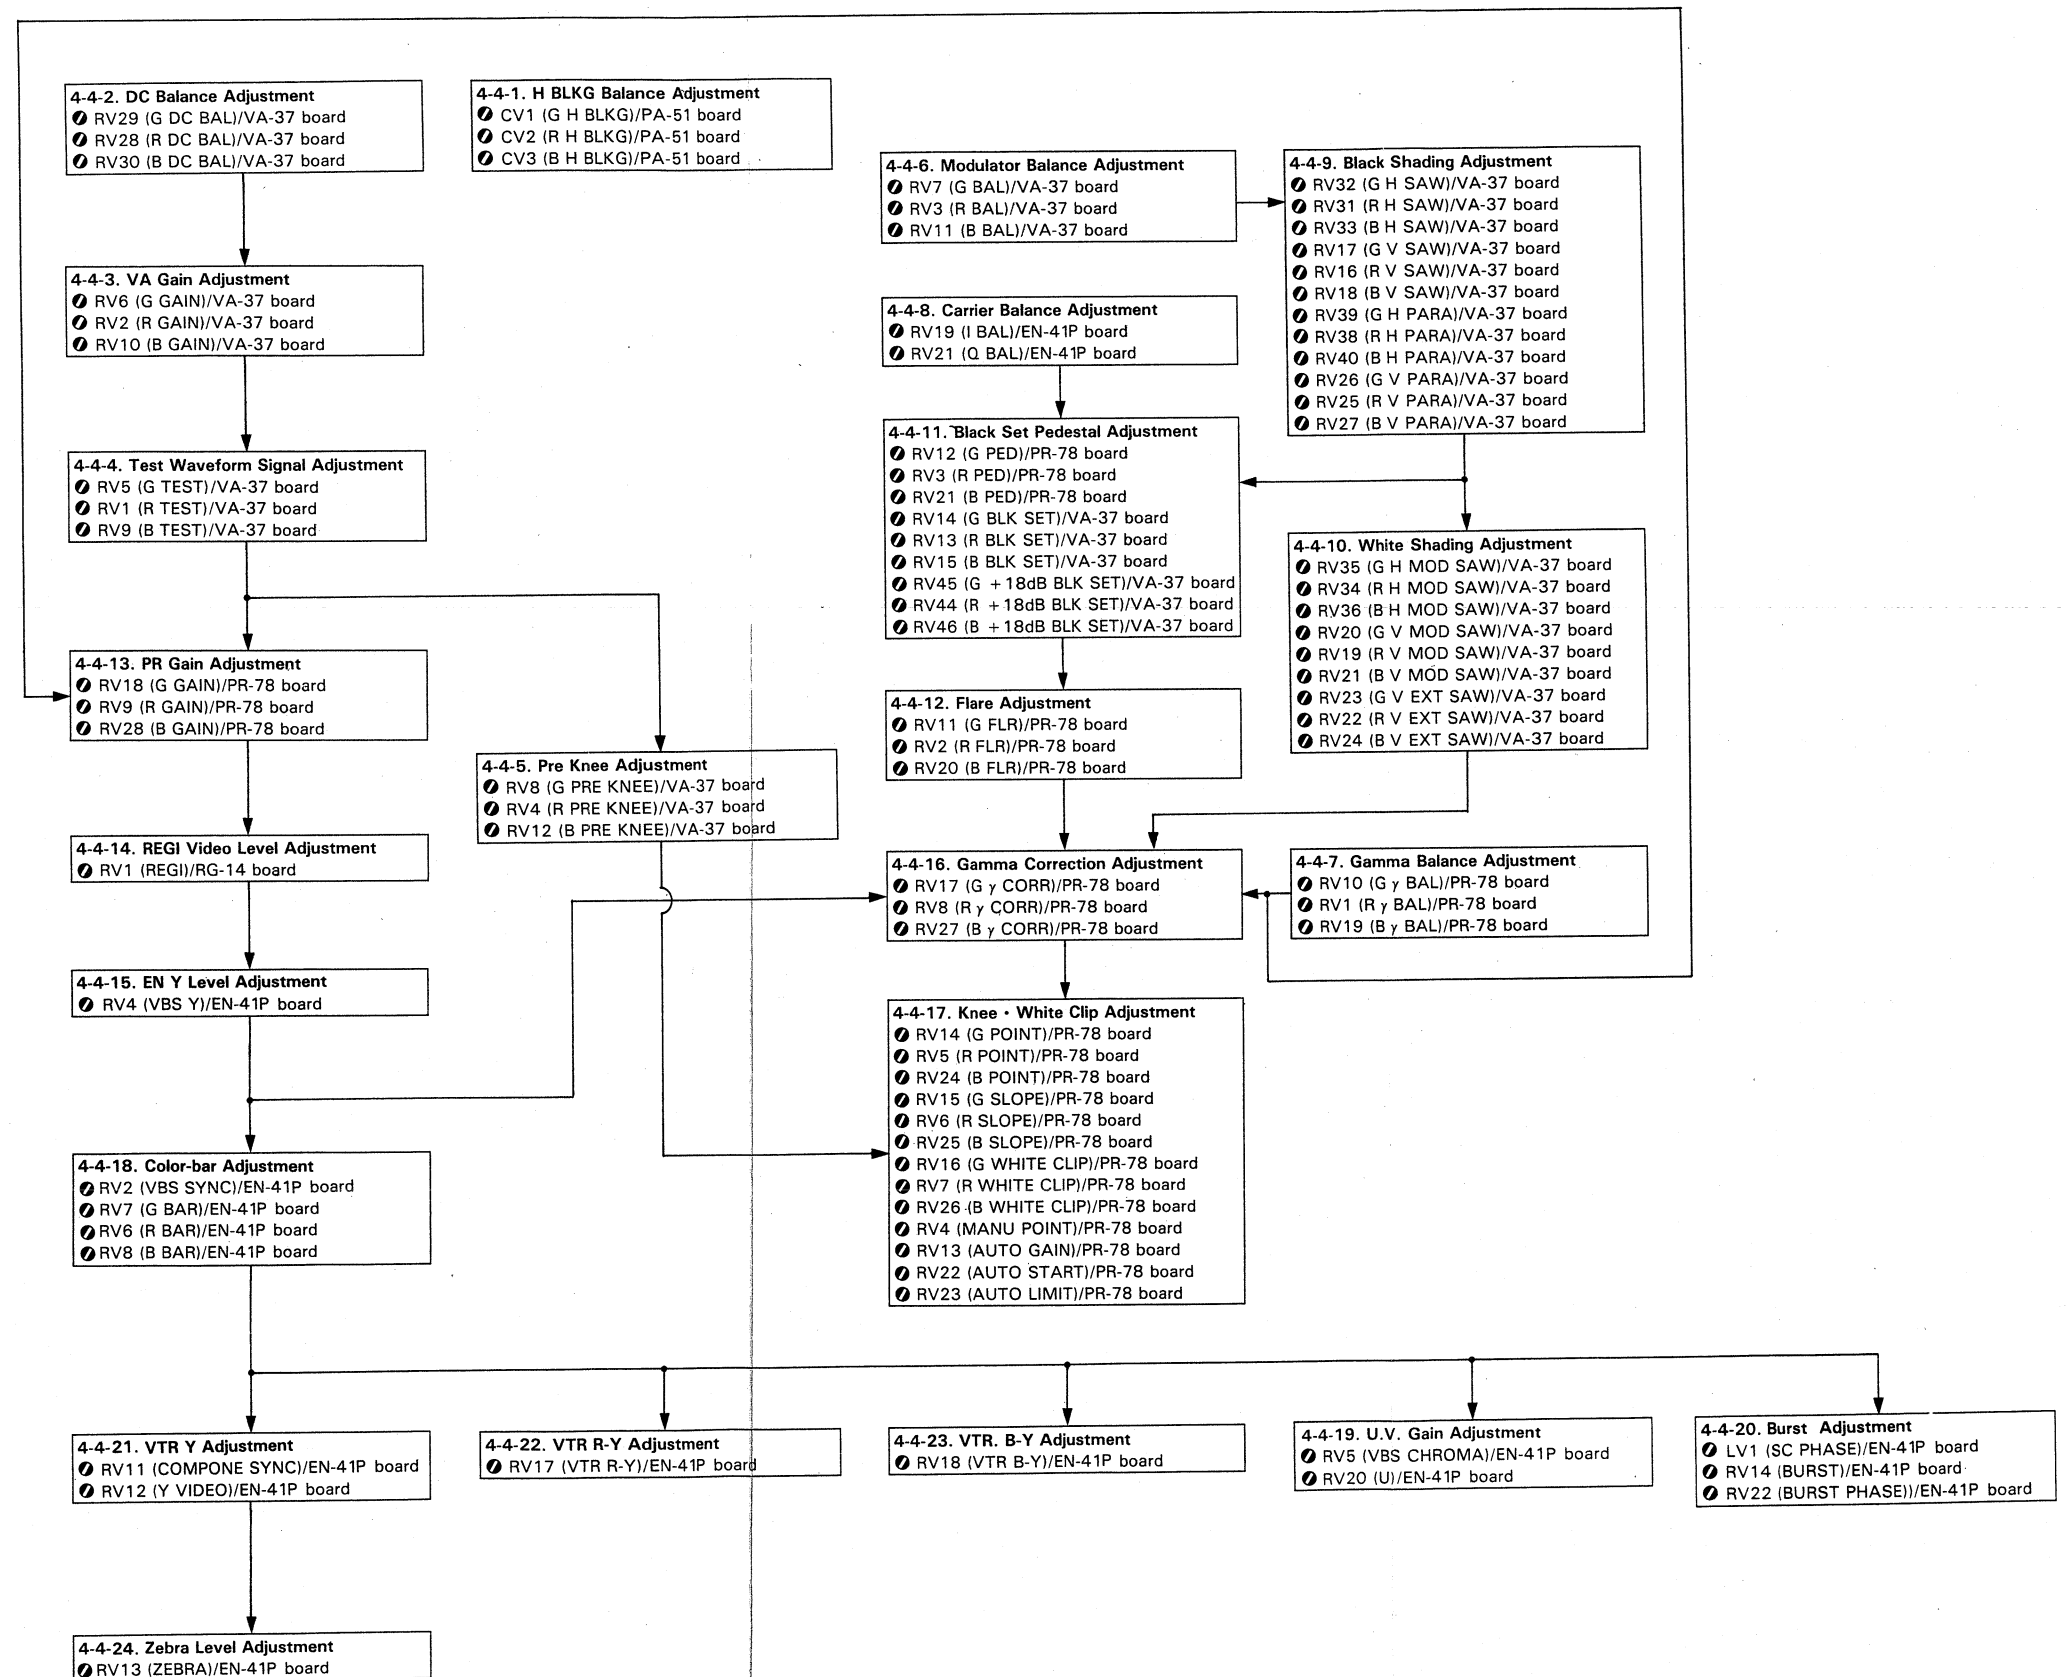

Before this adjustment, set the switches referring to 4-1-2. Connection and Initial Setting.

4-8-1. Partial adjustment of Video Signal System

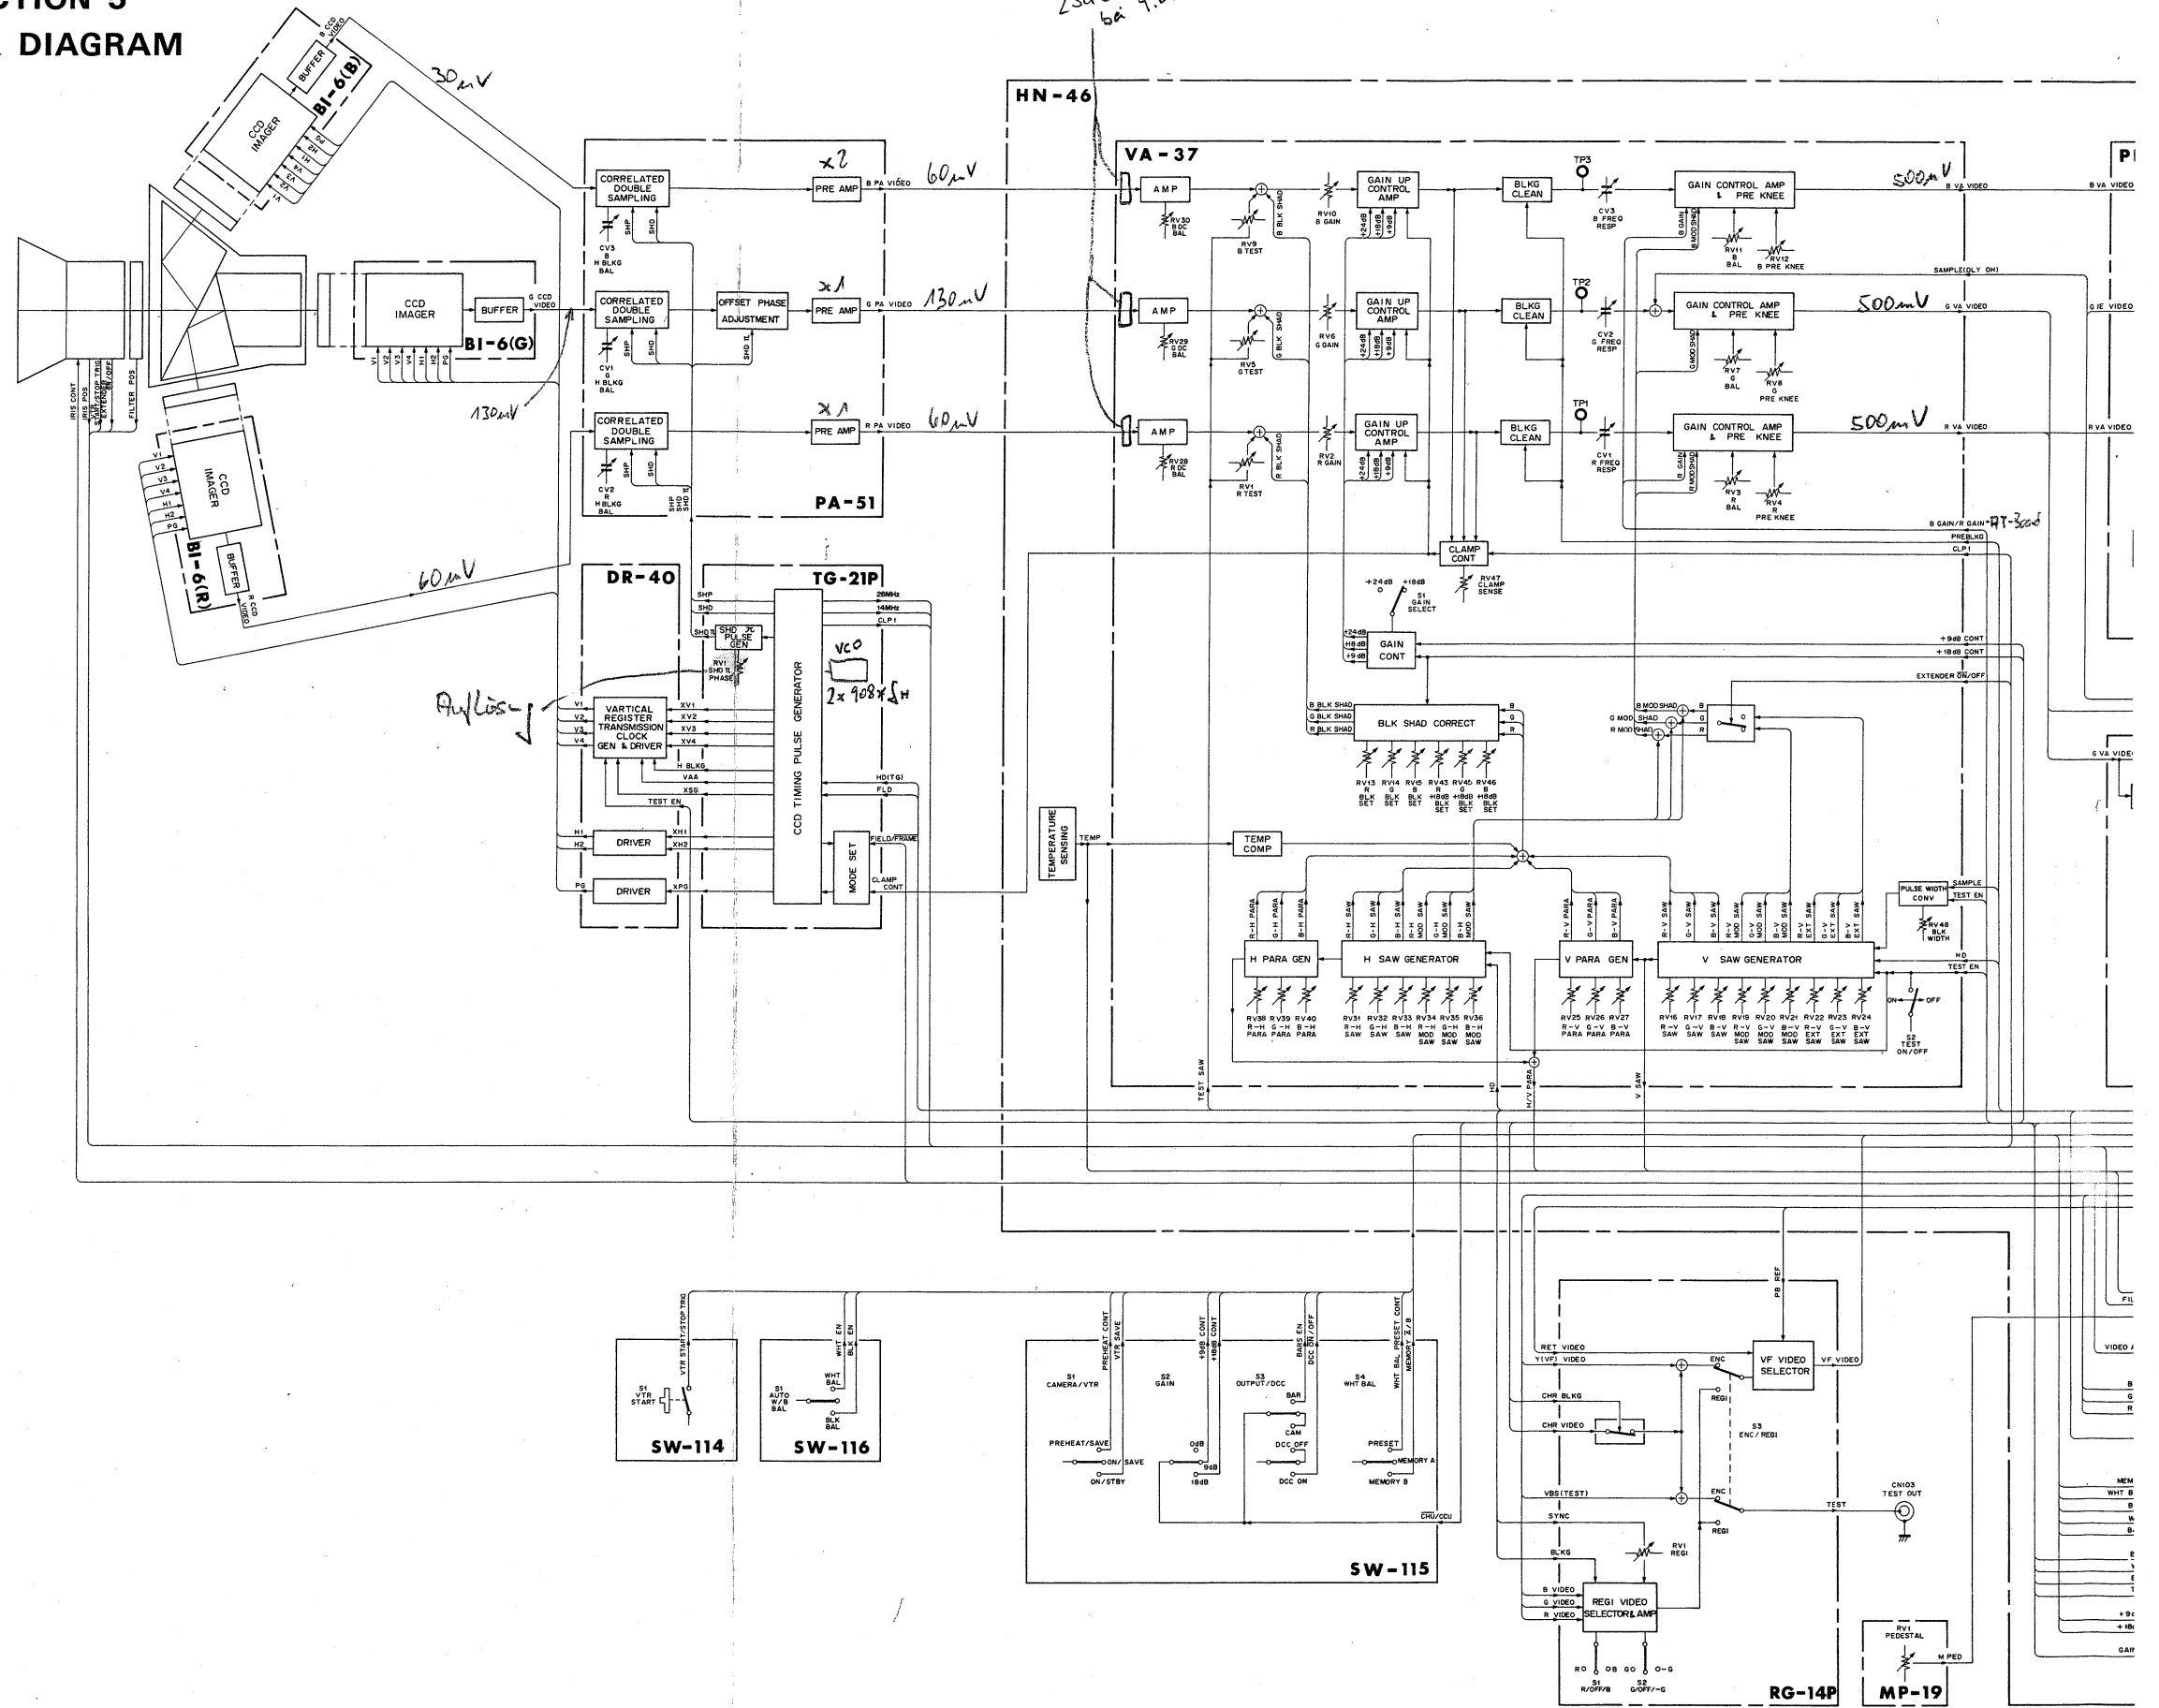

The relation between respective adjustments of the video signal system is described in the Fig. 4-1. Perform the adjustments in order as shown below.

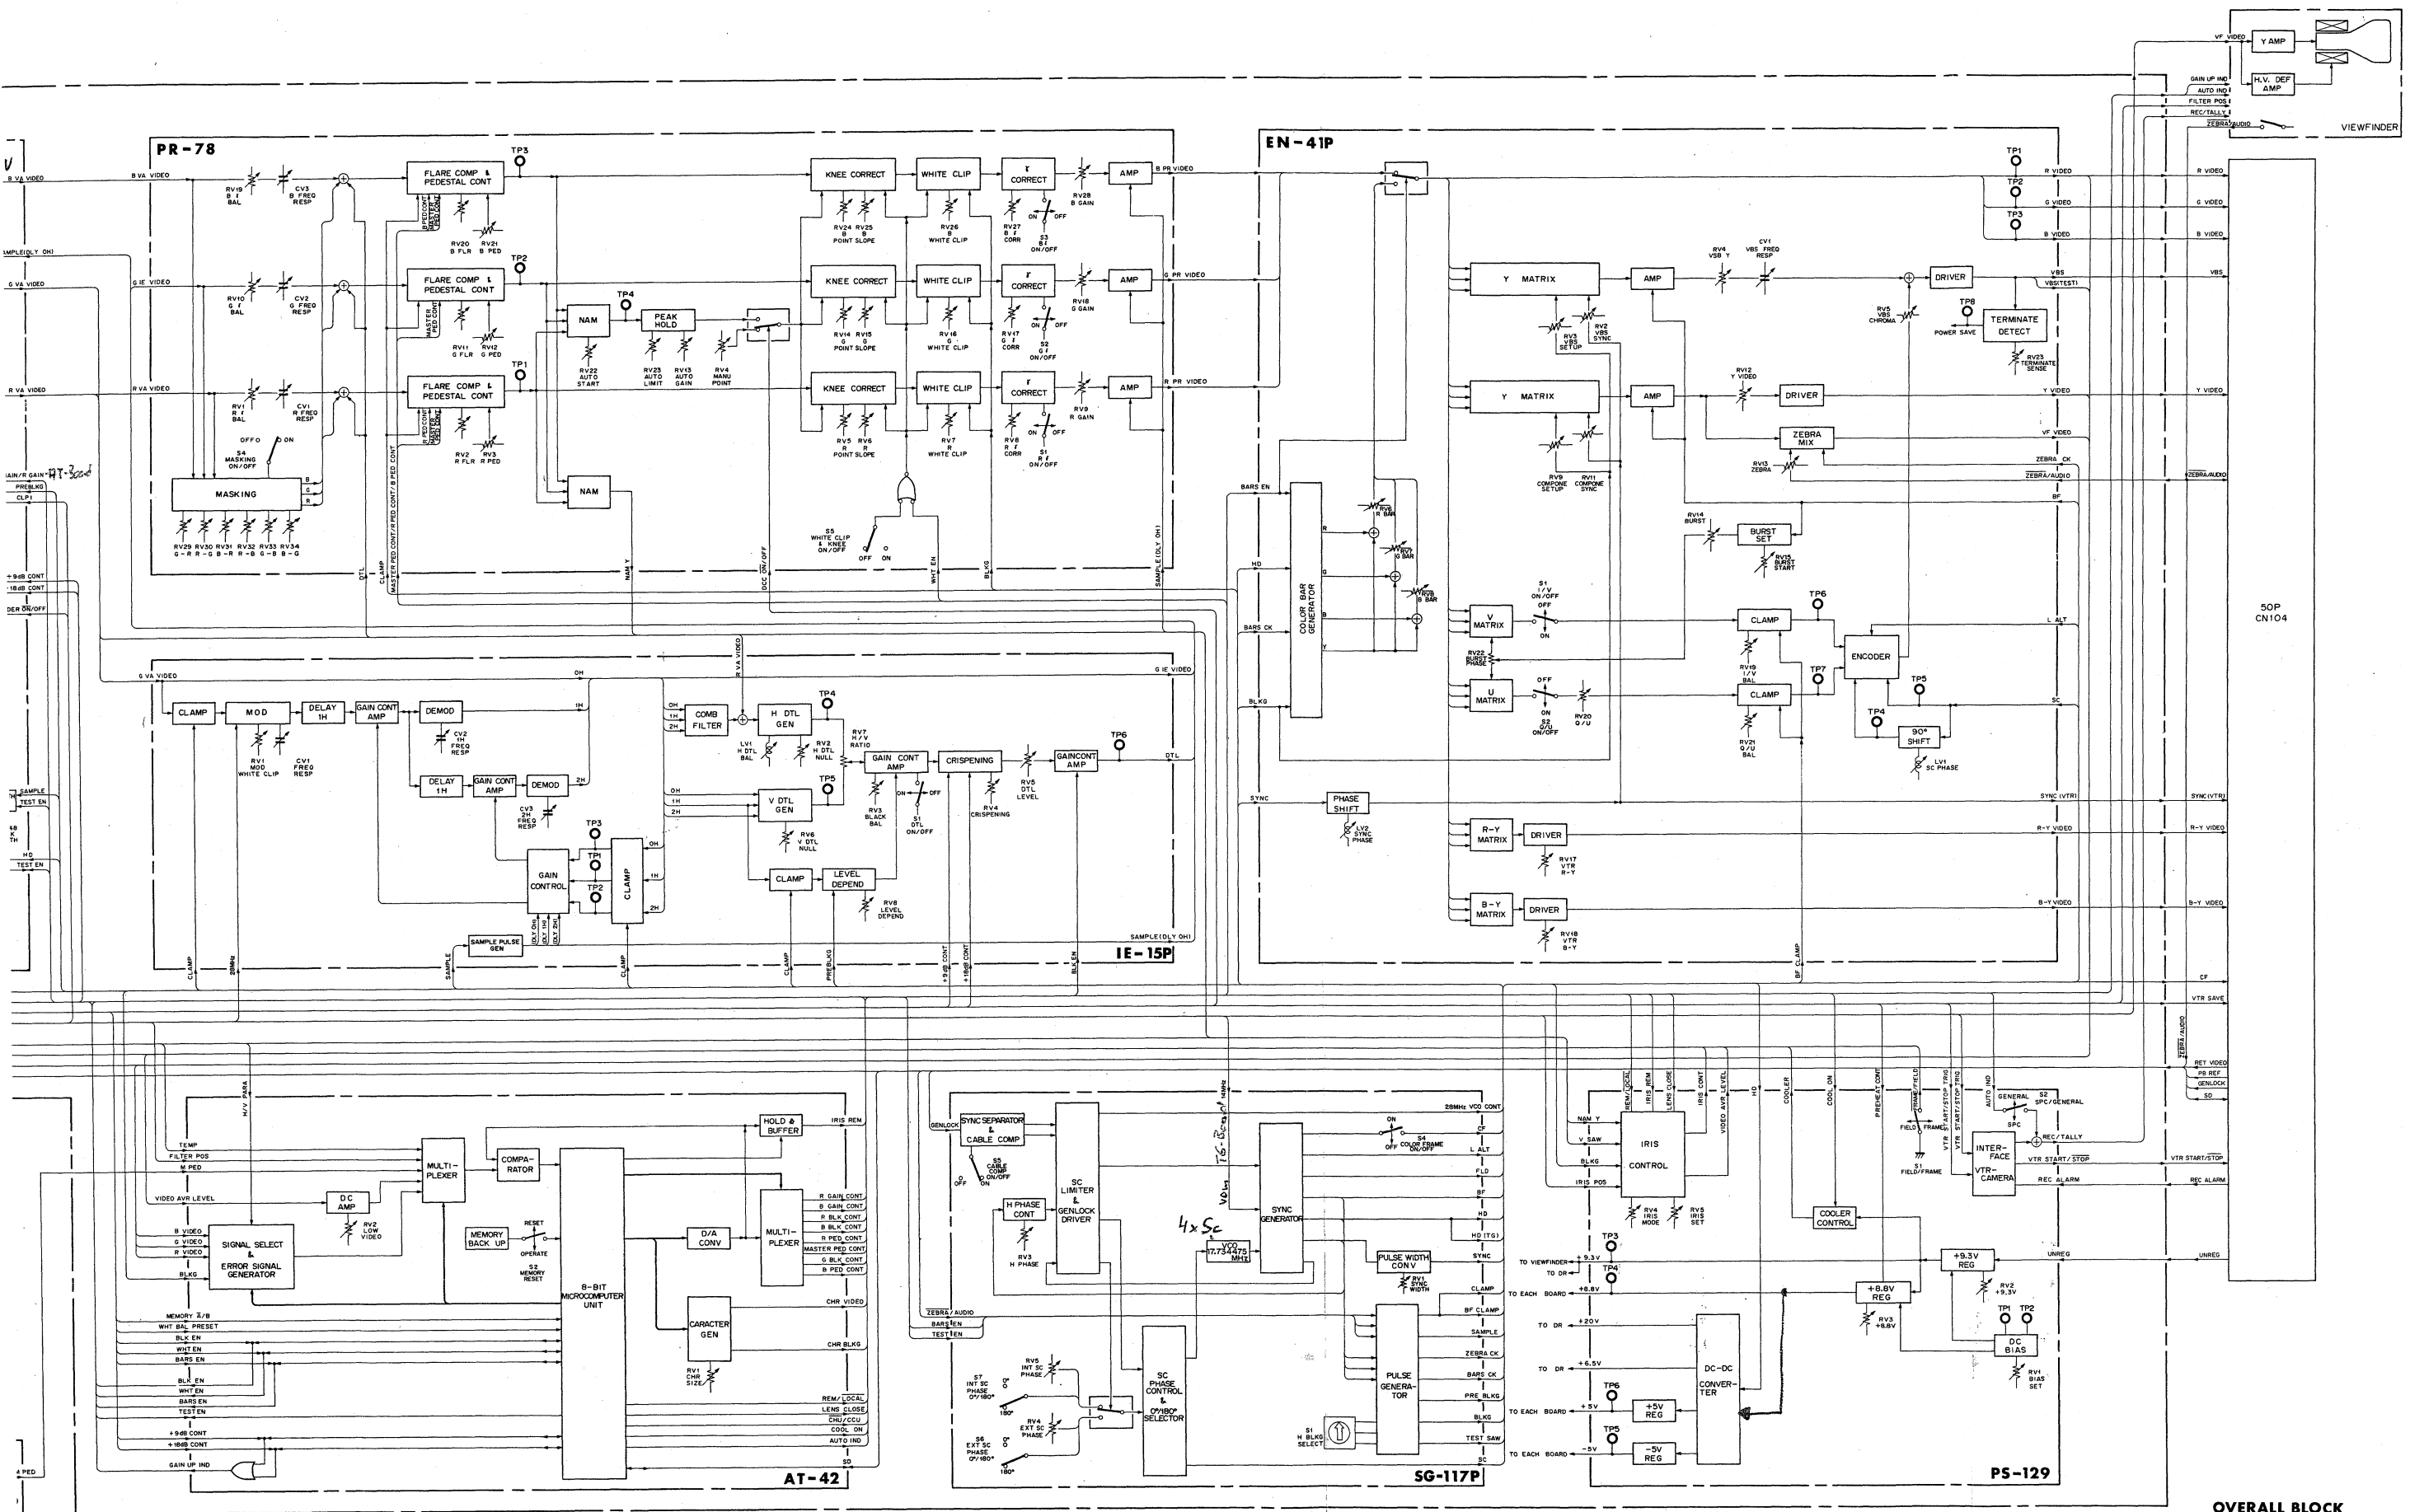

- * When performing the ADJUSTMENT B;
- (1) Check that the ADJUSTMENT A satisfies the specification.
(If not, it is necessary to readjust it.)
 - (2) Carry out the ADJUSTMENT B.
 - (3) Check that the ADJUSTMENT C satisfies the specification.
(If not, it is necessary to readjust it.)

SECTION 8

SPARE PARTS

8-1. PARTS INFORMATION

1. Safety Related Component Warning

Components identified by shading marked with **A** on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose parts numbers appear as shown in this manual or in service bulletins and service manual supplements published by Sony.

2. Replacement Parts supplied from Sony Parts Center will sometimes have different shape and outside view from the parts which actually in use. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts."

- This manual's exploded views and electrical spare parts lists are indicating the parts numbers of "the standardized genuine parts at present".
- Regarding engineering parts changes in our engineering department, refer Sony service bulletins and service manual supplements.

3. Printed Components in Bold-Face type on the exploded views and electrical spare parts list are normally stocked for replacement purposes. The remaining parts are not normally required for routine service work. Orders for parts not shown in Bold-Face type will be processed, but allow for additional delivery time.

4. Item with no part number and/or no description are not stocked because they are seldom required for routine service.

5. Abbreviation

REF. NO.	DESCRIPTION	REF. NO.	DESCRIPTION	REF. NO.	DESCRIPTION
C	CAPACITOR	IC	IC	RV	VARIABLE RESISTOR
CN	CONNECTOR	L	INDUCTOR	S	SWITCH
CV	VARIABLE CAPACITOR	LV	VARIABLE INDUCTOR	T	TRANSFORMER
D	DIODE	Q	TRANSISTOR	TH	THERMISTOR
DL	DELAY LINE	R	RESISTOR	X	OSCILLATOR
FL	FILTER	RP	RESISTOR BLOCK		

All capacitors are in micro farads unless otherwise specified.
 All inductors are in micro henries unless otherwise specified.
 All resistors are in ohms.

8-2. ELECTRICAL PARTS

Parts that are not listed in the "reference numbers order list" are shown in following table.
Reference numbers are omitted.

CAPACITOR
